ACKNOWLEDGEMENT:-

Global Marine Infratech Pvt Limited, Bhubaneswar(GMI) express their gratitude to **Shri Amitabh Verma, IAS, Chairman** for spending their valuable time and guidance for completing this Project of detailed hydrographic survey. GMI conveys their thanks to **Shri Pravir Pandey, Vice Chairman**. GMI also conveys our sincere thanks to various Government departments viz. **Govt. of Uttar Pradesh, Bihar and CWC Department** etc. for providing the data utilised in this report.

Shri Shrikant Mahiyaria, Member (Traffic) IWAI for his guidance and inspiration for this project survey. GMI is kind enough to thank **Cdr. P.K. Srivastava, Hydrographic Chief** and **Shri Rajiv Singhal, A.H.S.** for thier invaluable support and suggestions provided throughout the survey period. GMI is pleased to place on record our sincere thanks to other staff and officers of IWAI for their excellent support and co-operation throughout the survey period.

1.4 Google Image of Ghaghra River Route.....	10
1.5 Scope of work.....	11
Section-2: Methodology Adopted to undertake Study	12
2.1 Methodology Adopted in brief including Resources and Equipment used and calibration (2 pages).....	12
2.2 Description of Bench Marks (B.M.) / authentic Reference Level used, with photographs.....	13
2.3 Tidal Influence Zone and tidal variation in different stretches:.....	20
2.4 Methodology to fix Chart Datum/ Sounding Datum:.....	20
2.5 Yearly minimum and maximum Water Levels Average of 06 years minimum Water Levels to arrive at Chart Datum (CD) / Sounding Datum (SD):-	20
2.6 Transfer of Sounding Datum table for Tidal Rivers :-	21
2.7 Table indicataing tidal variation at different observation points (say at every 10KM):-.....	21
2.8 Salient features of Dam, Barrages, Weirs, Anicut, Locks, Aqueducts etc.:.....	23
2.9 Description of erected Bench mark Pillars in following format (details of erected BMs with photographs in Annexure):-	23
2.10 Description of erected Tide Gauges in following format (details of erected tide Gauges with photographs in Annexure):-.....	27
2.11 Chart Datum / Sounding Datum and Reductions details.....	29
2.12 High Flood Level (H.F.L.) at known gauge stations and cross-structures:-	31
2.13 Average Bed Slope:-	32
2.14 Details of Dam, Barrages, Weirs, Anicut, etc. in following formats w.r.t. MSL:-	33
2.15 Details of Locks in following formats:-	33
2.16 Details of Aqueducts in following formats:-	33
2.17 Details of existing Bridges and crossing over waterways in following format:-	33

2.18 Details of other cross structures, pipe-line, underwater cables:-	36
2.19 High Tension Lines/ Electric lines / Tele-communication lines in following format:-	36
2.20 Current meter and discharge details.....	37
2.21 (a) Soil sample locations	40
Bottom Sample Sediment Content Report.....	42
(b) Water sample locations	43
Water samples were collected at 0.5d depth at every 10 km interval. The report on sediment concentration are as follows:.....	43
Water Sample Sediment Content Report.....	45
Section-3: Description of Waterways	46
Section-4: Terminals.....	53
4.1 Details of Terminal survey carried out / proposed with Chainage, Lat/Long, Google images:-	53
4.2 Proposed terminal site shall have following considerations:-	57
4.3 Description of terminal as per above considerations:-	58
4.4 Details of Land use, owner etc.:..	58
Section -5: Fairway development:-.....	59
Section- 6: Conclusion	113
6.1 Description of Waterways.....	113
6.2 Condition of River bed	113
6.3 Modifications/ improvement Measures	114
Annexure- 1: Source and type of data collected from various agencies:-	114
Annexure- 2: Dredging volume calculated.....	114
Annexure -3: Details of collected water level of different gauge stations w.r.t MSL.....	168
Annexure -4: Details of bathymetric surveys carried out in following format:-.....	170
Annexure- 5: Bank Protection along the Bank:-	171
Annexure -6: Details of Features across the Bank:-.....	171
Annexure -7: Detailed methodology adopted for carrying out survey. Horizontal Control and Vertical Details Control:-	171
Establishment of Horizontal Control:-	171
Establishment of Vertical Control:-	172
Annexure- 8: Photographs of Equipment.....	172
Positioning System.....	172
Annexure -9: Bench Mark Forms:-.....	177

Section-1: Introductory Considerations

1.1 River course background Information, Historical Information, Origin, End.(one page)

Karnali or Ghaghara is a perennial trans-boundary river originating on the Tibetan Plateau near Lake Mansarovar. It cuts through the Himalayas in Nepal and joins the Sarda River at Brahmaghat in India. Together they form the Ghaghra River, a major left bank tributary of the Ganges. With a length of 507 kilometres (315 mi) it is the largest river in Nepal. The total length of Ghaghara River up to its confluence with the Ganges at Doriganj in Bihar is 1,080 kilometres (670 mi). It is the largest tributary of the Ganges by volume and the second longest tributary of the Ganges by length after Yamuna. It rises in the southern slopes of the Himalayas in Tibet, in the glaciers of Mapchachungo, at an elevation of about 3,962 metres (12,999 ft) above sea level. The river flows south through one of the most remote and least explored areas of Nepal as the Karnali River. The 202-kilometre (126 mi) Seti River drains the western part of the catchment and joins the Karnali River in Doti District north of Dundras hill. Another tributary, the 264-kilometre (164 mi) long Bheri, rises in the western part of Dhaulagiri Himalaya and drains the eastern part of the catchment, meeting the Karnali near Kuineghat in Surkhet. Cutting southward across the Siwalik Hills, it splits into two branches, the Geruwa on the left and Kauriala on the right near Chisapani to rejoin south of the Indian border and form the proper Ghaghara. Other tributaries originating in Nepal are the West Rapti, the Kali (or Mahakali) and the little Gandak. Another important tributary of Ghaghara in India is the Sarayu river, famous for the location of Ayodhya, the capital of Dasarath's Kingdom. It flows southeast through Uttar Pradesh and Bihar states to join the Ganges downstream of the town of Chhapra, after a course of 1,080 kilometres (670 mi). Sarayu river is stated to be synonymous with the modern Ghaghara river or as a tributary of it.

In India, the administrative districts in the Ghaghra catchment are Ambedkarnagar, Azamgarh, Barabanki, Basti, Ballia, Bahraich, Deoria, Faizabad, Gonda, Gorakhpur, Sant Kabir Nagar, Jaunpur, Kheri, Lakhimpur, Sitapur of Uttar Pradesh and Siwan district in Bihar.

Important towns in India include Akabarpur, Ayodhya Faizabad, Bahraich, Barabanki, Basti, Deoria, Barhalganj, Gonda, Gorakhpur, Khaililabad, Sitapur, Siddharthnagar, Saint Kabir Nagar, Kamhariya, Rajesultanpur and Tanda in Uttar Pradesh and Chapra, Siwan, and Sonepur in Bihar.

In India, water is diverted from the Karnali River at the Girijapur Barrage into the Sarda Sahayak Irrigation Scheme and the Sarayu Nahar Irrigation Scheme, which have command areas of 20,000 square kilometres (7,700 sq mi) and 12,000 square kilometres (4,600 sq mi) respectively. The combined annual irrigation demand of these two schemes is approximately 10,000 million cubic metres (8,100,000 acre·ft).

The Sarda Sahayak Irrigation Project uses the combined flows from the rivers Ghaghara and Sarda in the Girija Barrage built across the Ghaghara river below a catchment area of 45,500 square kilometres (17,600 sq mi). This barrage is situated about 9 kilometres (6 mi) downstream of Khatria Ghat Rly station and 16 kilometres (10 mi) from the international border to Nepal in Bahraich district. It is linked to the Lower Sarda Barrage built across the Sarda river, with a catchment area of 17,818 square kilometres (6,880 sq mi), about 28 kilometres (17 mi) northeast of Lakhimpur Kheri Rly station in Lakhimpur Kheri district. The link canal from Girija Barrage to the Sarda Barrage is 28 kilometres (17 mi) long and is designed to divert a discharge of 480 cubic metres per second (17,000 cu ft/s) from Gandak to Sarda river. The feeder channel taking off from the Lower Sarda Barrage is 258.8 kilometres (160.8 mi) long, feeds the five branches of Dariyabad, Barabani, Haideganj, Raei Bareil and Purva, and is designed to carry a discharge of 765 cubic metres per second (27,000 cu ft/s). The Sarda Sahayak feeder channel meets the Haidergarh branch at 171 kilometres (106 mi) and Raibareli branch at 187 kilometres (116 mi). The entire canal system is considered the largest in Asia and designed to provide irrigation to a Culturalable Command Area (CCA) of 20,000 square kilometres (7,700 sq mi) covering 14 districts in 168 blocks with a gross command area of 40,000 square kilometres (15,000 sq mi).

On account of high silt flows during the flood season, Sarda Sahayak supplies (from Karnali) are suspended for 100 days between June and October, when the Lower Sarda Canal (feeder canal) draws water from the Sarda River, which is then flooded.

In the past the Karnali River was considered to be attractive for the development of navigation right from the Indo-Nepal border till the confluence of this river and the Ganges. The lower reach of this river called the Ghaghra in India was used in the past for navigation by steamers. Apart from in the foothills of the Himalayas where most of the streams were simply fast-moving water throughout the greater part of the year and not navigable when flowing rapidly, most of the rivers with steadier currents had boats on them. The Ganges, the Ghaghra, the Yamuna, the Gomti, the Sharda and the Rapti were the most important navigable rivers in the Northwestern provinces and Oudh.

DETAILED HYDROGRAPHIC SURVEYS IN RIVER GHAGHRA (NW-40)

Many trade items such as timber, food grains, sugar, indigo, cotton seed, poppy seed and mustard seed were transported by boats. April, May and June were the most suitable months and were a busy trading period. Different kinds of cargo boats were used on the Ganges, the smaller ones were known as palwars, while the larger ones were known as katris. In the latter half of the 19th century when the railways came into existence, the significance of waterways as inland trade routes declined, as the railways were faster and safer. With the exception of eastern parts of Bengal where abundance of water in the natural network of channels sustained and continued to provide a suitable mode of transport of goods and people, the railways had almost entirely replaced the waterways as communication lines throughout the country by the end of the 19th century.

The possibilities for further extension of the steamer services to the north had also been explored in the past. The Central Water and Power Commission of the Government of India had carried out hydrographical survey of the Karnali River from the Bahramghat to the confluence of this river and the Ganges a distance of 446 kilometres (277 mi). This survey was done in the years 1943–53 to explore the possibility of improvement and extension of navigation on this river by powered crafts. These surveys revealed that there were only 5 shoals under 90 centimetres (35 in) at low water between Burhaj and Bahramghat a distance of about 300 kilometres (190 mi). The minimum depth was 75 centimetres (30 in). These depths were available without any river conservancy works. All other conditions of navigable channel such as the width and current of flow etc. were also found to be very favourable. The low water stage in this river is only for a short duration. There is a great urgency to carry out detailed study of the Karnali river to develop modern inland waterway by applying various channel improvement technologies.

1.2 Tributaries/Network of rivers/Basin

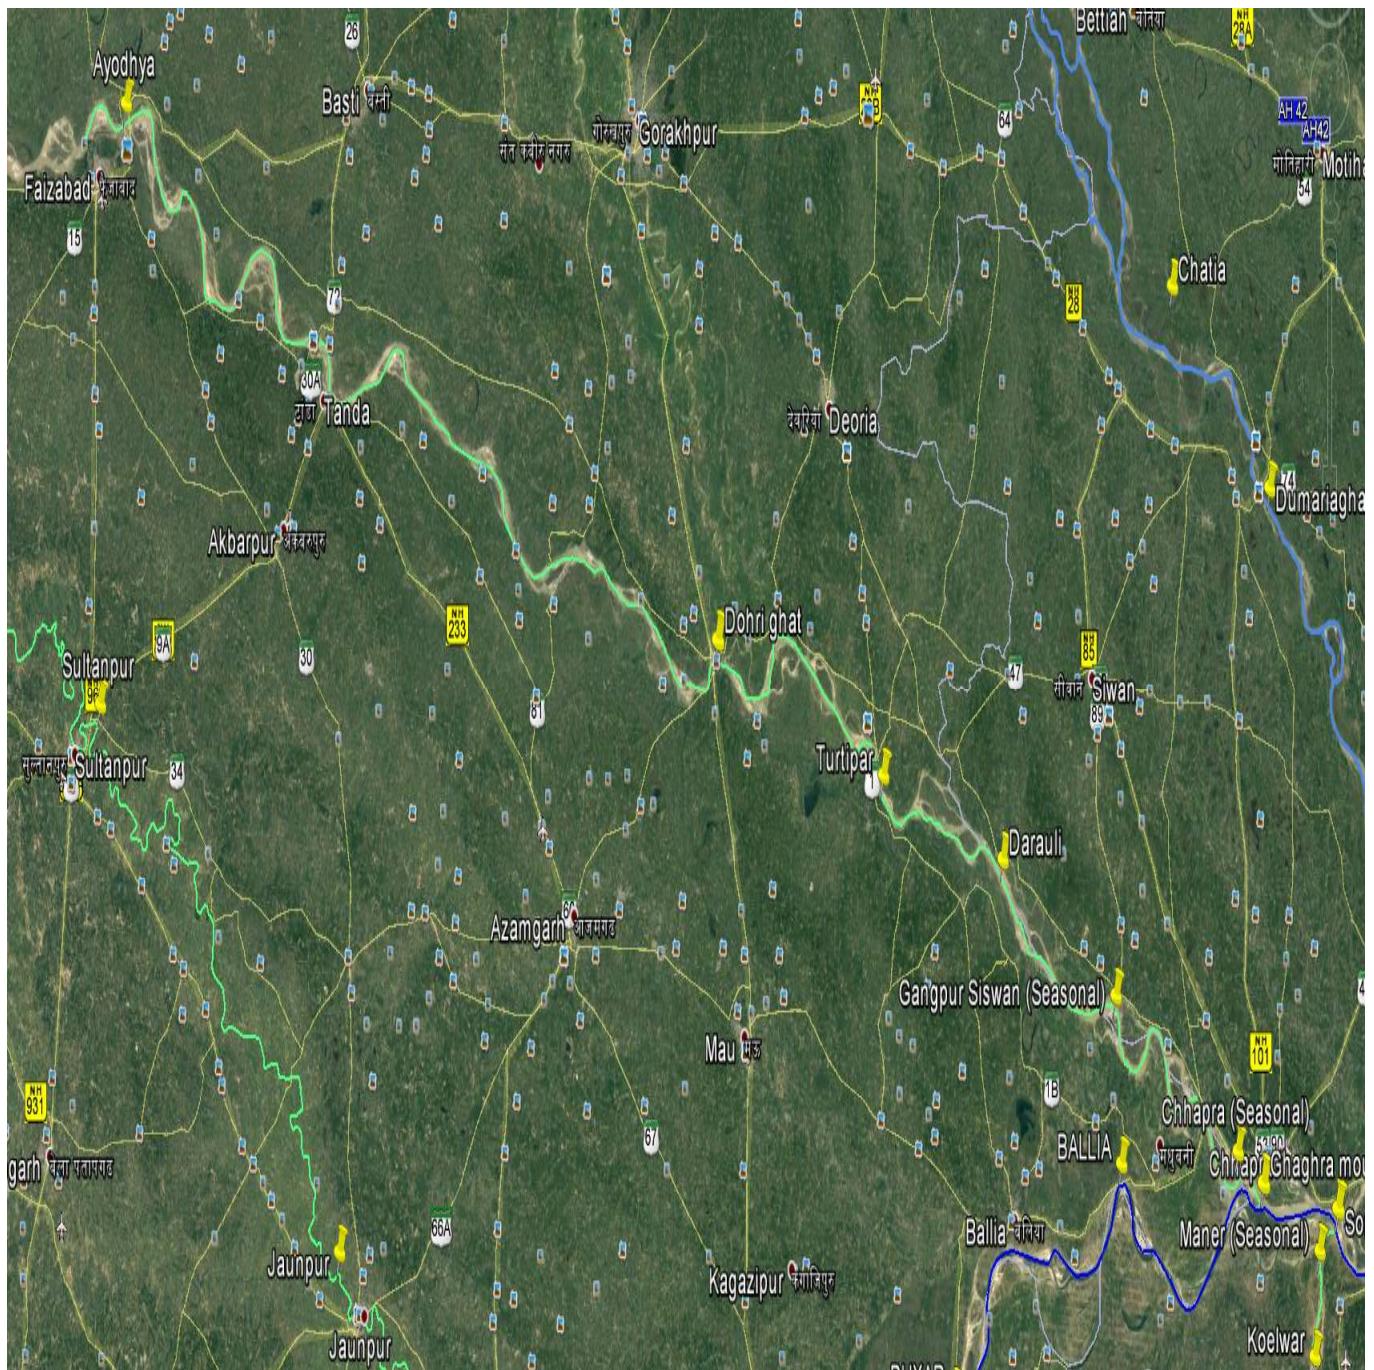

Left- Bheri, Sarju, Kuwana, Rapti, Little Gandak

Right-Seti, Dahawar, Sarda

1.3 State /District through which river passes

It flows southeast through Uttar Pradesh

and Bihar states to join the Ganges downstream of the town of Chhapra in Bihar .

1.4 Google Image of Ghaghra River Route.

1.5 Scope of work

M/s. Global Marine Infratech Pvt Ltd was awarded work order No. IWAI/HY/3NW/PH-I/2016/1 dated 05.04.2016 to carryout detailed Hydrographic Survey in river Ghaghra.

Awarded stretch:

353.6 kms length of the river from Faizabad at Lat 26°47'51"N, Lon 82°06'46"E to Ghaghra and Ganga river confluence at Manjhi Ghat Lat 25°44'13"N, Lon 84°42'03"E.

- Hydrographic Survey in river Ghaghra is to be conducted for 500 m width.
- Continuous soundings are to be taken by running the sounding boat at constant speed on the cross section, so as to get smooth contours. Intermediate line is to be run at bends, if the line spacing is more than 200 m.
- Shallow area depths to be measured with the help of Total Station/DGPS/RTK and required to submit csv files.
- Surveys in non-approachable area are to be informed and joint inspection to be carried out.
- The soundings are to be reduced to the chart datum/sounding datum established at every gauge stations.
- The current velocity and discharge at every 10 KM interval shall be observed once in a day during the survey period. Current velocity and discharge at every 10 KM interval are to be measured only once while carrying out survey in the river.
- Current meter measurement should be taken at 1m below water surface or 0.5d (if depth is 1 m), where d is measured depth of water and values indicated in the report along with position.
- Measurement of current velocity is to be measured for at least 15 minutes or as per listed calibration period of the equipment.
- Water and bottom sample are to be collected from the deepest route at every 10 KM interval.
- Collection of existing cargo details through proposed waterway, road and rail.
- Type of crops in different seasons and industries along the waterway.
- Historical and tourist places.
- Obstructions to the navigation and non-approachable areas.
- Photographs of all cross structures, gauges, obstructions- annotated with locations and chainage.
- Permanent structures located within this corridor.
- Collection of Topographical features.
- Survey chart is to be prepared on a scale of 1:1000 for Waterways width less than 100m. On a scale of 1:2000 for waterways width between 100m to 300m. On a scale of 1:5000 for waterways width between 300m to 500m and on a scale of 1:10000 for waterways width more than 500m.
- Contours of 0m, 1m, 2m, 5m, 10m are to be indicated in the charts with respect to chart datum/sounding datum.
- Dredging quantity is to be indicated in the report for per km longitudinal length of the canal/river.

Section-2: Methodology Adopted to undertake Study

2.1 Methodology Adopted in brief including Resources and Equipment used and calibration (2 pages).

The Bathymetric survey of river Ghaghra was commenced on **25th Apr, 2016** and completed on **18th July, 2016**. The area intended to be surveyed has been completely sounded as per the required specifications and availability of depths for movement of depth. The bathymetric survey was carried out using a small fiber boat. The sounding of the River was carried out at a cross section line spacing of 200 metres.

The survey was carried on WGS 84 Datum. The projection used was Transverse Mercator and the grid used was Universal Transverse Mercator Grid (Zone 44). Differential GPS signal corrections for the DGPS system onboard the vessel, were automatically obtained from the nearest DGLL Beacon(i.e. Krishnapatnam Port Light House) throughout the survey area.

HYPACK Ver. 2012 Hydrographic Survey Software developed by Coastal Oceanographical INC., USA was used for the data logging during the survey and for data processing thereafter.

The data logging during the survey was achieved by interfacing both the echo sounder and DGPS Receiver to the HYPACK software on a laptop/PC carried onboard the sounding boat. The entire system was supported by battery power and backed by an onboard generator supply. The position and depth data were logged in continuously during the survey, once every 500 millisecond. All digitally logged data were automatically stored in the assigned files. No significant difficulties were experienced in the operation of the digital surveying system during the survey.

Horizontal Control and Vertical Clearance.

The survey boat used for the survey operations throughout the project was positioned by the Differential Global Positioning System (DGPS). Differential corrections were received continuously from the nearest existing DGLL beacon which is capable of transmitting corrections up to range of 250 kilometres. The Hemisphere DGPS Receiver was used for positioning of the depths. The position correction details were received from the nearest DGLL Beacon at Krishnapatnam Port and position data were found to be in differential mode and in order.

**DETAILED HYDROGRAPHIC SURVEYS IN
RIVER GHAGHRA (NW-40)**

2.2 Description of Bench Marks (B.M.) / authentic Reference Level used, with photographs.

SI NO 40: GHAGHRA RIVER		
40/1	63 J	GTS Standard Bench Mark 1904 (Type P) at Fyzabad. It is situated in the compound of and east of PWD office, 23.9 metres and 28.8 metres respectively from North and south corners of same and 15.8 metres central arch of the building.
40/2	63 J	BOM on brick along N. Edge of brick flooring around Hanumanji temple on S edge of main road from Lucknow to Akbarpur in Fyzabad Town.
40/3	63 J	GTS o BM on brick on second step from bottom of stairs of front or North verandah of post and Telegraph office, Fyzabad.
40/4	63 J	(Type B) at Sarai Rasi. Embedded 0.6 metre below ground level, W of Sarai Rasi Village, 2.7 metres south-east of milestone No 7 from Fyzabad, 6.7 metrs from centre of Fyzabad-Sarai Rasi Road and 2.2 metres from an indicating pillar which bears 160 dg from the bench mark
40/5	63 J	B.OM near SE. Corner of an indicating pillar to type B bench mark at sarai Rasi
40/6	63 J	B o M on Cement platform of an ostagonal well, 26.9 metres south of SW corner of a masjid (Temporary mode) and about 40 metres N of cost - track may a bhikhi to tanda.
40/7	63 J	B o M on cement on F seat of N or front gate to Jeya Lal's garden on S Edge of cart-track from Maya bhikhi to Tonda.
40/8	63 J	B o M on cement, 1.2 metres from W. corner of the outer plinth of a masjid, 18.3 metres south of the centre of the cart-track from Maya bhikhi to Tanda, about 60 metres south -east of Rajghat toll chowki in Tanda Town
40/9	63 J	Standard Bench-mark (Type M) at Basti. It is situated in the compound of ad on W side of the inspection Bungalow. The distances and bearings to the surrounding objects are:- NW corner of the kitchen, attached to the bungalow, 7.3 mt and 84 dg, SW corner of the same, 11.9 mt and 142dg.
40/10	63 J	GTS o BM on top of standard Bench mark (Type M) at Munderwa. It is situated in the compound of PWD inspection bungalow. The distances and bearings of the surrounding objects are:- SE corner of the main building of inspection ungalow, 20 mt and 8 1/2dg SW corner of the same , 17.7mt and 320dg.
40/11	63 N	GTS o BM on top of standard Bench mark (Type M) at Khalabad. It is sitauted 13.1 mt S of the entrance to S or main veranda of the PWD Inspection Bunglow. The distance and bearings of the surrounding objects are:- SE corner of the main building of the inspection Bungalwo, 16 m and 51 dg; SW corner of the same, 15.9 m and 342 dg.
40/12	63 N	GTS o BM (Type B) at Khalilabad. Interred 0.6 mt below ground level, in the compound of PWD Inspection Bungalow. The distances and bearings of the surrounding objects are:- NE corner of the kitchen, attached to the bungalow, 5.1 mt and 162 1/2 dg, NW corner of the same, 5.8 mt and 244dg; centre of a pakka well, 17.3 mt and 29dg. A masonry reference pillar stands 2.7 m NNE of the bench mark

**DETAILED HYDROGRAPHIC SURVEYS IN
RIVER GHAGHRA (NW-40)**

SI NO 40: GHAGHRA RIVER		
40/13	63 N	GTS 1904 Standard bench Mark at Gorakhpur. It is situated in the compound of commissioner's court, W of W face of the building, 45.7 mt and 48.2 mt respectively from NW and Sw corners of it and 30.8 mt from centre of portion.
40/14	63 N	GTS o BM on E parapet of culvert on road to parcel office, E of Gorakhpur Railway station
40/15	63 N	(Type 'M') at Padrauna. Situated in NE corner of the premises of Inspection Bungalow, Padrauna. The bearing and distances to the surrounding objects are:- NE corner of the inspection house, 208dg and 22.0 metres; NW cornerof kitchen house, 161dg and 35.4 metres.
40/16	72 B	BoM on the brick floor of W veranda, under the 3rd window from NW corner along W. Flank of upper Primary School in Siswa-Buzurg area. The school is about 61 metres E. from the main Mairwa-Darauli Kachcha Road.
40/17	72 B	(Type M) at Darauli. Situated in NW corner of the compund of the Dak Bungalow. The distances and bearings to the surrounding objects are:- NE corner of the garage, 26.8 metres and 296dg; NW corner of the dak bungalow, 21.6 metres and 186dg; NE corner of the dak bungalow, 28.0 metres and 171dg.
40/18	72 C	B o M on brick on is portion of the parapet wall of Mahadev Rai's Wall, 12.2 metres NE of the centre of the Chapra - Darauli Road and 800 metres SW of Bishunpura Village. Subhata vilalge lies about 800 metres SW of the benchmark
40/19	72 C	(Type B) at Siswan. Consists of a brass bolt, 2.5 centimetres in diameter set in cement concrete interred 10.6 metre below ground level in SW corner of the compound of district Board Inspection Bungalow. Situated 23.2 metres WSW from the SW corner of inspectin Bungalow and 18.6 metres SSE from the Se corner of the Middle School Building. A reference pillar bearing the inscription reference pillor on its E face stands N of the bench mark B type BM adjoining to it.
40/20	72 C	(Type B) at Manjhi. Consists of a brass rod 2.5 centimetres in diameter fixed in cement concrete interred about 0.6 metre below ground level. Situated in the compound of Inspetion Bungalow of O I Railway, 11.9 metres N. from the centre of a pakka well and 36.3 metres N from the N. corner of Inspection bungalow. A reference pillar bearing the inscription B type BM on its SE. face stands adjoining and SW of the bench mark
40/21		(Type M) at Chapra. Situated 45.7 metres NW of a pakka well north of the circuit house and 55.2 metres NNW of the NW corner of railing of the Veranda surrounding the circuit House. The distance and beaing to the surounding objects are:- NW corner of the kitchen house, 51.5 metre and 128 dg; NW corner of the plinth of the circuit house, 55.2 metres and 179dg; W. Pillar of the main entrance to the circuit house about 143 metres and 30dg

2.3 Tidal Influence Zone and tidal variation in different stretches:-

There are no Tidal influences or effects found.

2.4 Methodology to fix Chart Datum/ Sounding Datum:-

IWAI had provided Sounding Datum at CWC Chhapra , CWC Siswan and Ayodhya on Ghaghra River. The same was used to arrive the Sounding Datum values at BM Pillars and at tide gauges.

2.5 Yearly minimum and maximum Water Levels Average of 06 years minimum Water Levels to arrive at Chart Datum (CD) / Sounding Datum (SD):-

Yearly minimum and maximum Water Levels.Average of 06 years minimum Water Levels to be used to arrive at Chart Datum (CD) / Sounding Datum (SD).FSL in case of Canals.10 years minimum and maximum data at Dam, Barrages, Weirs, Anicut, Locks, Aqueducts to be collected. Average of 10 years minimum Water level data is to take as SD. Maximum WL/Full Reservoir Level (MWL/FRL) as HFL. **Ponding limit** of Pond Level / Minimum Draw Down Level (MDDL) is also to be collected / observed / measured.

**DETAILED HYDROGRAPHIC SURVEYS IN
RIVER GHAGHRA (NW-40)**

S. NO .	R/C	Site Name	River name	CD	Warning Level	Danger Level	HFL	Date	HFL in last 20 yrs.	HFL to adopt

2.6 Transfer of Sounding Datum table for Tidal Rivers :-

NA

2.7 Table indicataing tidal variation at different observation points (say at every 10KM):-

As Tide poles have been erected at every 10 km ,we have observed water level from 06:00 hrs to 18:00 hrs throughout the survey. To find out tidal variation at different observation points (say at every 10 km) ,we have taken the difference between lowest and highest water level reading .

Tide pole #	Chainage (km)	Tidal variation (m)	Remarks

Section-3: Description of Waterways

➤ **Chainage 0.000 to 48.0 (Zone 45):**

The maximum width of the river is one kilometre and minimum width is eight hundred meters. There are three in numbers bridges in this stretch, one in number concrete road bridge at chainage 17.44, two in numbers railway bridges, one is completed and another one is under construction at chainage 18.99 and 18.98 respectively. The River Ganga is connected at chainage 6.0 in this stretch. There is no High Tension Line (HTL) crossing the stretch. Sand Chur is used for agriculture purpose. The major crops are Cucumber and watermelon. Zone 45 falls in this stretch.

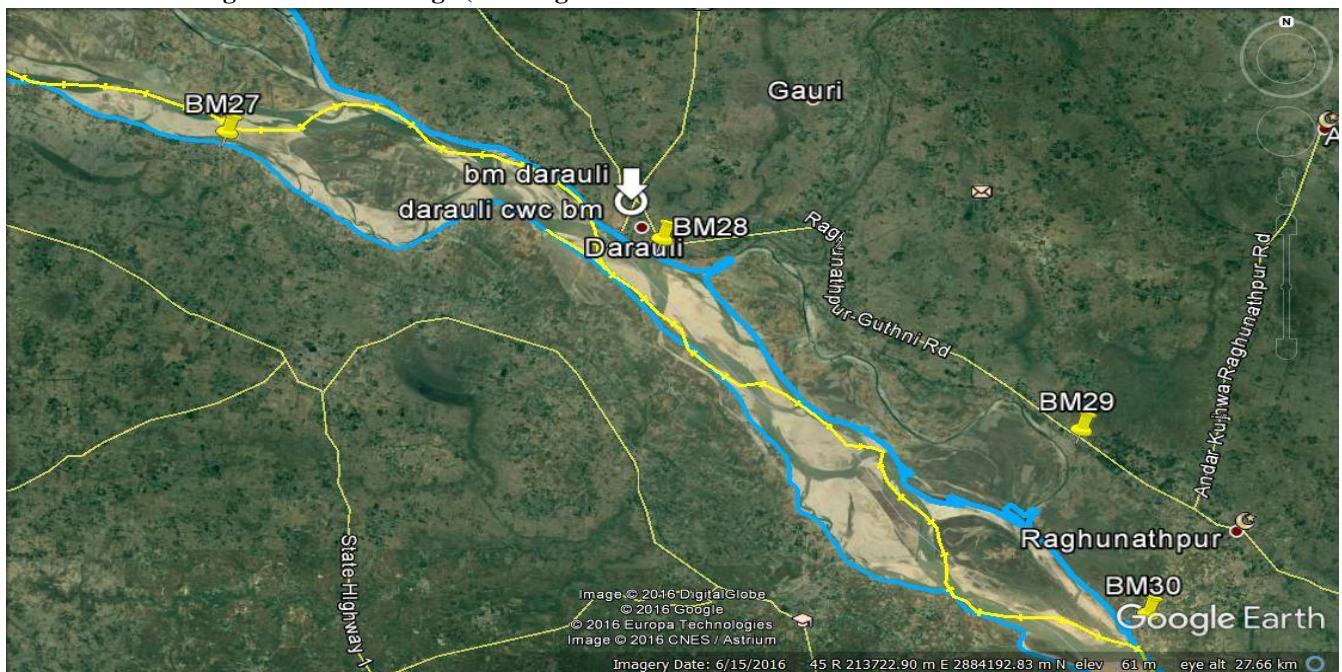

Google Image From Enai village , chappra to Narhan Village

➤ **Chainage 48.0 to 100.351:**

The maximum width of the stretch is fifteen hundred meters and minimum is one kilometre. There is one in numbers pipe bridge at chainage 83.36. No High Tension Line (HTL) crossing the river. Sand Chur is used for agriculture purpose. The major crops are Cucumber and watermelon. Zone 45 ends at Chainage 100.351.

From .Narhan village.toKathada village (Chainage 68.000km to 97.000 km

**Chainage 100.351 to 180.0:**

The maximum width of the canal is eighty metres and minimum is thirty metres. There are five in numbers bridges found in this stretch out of them three in numbers are concrete road bridge, two in numbers are completed and one in number is under construction at chainage 113.44 near Trutipar, 135.12 near Barhaj and 160.65 near Doharighat respectively. One in number pipe bridge at chainage 134.43 near Barhaj and one in number railway bridge at chainage 111.53 near Trutipar. Two in numbers High Tension Line (HTL) crossing the river. It is noticed that, near Doharighat bridge there is a Graveyard. Also birds like Sarus crane were seen in this stretch. Beyond both the banks, accessible road is available up to 10 kilometers. The main activity on land in both banks is agriculture. The major crops are Cucumber and watermelon. Zone 44 starts from this stretch.

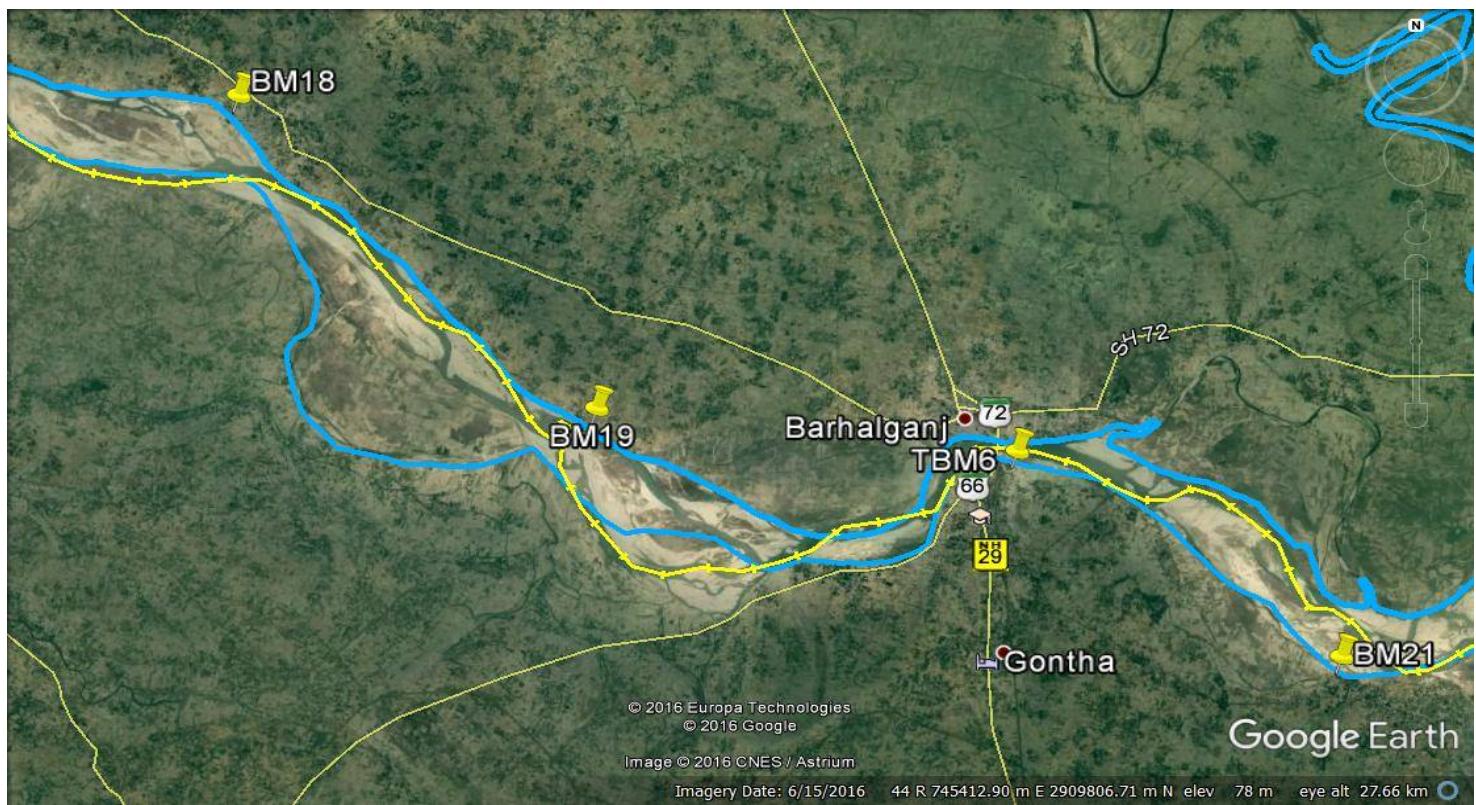

From .Kathada village.toNagpur village (Chainage 97.000km to 126.000 km)

From .Nagpur village to Rasulpur village (Chainage 126.000 km to 156.000 km)

From Rasulpur village to Gola Bazar (Chainage 156.000 km to 188.000 km)

➤ **Chainage 180.0 to 263.0:**

The maximum width of the canal is two kilometers and minimum is one kilometer. There are three in numbers bridges in this stretch out of them two are concrete bridges at chainage 212.77 and 226.52 respectively. The bridge at chainage 212.77 near Kamharia is under construction. The bridge at chainage 226.52 near Birhar ghat is completed. One in number pipe bridge exists at chainage 212.11 near Kamharia. There is one in number High Tension Line (HTL) at chainage 249.28 near Nawari Rampur village. One graveyard near Kamharia at chainage 212.77 is found on the bank of the river. The main activity on land in both banks is agriculture and major crops are watermelon, cucumber and vegetables.

From .Gola Bazar to Jainpur (Chainage 188.000 km to 219.000 km)

From Jainpu to Barge Nizam (Chainage 219.000 km to 249.000 km)

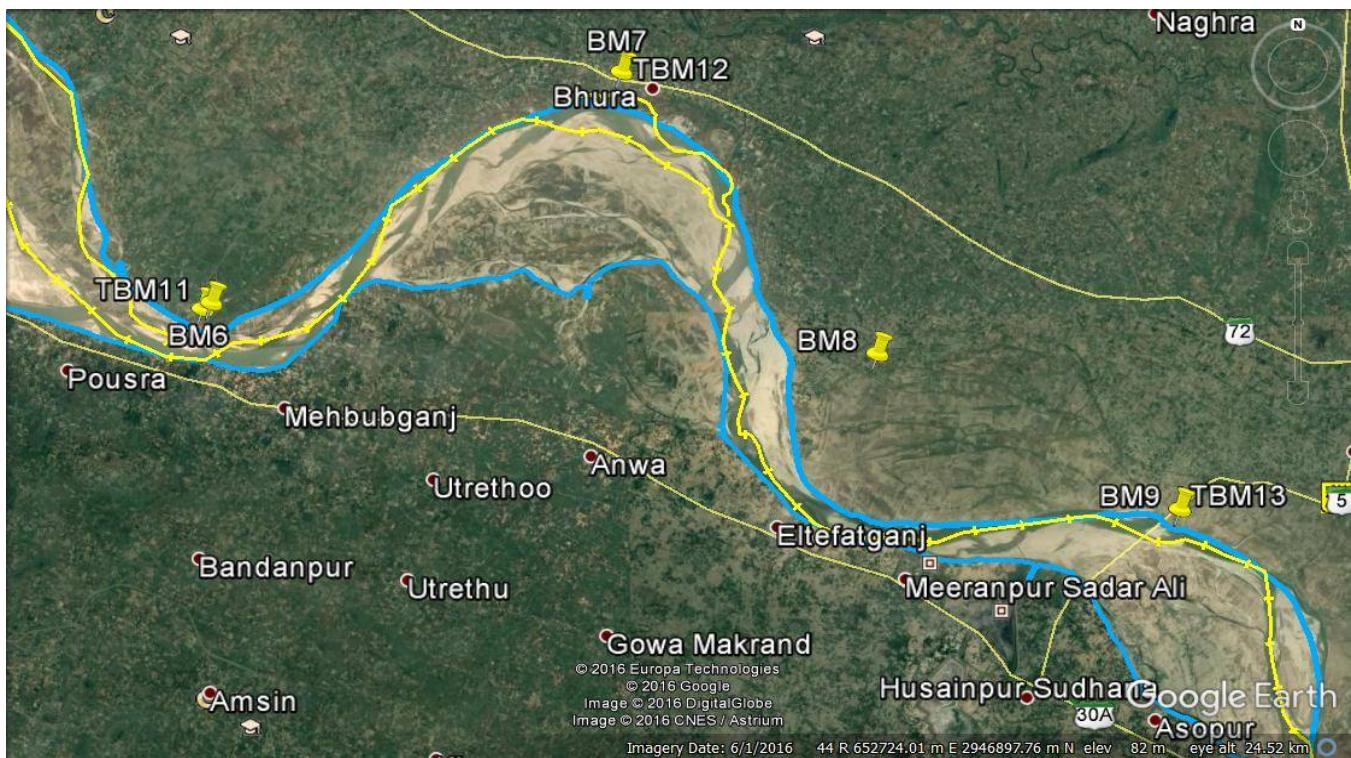

From Barge Nizam to Raipur (Chainage 249.000 km to 277.000 km)

➤ **Chainage 263.0 to 353.6:**

The maximum width of the stretch is fifteen hundred meters and minimum is five hundred metres. There are five in numbers bridges found in this stretch, four in numbers are concrete road bridges at chainage 270.96 near Tenda, 335.10, 335.90 and 336.48 near Ayoudhya respectively. One railway bridge at chainage 335.50 near Ayoudhya exists. There are four High Tension Line (HTL) crossing the river at chainage 299.90, 300.52, 300.68 near Mehaboob ganj and 336.39 near Ayoudhya. There is one Power Plant of NTPC falls at chainage 274.22 near Tenda. There is one graveyard at Saryu. Boating activities is also available for tourist in this stretch. Agriculture is the main livelihood.

From Raipur to Uniyar pur (Chainage 277.000 km to 306.000 km)

From Uniyarpur to Kalyanpur (Chainage 306.000 km to 335.000 km)

From Kalyanpur to Guptar Faizabad (Chainage 335.000 km to 353.3.000 km)

Section-4: Terminals

TERMINAL-1 (AYODHYA) 210m × 140m

The proposed terminal is situated near Ayodhya bus stand on right bank of Ghaghra River at Ayodhya. It is proposed between Rly bridge and National high way 28 to facilitate better road communication and transportation .It will cover districts of Faizabad,Gonda,and basti as the North end of the bridge opens in to district Gonda. Districts of Sultanpur ,Bara Banki.Bahraich and Siddharth nagar are falling under the secondary cathment area of Ayodhya. Requirement of Terminal area is 210m × 140m. The area is used for cultivation purpose which can be developed and better communication for transportation of man and material and ferry service can be established. Ayodhya being a tourist and religious place can be a better approach for visitors through water ways and will minimize road traffic problem.

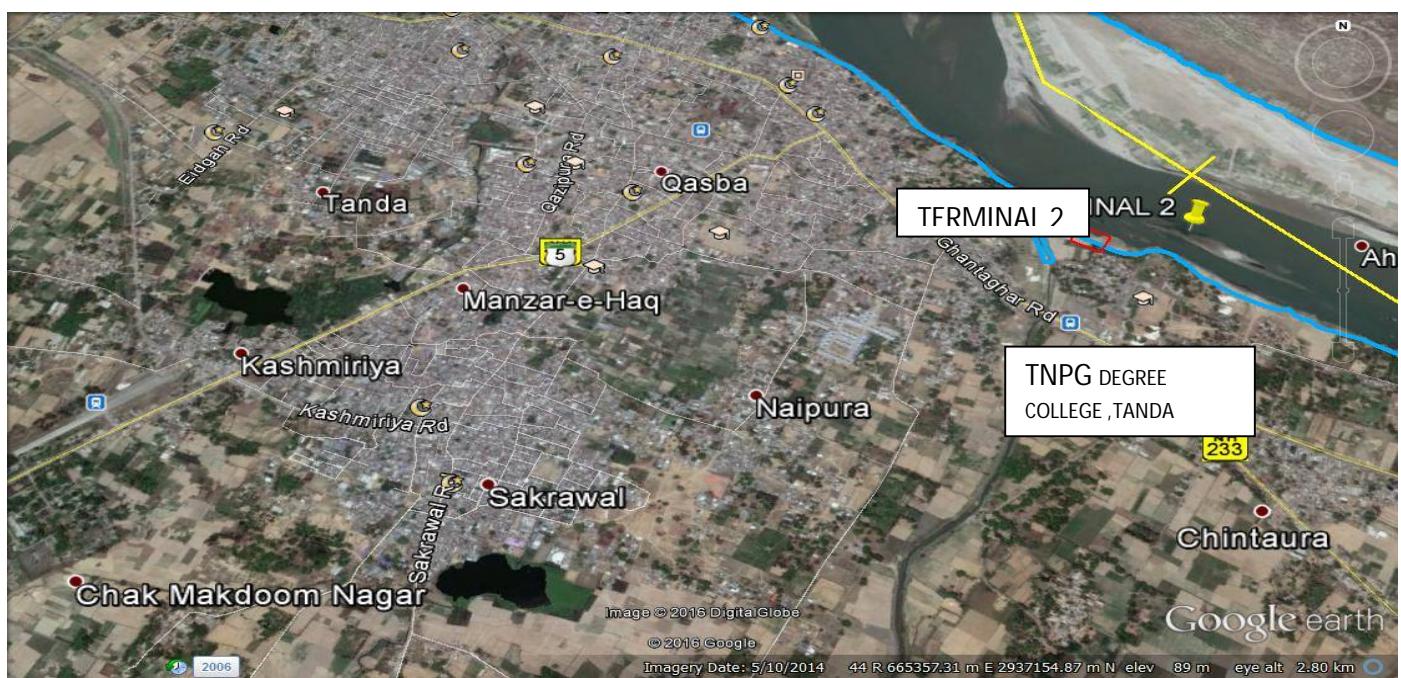

TERMINAL 2(TANDA) 85m × 70m

The proposed Terminal 2 at Mahirpur by IWAI may lead to more expensive, as the area is full of sand. As per survey done and availability of flow of water the same terminal can be developed on right bank of Ghaghra river beside TNPG DEGREE COLLEGE at TANDA, which can be connected to NH232, NH233, SH30A, TANDA RLY STATION, and the area is densely populated, also a place where a lot of educational institutions are present, which can be a proper place for ferry services. Tanda is the main business place in this locality.

TERMINAL 2 AT MAHIRPUR PROPOSED BY IWAI (Not suitable location)

TERMINAL 2 BESIDE TNPG DEGREE COLLEGE, TANDA PROPOSED BY GMI (Suitable location)

TERMINAL 3(DOHRIGHAT) 210m × 120m

The proposed terminal 3 at Dohrighat on right bank of Ghagra river after NH28 bridge is a suitable place for the development of the terminal. Size of the terminal is 210m × 120m. The area is open and wide for future development of roads and other utilities. It is connected to rail, road and is for better handling for commodities like cement, fertiliser, food grains and coal etc. Dohrighat being at nearly center of ghagra river and being an open area can be developed as center point for control and management of waterways.

TERMINAL 4(TURTIPAR) 140m×130m

Proposed terminal 4 is on rt bank of Ghaghara river ,after Balia Deoria High way bridge .Rail way at Turtipur is near about and Balthara is at about 10 km .Proposed size is 140m×130m. The area is cultivated area and Turtipur village is the approximately 250m to 300 m from the bank. Terminal can be developed and can be a business centre for farmers and vegetable growers.

TERMINAL 4

TERMINAL 5 (MANJHIGHAT) 140m × 130m

The proposed terminal is on left bank of Ghaghara River between Rly bridge and Balia Chhapra NH 19 road. Manjhight is well connected to road and railway. The area is full of cultivation. It can be developed as export point of food corps and vegetables.

4.2 Proposed terminal site shall have following considerations:-

- a) Availability of suitable depths for vessel berthing
- b) Availability of land for construction of terminal and Warehouse
- c) Connectivity to hinterland
- d) Distance from city traffic limits
- e) Possibility of future expansion
- f) Possibility of new industrial setup along the river stretch in future

4.4 Details of Land use, owner etc.:-

The both side bank of the River Ghaghra used for cultivation. The Farmers are cultivated their crops with using this fertile land and grows a huge amount of crops every year. Besides, some portions of the land are surrounded by small industries and Forests. Though bolder pitching is found in some places, But in Recent times, the bank of the river has been worn away in some places for lack of trees. Sometimes, the land of the river has been changed into a heap of garbage. As a result, the river side becomes polluted land. In the Monsoon period, Flood and erosion has been affected both side of the river bank.

Section- 6: Conclusion

The aim of the survey undertakes a bathymetric survey, topographic survey, a collection of data on cargo movement, industry survey, tourism facilities etc., in the project area; prepare detailed hydrographic survey charts, topographic survey charts, and detailed project report.

6.1 Description of Waterways

The surveyed stretch of Ghaghra River (NW-40) is 353 km in length. This survey stretch starts from the Chhapra to Guptar, Faizabad. In the past the Karnali or Ghaghra River was considered to be attractive for the development of navigation right from the Indo-Nepal border till the confluence of this river and the Ganges. The lower reach of this river- called the Ghaghra in India- was used in the past for navigation by steamers. Apart from in the foothills of the Himalayas where most of the streams were simply fast-moving water throughout the greater part of the year and not navigable when flowing rapidly, most of the rivers with steadier currents had boats on them. The Ganges, the Ghaghra, the Yamuna, the Gomti, the Sharda and the Rapti were the most important navigable rivers in the Northwestern provinces and Oudh.

Many trade items such as timber, food grains, sugar, indigo, cotton seed, poppy seed and mustard seed were transported by boats. April, May and June were the most suitable months and were a busy trading period.

6.2 Condition of River bed

The river bed of Stretches is mainly sandy in nature. No prominent Dams and Barrages are present in the survey stretches. Fishing stakes available in the stretches at so many places.

**DETAILED HYDROGRAPHIC SURVEYS IN
RIVER GHAGHRA (NW-40)**

6.3 Modifications/ improvement Measures

The minimum depth was 75 centimeters (30 in). These depths were available without any river conservancy works. All other conditions of navigable channel such as the width and current of flow etc. were also found to be very favorable. The low water stage in this river is only for a short duration. As per Detailed Hydrographic Survey there are possibilities in the Ghaghra/ Karnali River to develop modern inland waterway by applying channel improvement technologies / dredging to develop class-III waterways (Depth-1.70M).

Annexure- 1: Source and type of data collected from various agencies:-

The Chart Datum value and HFL values were provided by the IWAI Staff. The Sounding Datum calculated with the help of IWAI Staff.

Annexure- 2: Dredging volume calculated

**DETAILED HYDROGRAPHIC SURVEYS IN
RIVER GHAGHRA (NW-40)**

Date of Survey	Chainage	
	From (km)	To (km)
5/6/2016	291.18	304.88
4/6/2016	305	315.62
3/6/2016	306.92	321.24
2/6/2016	318.69	329.44
1/6/2016	329.31	341.43
31-05-2016	341.57	353.6

Annexure- 5: Bank Protection along the Bank:-

During the monsoon season the floods in the region are very common, so for this reason some short and as well as long temporary embankments are needed in the both banks of the river.

Annexure -6: Details of Features across the Bank:-

The bank of the river includes villages, Ferry ghat, Irrigation canals and outlets, Rail Bridges, RCC Bridges and Forest etc. The both side river bank are highly protected by embankment and bolder pitching due to flood, erosion etc. The villagers are also situated near the bank side of the river. Recently different kinds of industries are also located near the bank side of the river.

Annexure -7: Detailed methodology adopted for carrying out survey. Horizontal Control and Vertical Details Control:-

Establishment of Horizontal Control:-

The Horizontal control for TOPO surveys: - High precision RTK DGPS in fix mode using UHF Radio Modem with IHO accuracy standards, with minimum 24 hours observations at some permanent platform/base.

The Horizontal control for Bathy surveys: -DGPS is receiving corrections from Beacons.

Establishment of Vertical Control:-

Vertical control from CWC Chappra is used for the entire survey work. Its value is 53.618 meter w.r.t. MSL has been considered for calculating the vertical levels. Total 36 no. BM was established along the 353.6 km of River. The Vertical datum is transferred from the One gauge to other by the Help of DGPS Baseline process. The 24 hour observation is done at Origin of survey. All other BM are extened keeping he Origin of Survey as Reference. After every 100 Km , 24 Hour observation are done keep the Vertical and Horizontal control error under limits.

Annexure- 8: Photographs of Equipment.

Positioning System

1 X Hemisphere R110 DGPS system

Navigation & Data Logging System

To provide on-line route guidance, log navigation data, provide QC of navigation data, etc. The system comprises the following equipment:

- 1 X DELL Laptop
- 1 X Hypack Ver 2012 Navigation & Data Logging Software
- 1 X Positioning & sensor interfaces
- Sufficient Paper Rolls

The survey was conducted in WGS-84 spheroid with no datum transformation.

Geodetic Parameters	
Spheroid	WGS-84
Datum Transformation	None
Semi-major axis (a)	6378137.0000 m
Semi-minor axis (b)	6356752.3142 m
Eccentricity	0.0818 191909 28906
Inverse flattening (1/f)	298.257223563
Projection Parameters	
Grid Projection	Universal Transverse Mercator
Central Meridian (CM)	87° East (Zone 45) 81° East (Zone 44)
Origin Latitude (False Lat)	0.0°
Hemisphere	North
False Easting (FE)	500000.0 m
False Northing (FN)	0.0 m
Scale Factor on CM	0.999600
Units	International Metres

Single Beam Echo Sounder System

1 X Bathy 500 dual frequency Echo sounder

1 X Dual frequency transducer 33kHz & 200 kHz, the lower the Frequency the more the penetration in the bed, Hence we require the bed for which we used 20khz + mounting bracket & base plate.

Current Meter

1 X FSI 2D ACM200DBAR

Calibration certificate attached as Annexure.

Water & Bottom Sampler

1 X Niskin Water Sampler

1 X Van Veen Grab

Topographic Survey

- 01 x Nikon Auto level with Levelling stave
- 03 x Auto Level with levelling stave and tripod
- 02 x Trimble SPS 855 RTK System with one Base and two Rovers

Above were used for conducting topographic survey at the GHAGHRA River.

Survey Vessel

A small inflatable boat size of 9'10" x 4'11" (3.00 x 1.50m) was used for collecting bathymetry data.

(Image: Survey Boat)

Annexure -9: Bench Mark Forms:-

BM Name	Lat	Long	Easting	Northing	MSL

Calibration certificate

Standard Product Certificate Report

S/N: 1992

1400 RT. 28A, CATAUMET, MA 02534-0315

20 NOV 2016

CERTIFICATE OF COMPLIANCE

This is to certify that the subject system has been electrically and mechanically tested and inspected in compliance to applicable drawings.

Subject system was produced in accordance with Quality procedures and practices at FSI.

PART # Description

2ACM-CBP-S 2DPCM 200DBAR

- Final Acceptance Test
- Compass Calibration
- Tilt Calibration
- Velocity Calibration
- Sea Temperature Calibration
- Certification of Instrument Functioning
