

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97

SUNDERBANS WATERWAYS

RIVER: SAPTAMUKHI RIVER (STATE OF WEST BENGAL)

HENRY ISLAND TO CHINTAMANIPUR (37.163 KM)

(Volume – I: Main Report)

(Volume – II: Drawings)

Submission Date: 26/03/2021

Inland Waterways Authority of India

FINAL DETAILED PROJECT REPORT

REVISION - 3

MARCH 2021

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
SUNDERBANS WATERWAYS
RIVER: SAPTAMUKHI RIVER (STATE OF WEST BENGAL)
HENRY ISLAND TO CHINTAMANIPUR (37.163 KM)
(Volume – I: Main Report)
(Volume – II: Drawings)
Submission Date: 26/03/2021**

Project: Consultancy Services for preparation of Two Stage Detailed Project Report (DPR) of Cluster 1 National Waterways
Owner: IWAI, Ministry of Shipping
Consultant: Egis India Consulting Engineers

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

ACKNOWLEDGEMENT

*Egis India Consulting Engineers Pvt Ltd (EIPL) expresses their gratitude to **Dr. Amita Prasad, IAS, Chairperson**, for spending her valuable time and guidance for completing this "Final Detailed Project Report (DPR) of Saptamukhi River, Sunderbans Waterways (National Waterway 97)". EIPL would also like to thank **Shri Rajesh Kumar Pathak, Vice Chairman (I/C) and Member (Finance), Shri Ashutosh Gautam, Member (Technical) and Member (Traffic)(I/C)** for their valuable support during the execution of project.*

*EIPL wishes to express their gratitude to **Sh. S.V.K Reddy (Chief Engineer) and CDR. Mahendra Kumar (Hydrographic Chief)** for their guidance and inspiration for this project. EIPL would also like to thank **Sh. Rajiv Singhal, S.H.S., IWAI** for their invaluable support and suggestions provided throughout the project duration. EIPL is pleased to place on record their sincere thanks to other staff and officers of IWAI for their excellent support and co-operation throughout the project duration.*

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

TABLE OF CONTENTS

| | |
|---|-----------|
| ACKNOWLEDGEMENT | IV |
| SALIENT FEATURES OF SAPTAMUKHI RIVER (SUNDERBANS WATERWAYS (NW 97)) | 17 |
| EXECUTIVE SUMMARY | 21 |
| 1.0 INTRODUCTION | 27 |
| 1.1 Project Background and Summary of previous study | 27 |
| 1.2 Project Location / Details of Study Area | 28 |
| 1.3 Indo–Bangladesh Waterway Protocol Route | 29 |
| 1.4 Brief Scope of Work and Compliance statement | 30 |
| 1.5 Brief Methodology & Approach | 32 |
| 1.5.1 Classification of Waterways | 36 |
| 1.5.2 Measures to Improve the Depth | 38 |
| 1.5.3 Identification of IWT Terminals | 41 |
| 1.5.4 Concept Design and Cost Estimates | 43 |
| 1.5.5 Financial and Economic Analysis | 43 |
| 2.0 WATERWAY / DETAILED HYDROGRAPHIC SURVEY | 45 |
| 2.1 Hydrographic Survey | 45 |
| 2.1.1 Waterway in General and Hydro-Morphological Characteristics | 45 |
| 2.1.2 Existing Hydrological / Topographical Reference levels | 46 |
| 2.1.3 Sounding Datum and Reduction details | 47 |
| 2.2 Existing Cross Structures | 47 |
| 2.2.1 Bridges | 47 |
| 2.2.2 Electric Lines / Communication Lines | 48 |
| 2.2.3 Pipe Lines / Cables | 48 |
| 2.2.4 Dams / Barrages / Locks / Weirs / Anicuts / Aqueducts | 48 |
| 2.3 Bends | 49 |
| 2.4 Velocity and Discharge Details | 49 |
| 2.5 Waterway description | 50 |
| 2.5.1 Sub Stretch 1: From Henry Island to Dakshin Chandanpiri (0km to 10km) | 51 |
| 2.5.2 Sub Stretch 2: From Dakshin Chandanpiri - Iswaripur (10km to 20km) | 53 |
| 2.5.3 Sub Stretch 3: From Iswaripur to Phatikpur (Chainage 20 Km to 30 Km) | 55 |
| 2.5.4 Sub Stretch 4: From Phatikpur to Chintamanipur (30 km to 37.163 km) | 58 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

| | | |
|------------|---|-----------|
| 2.6 | Soil and Water Samples analysis and Results | 60 |
| 3.0 | FAIRWAY DEVELOPMENT | 63 |
| 3.1 | Proposed Class / Type of Waterway | 63 |
| 3.2 | Details of Shoals | 64 |
| 3.3 | Proposed Conservancy Activities..... | 65 |
| 3.3.1 | Dredging | 65 |
| 3.3.2 | River Training | 69 |
| 3.4 | Bank Protection / Embankment Strengthening | 69 |
| 3.5 | Navigation Markings / Navigation Aids | 69 |
| 3.6 | Modification Requirement in existing Bridges / Cables / Dams / Barrages / Locks / Weirs / Anicuts / Aqueducts | 69 |
| 3.7 | Proposed Dams / Barrages / Locks / Weirs to improve depth | 70 |
| 3.8 | Land Acquisition..... | 70 |
| 3.9 | Fairway Costing..... | 70 |
| 3.9.1 | Basis of Cost | 70 |
| 3.9.2 | Capital Cost | 70 |
| 3.9.3 | O&M Cost | 70 |
| 4.0 | TRAFFIC STUDY | 71 |
| 4.1 | General | 71 |
| 4.2 | Influence area / Hinterland | 71 |
| 4.2.1 | Population of Hinterland area..... | 72 |
| 4.2.2 | Economic Profile of Hinterland | 73 |
| 4.2.3 | Existing and Proposed Industries..... | 78 |
| 4.2.4 | Hinterland Connectivity..... | 79 |
| 4.2.5 | Connectivity with Other Waterways | 79 |
| 4.3 | Commodity Composition / Categorization..... | 79 |
| 4.3.1 | Cargo Vessels and Oil Tankers | 80 |
| 4.3.2 | Agricultural Products | 80 |
| 4.3.3 | Construction Material..... | 81 |
| 4.3.4 | Passenger Traffic..... | 81 |
| 4.4 | Originating / Terminating Commodities..... | 82 |
| 4.5 | Tourism Traffic..... | 82 |
| 4.6 | IBP Route Traffic and its Potential Movement..... | 82 |
| 4.7 | Growth Trend | 90 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

| | | |
|------------|---|------------|
| 4.8 | Conclusion | 91 |
| 5.0 | TERMINALS | 93 |
| 5.1 | General Review | 93 |
| 5.2 | Identification and Site Location | 93 |
| 5.3 | Existing and proposed facilities | 94 |
| 5.3.1 | Location Map of Proposed Ferry Ghats..... | 94 |
| 5.3.2 | IWT Facilities | 95 |
| 5.4 | Land Details..... | 97 |
| 5.5 | Geotechnical Investigations | 97 |
| 5.5.1 | Regional Geology | 98 |
| 5.5.2 | Physical Condition and Drainage..... | 98 |
| 5.6 | Costing..... | 98 |
| 5.6.1 | Capital Cost | 99 |
| 5.6.2 | O&M Cost | 100 |
| 6.0 | PRELIMINARY ENGINEERING DESIGNS..... | 101 |
| 6.1 | River Training | 101 |
| 6.2 | Bank Protection..... | 101 |
| 6.3 | Navigation Aids | 101 |
| 6.4 | Ferry Terminal and Jetties | 102 |
| 6.4.1 | Ferry Terminal..... | 103 |
| 7.0 | VESSEL DESIGN | 105 |
| 7.1 | General Review | 105 |
| 7.2 | Current Scenario | 105 |
| 7.3 | Passenger Traffic at Proposed Locations | 106 |
| 7.4 | Design Basis | 107 |
| 7.4.1 | Cargo Characteristics | 107 |
| 7.4.2 | Waterway and Other Features..... | 107 |
| 7.4.3 | Operational Factors | 108 |
| 7.5 | Proposed Vessel Size and Specifications..... | 108 |
| 7.6 | Turnaround Time | 110 |
| 7.7 | Number of Vessel Required..... | 111 |
| 7.8 | Vessel Costing..... | 113 |
| 7.8.1 | Capital Cost | 113 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

| | | |
|------------|---|------------|
| 7.8.2 | O&M Cost..... | 114 |
| 8.0 | NAVIGATION AND COMMUNICATION SYSTEM | 117 |
| 8.1 | General Requirements | 117 |
| 8.1.1 | VHF / HF..... | 118 |
| 8.1.2 | DGPS..... | 119 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

EXECUTIVE SUMMARY

1.0 INTRODUCTION

Inland Waterways Authority of India appointed M/s Egis India for providing Consultancy Services for preparation of Two Stage Detailed Project Report (DPR) of Cluster 3 National Waterways. Saptamukhi River is one of the 13 rivers clubbed in Cluster 3.

This detailed project report of 37.163 km stretch of Saptamukhi River waterway is prepared on the basis of recommendations from feasibility report, detailed survey & investigations, preliminary engineering and design and suggestions from IWAI.

2.0 WATERWAY/DETAILED HYDROGRAPHIC SURVEY

The 37.163 km stretch of Saptamukhi National waterway proposed for DPR study lies from Henry Island at Lat 21°34'57.21"N, Long 088°19'08.41"E to Chintamanipur at Lat 21°51'14.20"N, Long 88°18'40.57"E. Whole stretch of Saptamukhi waterway is having tidal influence with a maximum tidal variation of 3.05 m to a minimum tidal variation of 1.89 m.

River width in the waterway stretch varies from 0.05 km to 2.84 km. Average flow velocity in the waterway varies from 0.1433 m/sec to 0.85 m/sec.

3.0 FAIRWAY DEVELOPMENT

As obtained from the results of hydrographic survey, by taking into advantage of tidal window, sufficient LAD is available in the complete 37.163 km stretch of waterway, which suggests that waterway, is viable for throughout the year navigation. The waterway is proposed to be developed as Class VII, and for this classification 57,444 cum of dredging is required to be done. The total capital and O&M cost of fairway development works out to INR 114.89 Lakh and INR 11.49 Lakh respectively.

4.0 TRAFFIC STUDY

On the basis of detailed traffic survey and study done during DPR stage, following conclusions are made:

- a) Large cargo vessels and Oil tankers navigating along Indo Bangladesh Protocol Route uses Saptamukhi river from Dwarik Nagar to Uttar Chandanpiri.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- b) There are no big industries near the survey area, however a few brick kilns are found along the river banks.
- c) Saptamukhi river has very low passenger traffic.
- d) Passenger ferry services are operated privately all along the waterway, however, the services lack basic inland water transport infrastructure facilities for safe navigation, embarking and disembarking.

In view of existing passenger traffic per day and connectivity of Saptamukhi river with Indo Bangladesh Protocol route, Dwariknagar, Hajra and Haripur ferry ghats are recommended to be developed with required facilities for passenger ferry services.

Facilities at Haripur and Hajira ferry ghats are proposed for crossing the river only and as such is recommended that all basic amenities of terminal structure like parking, ticketing etc. shall be locally handled. Further, the facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route.

5.0 TERMINALS

Number of existing ferry ghats is located along Saptamukhi river. The existing ferry ghats lack facilities like embarking/disembarking of vessels, basic amenities for passengers etc. In this DPR, following ferry ghats are proposed to be developed with floating pontoons and gangway facilities:

- a) Hajra,
- b) Haripur and
- c) Dwariknagar

The total cost of works out on the basis of preliminary engineering design is provided as below:

| Sl. No. | Item | Amount in Lakh (INR) |
|---------|---|----------------------|
| 1.0 | Capital cost for Pontoon and Gangway at 3 locations | 221.09 |
| 2.0 | O&M cost | 6.63 |

6.0 PRELIMINARY ENGINEERING DESIGNS

Preliminary engineering design is done for proposed infrastructure required for waterway development. Following basic facilities are provided for the passenger ferry structures:

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Floating Pontoon
- Gangway

Relevant Indian and International codes are used for preliminary design of all structures.

7.0 VESSEL DESIGN

Ferry vessels developed by West Bengal Transport Infrastructure Development Corporation (WBTIDC) or other local manufacturers, with carrying capacity of 25 passengers are proposed to be operated on Saptamukhi waterway for passenger ferry services. On the basis of traffic studies done in DPR, it is recommended that 1 ferry vessel shall be purchased for proposed ferry services. The procurement and O&M cost of one ferry vessel works out to INR 35.00 lakh and INR 9.51 lakh respectively.

8.0 NAVIGATION & COMMUNICATION SYSTEM

Aids to Navigation like RIS system and marking buoys are proposed along the channel alignment. Capital and maintenance cost for the same works out to INR 279.25 Lakh and INR 167.02 Lakh respectively.

9.0 ENVIRONMENTAL & SOCIAL ASPECTS

The major objective of this study is to establish present environmental condition along the Saptamukhi River through available data /information supported by field studies to evaluate the impacts on relevant environmental attributes due to the construction & operation of the proposed project; to recommend adequate mitigation measures to minimize / reduce adverse impacts and to prepare an Environmental Management Plan (EMP) for timely implementation of the mitigation measures to make the project environmentally sound and sustainable. The study basically includes:

- Establishment of the present environmental scenario
- Study of the specific activities related to the project
- Evaluation of the probable environmental impacts
- Recommendations of necessary environmental control measures.
- Preparation of Environmental Management Plan

The entire study stretch is in South 24-Parganas district. South 24 Parganas district lies between 22°12'13"N and 22°46'55"N latitude and its longitudes are 87°58'45"E and 88°22'10"E covering an area of 9,960 sq. km. Alipore is the district headquarters of South 24 Parganas. It is the largest

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

district of West Bengal in terms of area with a very small proportion of urban settlements. A large portion of the district is included in the Forests of Sunderbans

The project falls under the lies in Earthquake high damage risk zone-IV as defined by the Indian Standard (IS) 2002 seismic zoning classification system, i.e. a zone of relative stability. The maximum temperature as recorded is 37°C and the minimum is 9°C.

Assessments of impact on environment including social considerations are done in the DPR. The total environmental estimated cost for the project is Rs. 124.945 lakh.

10.0 INSTITUTIONAL REQUIREMENTS

In view of collective development of NW-97 (Sunderbans waterways), and the proposed infrastructure development along Saptamukhi waterway, it is recommended that the development of Saptamukhi waterway shall be handled by Project Management Unit (PMU) proposed for development of Thakurran waterway, under the jurisdiction of Director, Inland Waterways Authority of India, Kolkata. Accordingly, the cost of development of Institutional requirement is considered in Thakurran waterway DPR.

11.0 PROJECT COSTING

The basis of cost estimates worked out as per following:

- a) Standard Schedule of Rates of PWD, Govt. of West Bengal.
- b) "Unified Schedule of Rates" prepared by Irrigation and Waterways department, Government of West Bengal.
- c) The consultants experience on various projects sites proximity to the project area.
- d) Local enquiries at the time of conducting surveys.
- e) Market surveys and enquires

Saptamukhi waterway is proposed to be developed as Class VII waterway. The development cost for waterway comprises of:

- a) Cost for fairway development comprising dredging and navigation & communication system
- b) Cost of pontoon and gangway
- c) Vessel Cost
- d) EMP cost

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The waterway is proposed to be developed for Class VII, with pontoon and gangway facilities at 3 locations i.e. Haripur, Hajra and Dwariknagar ferry ghats. Facilities at Haripur and Hajira ferry ghats are proposed for crossing the river only and as such is recommended that all basic amenities of ferry services like parking, ticketing etc. shall be locally handled. Further, the facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route. One ferry vessel is proposed for Saptamukhi waterway. The capital cost for development of the system components of the project viz., development of the designed waterway, construction of facilities for passenger ferry services and purchasing of vessels has been worked out as INR 749.30 Lakh with 1 vessel. Correspondingly O&M cost for Saptamukhi waterway works out to INR 220.53 Lakh.

12.0 IMPLEMENTATION SCHEDULE

The project is scheduled to be completed in 12 months from the start date of construction.

13.0 ECONOMIC & FINANCIAL ANALYSIS

An attempt has been made to estimate the possible revenue available from this service. Although this has been calculated in a thorough and logical manner the study is based on many assumptions and it should therefore be taken as a guide to the magnitude of possible revenue.

On the basis of detailed economic and financial analysis done in this DPR studies, the cost benefit analysis, calculations done for financial internal rate of return (FIRR) and Economic internal rate of return (EIRR) concludes that the project is not financially and economically viable.

However, as part of community development to provide safe and reliable water transport facilities for locals, the proposed project may be recommended for development by higher authorities. The Capital and O&M expenses estimated to be incurred for development of Saptamukhi waterway shall be considered as part of collective development of NW-97, Sunderbans waterways.

14.0 CONCLUSION

On the basis of studies done in this DPR following conclusions are made:

- a) 4.0 Km stretch of Saptamukhi river from Dwarik Nagar (Chainage 15.0 Km) to Uttar Chandanpiri (Chainage 19.0 Km) lies in the Indo Bangladesh Waterway Protocol Route.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- b) By taking into advantage of tidal window, sufficient LAD is available in the complete 37.163 km stretch of waterway, which suggests that waterway, is viable for throughout the year navigation.
- c) Large cargo vessels and Oil tankers navigating along Indo Bangladesh Protocol Route uses Saptamukhi river from Dwarik Nagar to Uttar Chandanpiri.
- d) There are no big industries near the survey area, however a few brick kilns are found along the river banks.
- e) Saptamukhi river hinterland has no major cargo and passenger traffic of its own.
- f) Passenger ferry services are operated privately along the waterway, however, the services lack basic inland water transport infrastructure facilities for safe navigation, embarking and disembarking

The cost benefit analysis, calculations done for financial internal rate of return (FIRR) and Economic internal rate of return (EIRR) concludes that the project is not financially and economically viable.

However, as part of community development to provide safe and reliable water transport facilities for locals, the proposed project may be recommended for development by higher authorities The Capital and O&M expenses estimated to be incurred for development of Saptamukhi waterway shall be considered as part of collective development of NW-97, Sunderbans waterways.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

1.0 INTRODUCTION

Inland Waterways Authority of India (IWAI), an undertaking of Ministry of Shipping, Government of India intends to develop 106 new National Waterways in addition to the existing 5 National waterways. The National waterways are proposed to be developed as a composite and integrated water transport system with the existing rail and road infrastructure across the country.

In view of this, IWAI invited online bids for "Consultancy Services for preparation of Two Stage Detailed Project Report of the 106 National Waterways in a set of eight clusters. Each waterway is to be explored for the potential of year round commercial navigation during Stage-1 (Feasibility Studies) of the project. The second stage comprises of preparation of techno-commercial detailed project report of the river/stretch approved by IWAI for stage -2 studies. Egis India Consulting Engineers Pvt. Ltd (EICEPL) was awarded the work for two stage DPR studies of two out of eight clusters respectively. Saptamukhi River was clubbed under Cluster -3 for the two stage DPR studies.

This detailed project report of 37.163 km stretch of Saptamukhi waterway is prepared on the basis of recommendations from feasibility report, detailed survey & investigations, preliminary engineering and design and suggestions from IWAI. The report is prepared in accordance with detailed ToR as per the agreement (**Refer Annexure 1**).

1.1 PROJECT BACKGROUND AND SUMMARY OF PREVIOUS STUDY

Saptamukhi River (under Sunderbans Waterways) is declared as National Waterway-97 as per "The National Waterway Act, 2016", No. 17 of 2016, published in the Gazette of India, Part – II-Section 1 no. 18, New Delhi, Saturday, March 26/2016/Chaitra 6, 1938 (Saka), by Ministry of Law and Justice (Legislative Department).

As per the Gazette notification, total 13 rivers (including Saptamukhi River) was covered in the Sunderbans waterways (NW-97). Following section of the Saptamukhi River is declared as National Waterway and recommended for feasibility studies by IWAI:

| Length | Co-ordinate at Start | Start Location | Co-ordinate at End | End Location |
|-----------|----------------------|----------------|--------------------|---------------|
| 37.163 Km | 21°34'57.21" N | Henry Island | 21°51'14.20" N | Chintamanipur |
| | 88°19'08.41" E | | 88°18'40.57" E | |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

A single feasibility report was prepared for all the 13 rivers covered under Sunderbans Waterways. Following conclusions were made for Saptamukhi River in the feasibility report.

- The waterway is a tidal river having year round navigational possibility.
- The river can be recommended for DPR studies.

The above conclusions were made on the basis of findings during the feasibility study stage. Detailed survey and investigations are done including preliminary engineering studies as per the scope of work defined in the ToR to validate above conclusions and to identify the development works required for making a techno-economically viable IWT in Saptamukhi WW.

Based on the above conclusions/observations done during feasibility studies i.e. first stage of the studies, IWAI recommended following stretch of Saptamukhi River for second stage of the studies i.e. for detailed project report.

| Length | Co-ordinate at Start | Start Location | Co-ordinate at End | End Location |
|-----------|----------------------|----------------|--------------------|---------------|
| 37.163 Km | 21°34'57.21" N | Henry Island | 21°51'14.20" N | Chintamanipur |
| | 88°19'08.41" E | | 88°18'40.57" E | |

1.2 PROJECT LOCATION / DETAILS OF STUDY AREA

Complete 37.163 km stretch of Saptamukhi waterway is located in South 24 Parganas district of West Bengal. As observed during the feasibility studies, complete stretch of waterway is having tidal influence. Locally operated jetties/ferry ghats are also available at various locations all along the river stretch.

Saptamukhi waterway project location as per DPR is shown in **Figure 1**. The detailed layout plan of waterway and terminal structures are provided in Drawings PT/EIPTIWB003/2017/DPR/0001 to 0003 attached as **Volume-II**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

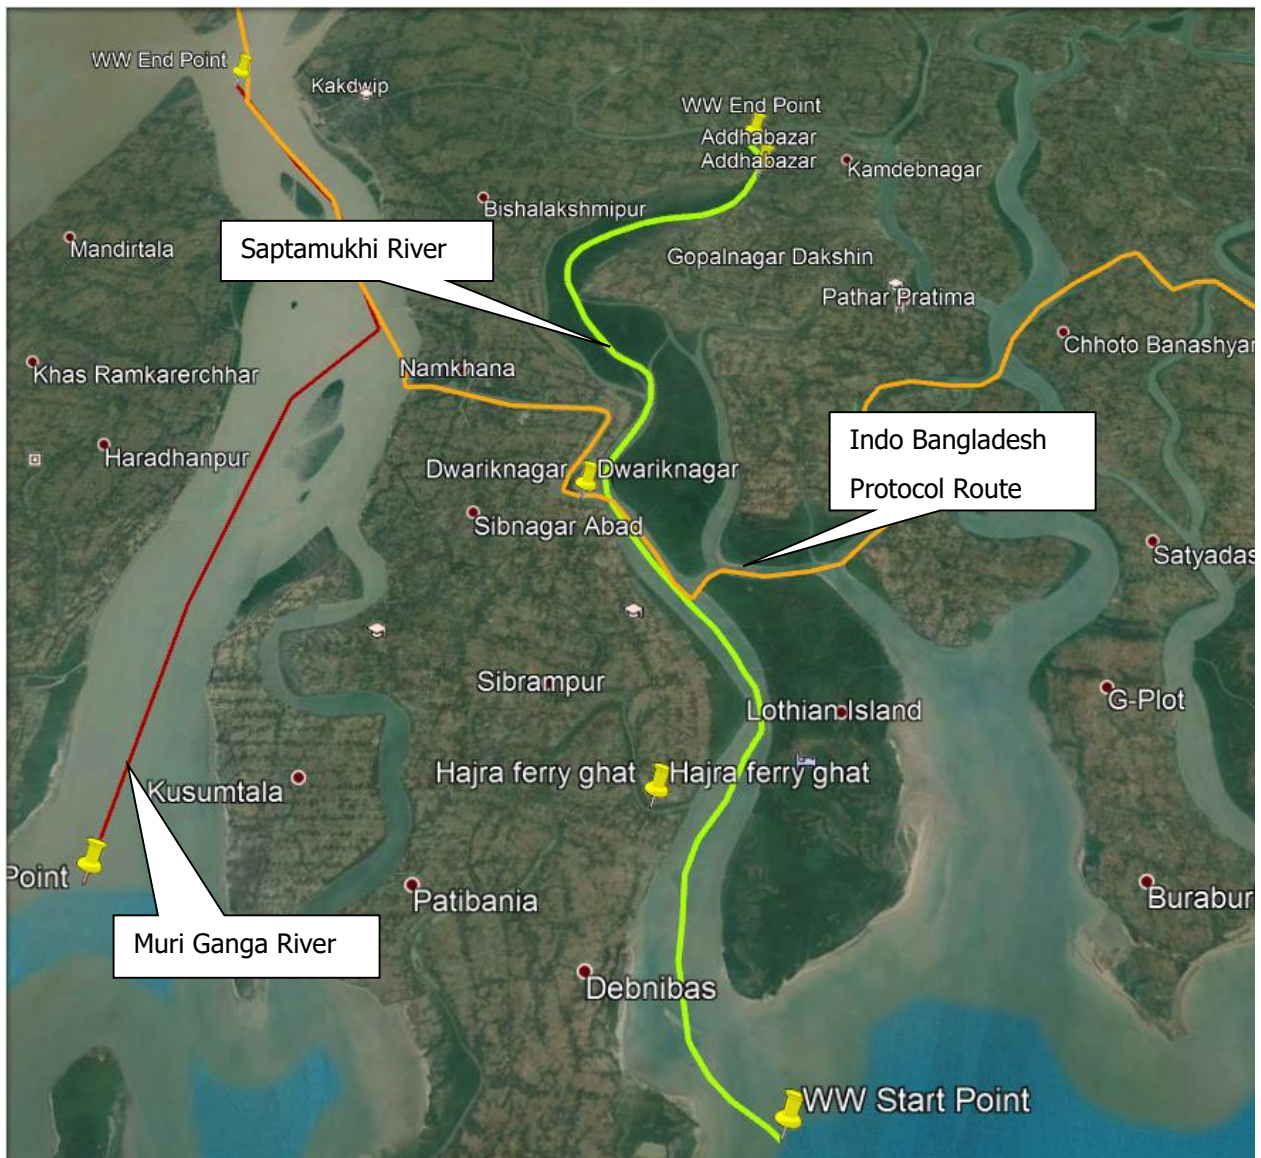

Figure 1: Saptamukhi National Waterway Project Location

1.3 INDO-BANGLADESH WATERWAY PROTOCOL ROUTE

An Inland water transit and trade protocol exists between India and Bangladesh under which inland vessels of one country can transit through the specified routes of the other country. The existing protocol routes are (i) Kolkata-Pandu-Kolkata, (ii) Kolkata-Karimganj - Kolkata, (iii) Rajshahi-Dhulian-Rajshahi and (iv) Pandu-Karimganj-Pandu. For inter-country trade, six ports of call have been declared in each country under the PIWT&T. The Ports of call in India are Haldia (West Bengal), Kolkata (West Bengal), Dhubri (Assam), Pandu (Assam), Karimganj (Assam) and Silghat (Assam). The Ports of call in

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Bangladesh are Narayanganj, Khulna, Mongla, Sirajganj, Ashuganj and Pangaon. Under the Protocol, 50:50 cargo sharing by Indian and Bangladeshi vessels is permitted both for transit and inter country trade.

IWAI is the Competent Authority on Indian side w.e.f. 8th September 2003 vide Ministry's Order No. WTC-15014/2/2001-IWT dated 29.08.03 and is responsible for maintenance of routes including conservancy and pilotage.

About 4.0 km stretch of Saptamukhi waterway, from Dwarik Nagar to Uttar Chandanpiri lies along this Indo Bangladesh Protocol Routes maintained and operated by IWAI.

1.4 BRIEF SCOPE OF WORK AND COMPLIANCE STATEMENT

The brief scope of work for the project comprises of:

- a) Hydrographic and Hydro-morphological Survey and Investigations
 - i. Installation of bench mark pillars
 - ii. Installation of water level gauges and observations as per TOR
 - iii. Bathymetric & Topographic Survey
 - iv. Current velocity and discharge measurements
 - v. Collection of water & bottom samples and analysis as per TOR
 - vi. Collection of Topographical features.
 - vii. Survey chart preparation
- b) Traffic Survey
- c) Geotechnical investigations
- d) Environmental & social impact assessment
- e) Analysis of collected data and preliminary engineering design
- f) Scheduling and costing
- g) Economic & Financial analysis for assessment of techno economic feasibility
- h) Conclusion and recommendations.

The scope of work mentioned above, under Hydrographic and hydro-morphological survey was covered in the Hydrographic Survey Charts and Report, submitted as part of first deliverable under Stage-II of the project. The compliance statement of detailed project report covering the remaining scope of work as per TOR is provided as below:

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sr. No. | Section – 6 Terms of Reference Clause No. 1.2 | Covered under Chapter No./ Title |
|----------------|---|--|
| 1.0 | Assessment of Hydrographic Survey Report | Chapter 2: Waterway/Detailed Hydrographic Survey |
| 2.0 | Traffic Survey | Chapter 4: Traffic Study |
| 3.0 | Geotechnical investigations | Chapter 5: Terminals |
| 4.0 | Environmental & Social impact assessment | Chapter 9: Environmental and Social Aspects |

| 6.0 | Scheduling and costing | Chapter 11: Project Costing Chapter 12: Implementation Schedule |
| 7.0 | Economic & Financial analysis for assessment of techno economic feasibility | Chapter 13: Economic and Financial Analysis |
| 8.0 | Conclusion and recommendations. | Chapter 14: Conclusion and Recommendations |

The above scope of works shall be executed as per the framework shown below;

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

1.5 BRIEF METHODOLOGY & APPROACH

The stretch of waterway, recommended for DPR studies is surveyed and studied in detail for techno-economic development of IWT along the proposed stretch.

Detailed hydrographic, hydro-morphological survey and investigations, traffic, environment and social survey is done out along the stretch. The data collected from survey is further analysed in detail for design of waterway, estimating of dredging quantity and finalising location and type of jetties/terminals required along the waterway. On the basis of DPR level design and drawings, cost estimate, financial and economic evaluation is done. The techno-economic viability of IWT development along the proposed stretch is assessed and concluded in the report.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

DPR studies have been construed as a means to establish the techno-commercial viability of the development of waterway, and accordingly have been taken-up in two stages:

Stage-I: Establishment of Technical Viability

Stage-II: Assessment of Financial/Economic viability, in case the technical viability is established.

A detailed DPR methodology and the expected outcome in fulfilling the assignment are presented as below:

Stage-I: Establishment of Technical Viability

Technical viability has been established on the survey & investigations, as per Volume-III of this report. Following of two major parameters have been considered to establish the technical viability:

- Availability of LAD (Least Available Depth) & dredging quantity for proposed Class of waterway
- Availability of Traffic (cargo/RO-RO/passenger)

In case, the traffic is available, all technical possibilities shall be explored to ensure the required LAD and further studies for assessment of financial viability (Stage-II) shall be performed to assess the complete techno-commercial viability.

However, in case, no traffic is available, the development of waterway in the specific reach of the river shall be considered as "Technically Not-Viable" and stage –II studies are not warranted.

Stage-II: Assessment of Financial/Economic Viability

Stage-II studies shall comprise of the following:

a) Design, Analysis and Costing

- Fairway Development
- Terminal
- Vessel
- Environmental and Social Studies

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Navigation and Communication Facilities
- Institutional Requirement
- Project Costing
- Implementation Schedule

b) Commercial Viability

- Estimation of economic and financial Returns

For Commercially viable project, the DPR will be concluded with providing recommendations for development.

For Commercially non-viable project, the DPR will be concluded declaring the project as commercially non-viable.

Above methodology is also presented as a flow chart in **Figure 2** as below:

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

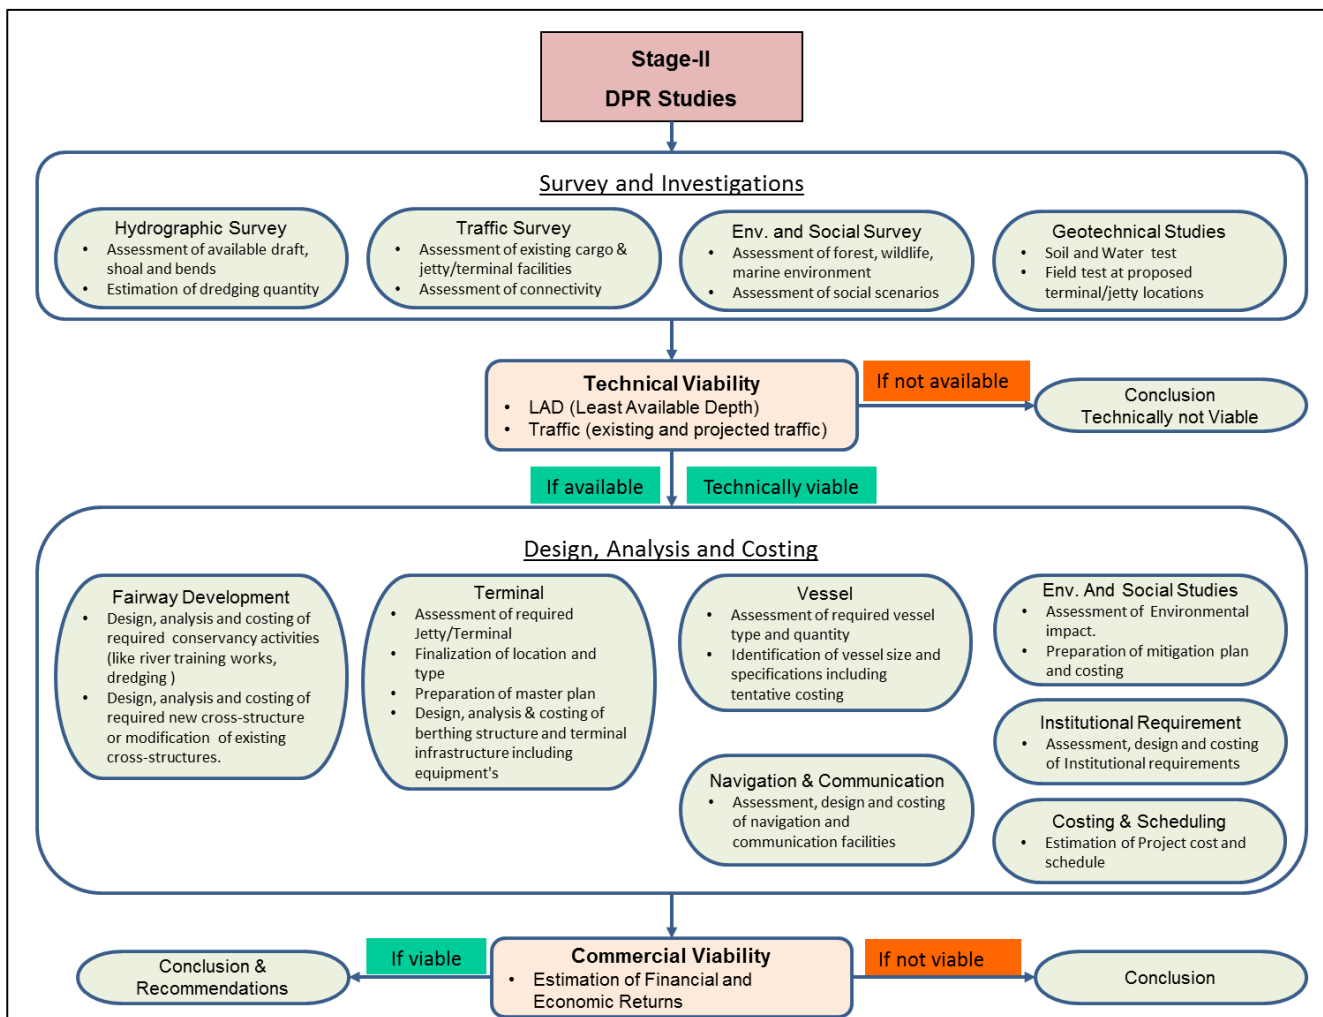

Figure 2: DPR Approach and Methodology Flow Chart

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

1.5.1 Classification of Waterways

For safe plying of self- propelled vessels up to 2000 tonne Dead Weight Tonnage (DWT) and tug-barge formation in push tow units of carrying capacity up to 8000 tonne, National waterways can be classified in the following categories as suggested by IWAI:

Table 1: Classification of National Waterway -Rivers

| Class of Waterway | Depth (m) | Bottom Width (m) | Bend Radius (m) | Vertical Clearance (m) | Horizontal Clearance Between Piers (m) | Self propelled vessel Carrying Capacity |
|-------------------|-----------|------------------|-----------------|------------------------|--|--|
| CLASS-I | 1.2 | 30 | 300 | 4 | 30 | 100 tonne Dead Weight Tonnage (approx. size 32m overall length, 5m moulded breadth and 1.0m loaded draft or one tug and two barges combination of 200 tonne Dead Weight Tonnage (approx. size 80m overall length, 5m moulded breadth and 1.0m loaded draft). |
| CLASS-II | 1.4 | 40 | 500 | 5 | 40 | 300 tonne Dead Weight Tonnage (approx. size 45m overall length, 8m moulded breadth and 1.2m loaded draft or one tug and two barges combination of 600 tonne Dead Weight Tonnage (approx. size 110m overall length, 8m moulded breadth and 1.2m loaded draft). |
| CLASS-III | 1.7 | 50 | 700 | 6 | 50 | 500 tonne Dead Weight Tonnage (approx. size 58m overall length, 9m moulded breadth and 1.5m loaded draft or one tug and two barges combination of 1000 tonne Dead Weight Tonnage (approx. size 141m overall length, 9m moulded breadth and 1.5m loaded draft). |
| CLASS-IV | 2.0 | 50 | 800 | 8 | 50 | 1000 tonne Dead Weight Tonnage (approx. size 70m overall length, 12m moulded |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

In addition to the above, IWAI also given guidelines regarding vertical clearances with respect to transmission lines for National waterways as below:

| Type of Transmission Lines | Vertical Clearance |
|--|---|
| Low voltage transmission lines including telephone lines | 16.5 |
| High voltage transmission lines, not exceeding 110 kilo volt | 19.0 |
| High voltage transmission lines, exceeding 110 kilo volt | 19.0 |
| | +1 centimetres extra for each additional 1 kilovolt |

Also:

- Waterway side slopes should be kept as 1(V): 5(H);
- Minimum depth of channel should normally be available for about 330 days of the year;
- Vertical clearance at cross structure over the waterway should be available at least in central 75% portion of each of the spans in entire width of the waterway;
- For rivers, vertical clearance should be kept over Navigational High Flood Level (NHFL), which is the highest flood level at a frequency of 5% in any year over a period of last twenty years.

1.5.2 Measures to Improve the Depth

The basic parameters considered for the fairway design are:

- Depth
- Width
- Side slopes
- Bends

As explained above, as the classification of waterways in India is based on the experience gained in various waterways, the characteristic features of the design waterways based on studies carried out by IWAI are furnished below and the same shall be followed.

Fairway Design

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The fairway depth should be good enough to ensure steerability of the vessel and to prevent bottom feel. To meet this requirement, the minimum depth that is needed in a channel would commonly be the sum of the draught (draft) of the vessel and other tolerance factors. The tolerance factors to be considered are listed as:

- Factor of keel clearance to avoid touching of the vessel to the ground and minimum free water below the keel for maintaining control on manoeuvring,
- Wave tolerance for the heaving and pitching of the vessel due to wave motion,
- Squat, increase of draft due to ship motion,
- Tolerance for siltation and dredging,
- Increase of draught due to trim and heaving due to unequal loading and steering manoeuvre respectively, and
- Tolerance for the change of draught during the transition from salt water to fresh water.

The keel clearance factor is the prime concern of the all tolerance factors considered. As per the standards laid down by German Code of practice (EAU 80), a 0.3 m layer of water column below the keel of the loaded ship is sufficient for free manoeuvrability of the vessel.

IWAI's experience in inland waterways in India and sub-continent (Bangladesh and Myanmar) shows that the under keel clearance for free manoeuvrability of the vessel varies between 0.2 and 0.5 m depending upon the soil characteristics of the channel bed and other parameters.

Width of a Channel

The total width of a navigation waterway (W) in general is expressed in terms of a beam of a vessel (B). The design width for the proposed two-way navigation can be obtained as:

$$W = BM + BM1 + C + 2C1$$

Where: W = Navigation channel width for two-way navigation.

BM = Maneuvering zone for the design vessel which takes into account the directional stability of vessel.

BM1 = Maneuvering zone for the upcoming vessel which takes into account the directional stability of vessel.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

C = Width of separating zone.

C1 = Width of the security area, between the maneuvering zone and the channel side which is accounted for environmental and human factors including bank suction.

Values recommended by various authorities for the above equation vary within wide limits. Some of the recommended values are presented here:

BM = 1.3 B to 3.0 B

BM = BM1

C = 0.5 B to 1.0 B

C1 = 0.3 B to 1.5 B

Where, B = Beam of a design vessel.

Based on the experience and recommendations of experts on Inland Waterways, the factors considered for the present design are:

BM = 1.8 B

BM = BM1

C = 0.5 B

C1 = 0.5 B

The designed channel width = $1.8B+1.8B+0.5B+2\times 0.5B$ for two way navigation at draft level = 5.1B. The bottom width of the channel for two-way navigation for the design vessel can generally be considered as 5 x B.

Slopes

The selection of slope is in accordance with the soil characteristics of the bed and banks, width of the waterway etc. The adopted channel slope shall be 1:5

Width Allowance at Bends

In bends, the width of the fairway should be more than the width of the canal that is designed for a straight reach to allow for a drift of the vessel in a curved portion of the waterway. It means that the vessel occupies a greater width in bends than in a straight stretch of the waterway. The drift of the vessel depends on the radius of the bend, the speed of the vessel, wind forces, the flow pattern and the loading of the vessel. The drift angle is larger for vessels traveling in the downstream than the

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

upstream direction. The drift angle is inversely proportional to the bend radius 'R', that is, the larger the radius the smaller the value of drift angle. Unloaded ships normally subjected to more drift and consequently take up a greater width in bends than loaded ships and therefore the proposed allowance at the keel level of the unloaded ships is larger than the loaded ships.

Dredging of Navigational Channel

The dredging quantities for the above design channel shall be worked out based on the bathymetric surveys carried out. The system and different type of navigation marks shall be proposed in the DPR are given as follows:

- Lateral marks, to mark the left and right sides of the navigation route to be followed by navigator;
- Bifurcation marks, to mark the middle ground between the navigation channel, bifurcated channel and isolated dangers in the middle of the navigational channel;
- Shore marks;
- Bank wise marks, to indicate the channel at point where it approaches a bank;
- Crossing marks, to indicated crossing and alignment of the channel from one bank to another;
- Marks of prohibited areas, to indicate no permission of entry;
- Sound signal marks, to indicate use of horning or other sound signals;
- Marks for traffic control, to control up bound or down bound vessel in one way or sequence passage or to prohibit navigation;
- Marks on bridges, to indicate the passage through bridges;
- Depth indicator marks, to indicate shallow areas ahead in the navigation channel;
- Width indicator marks, to indicate the narrow stretches ahead in the navigational channel;
- River training marks, to indicate the ongoing river training works in the river to the navigators.

1.5.3 Identification of IWT Terminals

Site selection is the most important as it decides the investment for establishing the terminal facilities. Hence, proper consideration has to be given to select the most optimum location which will minimise the capital investment and other recurring cost during operation. The selection of suitable site shall be carried out with the view of following considerations:

- Water availability near the terminal land throughout the year especially during lean season;
- Stable river channel with sufficient depth;

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Favourable hydraulic conditions for berthing and cargo handling;
- Availability of terminal land for infrastructure, cargo storage and handling;
- Traffic potential and cargo characteristics; and
- Navigational safety.

The proposed IWT Terminals shall be planned with the following infrastructure facilities for operation:

- i) Steel Gangway resting on a floating pontoon. The detailed engineering & design of gangway arrangement shall be carried out during the construction stage. The preliminary layout drawing shall be proposed in the DPR;
- ii) Administration Building and Bank protection arrangement;
- iii) Covered Storage Shed/Transit Shed;
- iv) Open storage area;
- v) Security Shed;
- vi) Forklift Trucks, Pay loaders & Dumper tracks; and
- vii) Weigh Bridge, Watch and ward, Compound wall, Firefighting arrangement, Electrical & PH Facilities including DG.

The terminal shall be proposed with suitable mooring facilities, firefighting water line, water supply pipeline, power line for shore connection to barges, fenders etc. Preliminary planning and master plan shall be prepared in the DPR stage as per the relevant IS codes. It is envisaged and proposed that to the extent possible, all shore/river bank based buildings / godown are prefabricated, pre-engineered type conforming to the best standards in vogue in logistic / supply chain industry.

Other Alternatives to Improve for Navigation

Based on our earlier study for Ganga River between the reach from Allahabad to Ghazipur, there are many methods available to improve river navigation. Bandalling work – it has to follow closely falling stage of river, closing minor channels and diverting river flow in single channel to increase depth in the navigable channel in mainly due done by bandalling. In some reaches this method becomes successful but some river stretches remain shallow and need other training measures including dredging. Channelization of river and Construction of barrages at suitable locations, creating ponding conditions with required depth and navigational locks for ships and vessel movement shall be studied. The examination of various options/measures to improve the water depth shall be studied. The most suitable method for development shall be identified with consideration on the likely morphological, sediment transport, and dredging aspects of different options. This task is expected to be fed back

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

into from the financial and economic analysis providing refinement to the proposed development until a recommended solution is reached. The most appropriate type of river development including dredging option along the river shall be identified and likely impacts of these developments on river flow depths as well as sedimentation and morphology shall be investigated. This analysis will constitute an iterative process in which problems relating to LAD will be addressed to find more successful solutions where necessary. This will however, not be an open-ended process as the assessment of techno-economic feasibility updation only requires an indication of the likely costs of building and maintaining the structures which are shown to support achievement of LAD as intended.

1.5.4 Concept Design and Cost Estimates

Preliminary Design shall be performed for all the structures /developmental works proposed as per the above analysis and mathematical model studies carried out conforming to relevant IS Codes. Design drawings shall be prepared and submitted based on the preliminary design. Bill of quantities and cost estimates shall be prepared for all the proposed structures / developmental works. Based on the cargo potential and other considerations necessary for locating an IWT terminal, extent of land required for setting up of IWT terminals and other suitable locations shall be identified. Preliminary topographic survey shall be carried out and layout plan for all suggested locations shall be prepared clearly indicating all facilities e.g. jetty, approach to jetty, bank protection, covered and open storage, roads, office, sentry hut, boundary wall, bank protection, bunkering facility, water facility, turning circle for IWT vessels location of depth contours of 2m and 2.5m in the river near the terminal sites. Preliminary engineering design and drawings for setting up of terminals with related facilities including mechanical loading/ unloading at the proposed sites shall be prepared. Also inter modal cargo transfer facilities required at these terminals shall be indicated.

1.5.5 Financial and Economic Analysis

Financial and economic analysis through FIRR and EIRR of the project including SWOT analysis shall be carried out for the project. For the Financial Internal Rate of Return shall be computed as follows:

- Costs shall be calculated as total capital investment for the Project components, net rate of interest charges during construction and operations & maintenance costs for the Project;
- Income flows shall be calculated based on gross revenues of projected goods to be transported through private operators with permissible assumptions such as project life etc.;
- Economic Internal Rate of Return shall be computed taking into account the following factors;
- The assumed life of the project as per norms;

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Costs shall be calculated as Government contribution and other sources. A standard conversion factor shall be used to reduce financial costs to economic costs;
- Benefits shall be estimated as Government revenues, calculated as net profit share, royalties and tax;
- Social Benefits like fuel saving, reduction in environment pollution and carbon emission, accident reduction, decongestion of rail and roads, etc.

The financial viability and sustainability of this project depend upon the adaptation to the prevailing context in which they operate. In working out the Financial Viability and sustainability, the following factors shall be considered.

- budgeting and cost accounting systems,
- resource mobilization for capital investments,
- cost recovery and operational financing,
- cost reduction and control.

The Profitability projections and financial analysis for each of the project components shall be worked out in detail and presented in the report. The financial statements shall be prepared on the basis of the suitable assumptions. The cost benefit analysis for the proposed project shall be calculated. IRR and preliminary expenses shall be suitably considered and estimated. Break-even analysis shall be performed and presented in the report.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

2.0 WATERWAY / DETAILED HYDROGRAPHIC SURVEY

2.1 HYDROGRAPHIC SURVEY

As detailed above, the National Waterway stretch of Saptamukhi river under DPR study is from Henry Island at Lat 21°34'57.21"N, Long 88°19'08.41"E to Chintamanipur at Lat 21°51'14.20"N, Long 88°18'40.57"E. The total length of this stretch is about 37.163 km. The scope of the work to conduct hydrographic and topographic survey of this stretch of Saptamukhi waterway comprises of:

- Undertake bathymetric and topographic survey of proposed waterway
- Establishing horizontal and vertical control stations.
- Construction of benchmark pillars and establishing its reduced level w.r.to Mean Sea Level.
- Transfer of sounding Datum.
- Setting up and deployment of water level gauges.
- Current velocity and discharge measurements.
- Collection and analysis of water and bottom samples.
- Collection of topographic features including existing cross structures.
- Preparation of inventory of industries in the project influence area (PIA).
- Analysis of survey data, including assessment of water availability for navigation.
- Preparation of survey charts and report.

2.1.1 Waterway in General and Hydro-Morphological Characteristics

The Saptamukhi River is a tidal estuarine river in and around the Sundarbans in South 24 Parganas district West Bengal, India. The river flows between Kulpi and Mathurapur blocks and has a connection with the Muri Ganga River and Deogra Khal. It falls in to the Bay of Bengal with a wide mouth after traversing about 80 kilometres.

The proposed 37.163 Km stretch of waterway is located in the South 24 Parganas district of West Bengal. Whole stretch of Saptamukhi waterway is having tidal influence with a maximum tidal variation of 3.05 m to a minimum tidal variation of 1.89 m.

Average flow velocity in the waterway varies from 0.1433 m/sec to 0.85 m/sec. Reduced depth at every 1 Km intervals for full stretch of the river is provided in **Chapter 3**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

2.1.2 Existing Hydrological / Topographical Reference levels

There was no GTS Station available near the survey area. As per IWAI guidelines, a 4 hour observation was carried out at MG-01 of Muri Ganga River and newly established BM, SM-01 to transfer the MSL value from MG-01. Also 4 hour observation were carried out at SM-02, SM-03 & SM-04 BM's and data was logged in rinex format which was post processed in Auspos and Spectra software and value of BMs w.r.t. MSL were obtained.

Sounding datum was transferred from Sagar. Saptamukhi River was divided into 10 km stretches for ease of applying Tidal level corrections to the collected bathymetric data. The values of BM's SM-02 & SM-04 w.r.t sounding datum were established by using few hour observation methods in accordance with Admiralty Manual of Hydrographic Surveying Vol 2, and SD value of SM-01 & SM-03 were transferred from SM-02 by base line processing method. Total four in number BM's pillars (naming SM-01, SM-02, SM-03 & SM-04) were constructed and erected along the river from Henry Island to Addhabazar (near Chintamanipur).

The final accepted WGS 84 coordinates and details of Benchmarks established during the conduct of survey are provided in **Table 2**.

Table 2: Description of Bench Marks

| BM | Location | Chainage | Latitude (N) | Longitude (E) | Easting (m) | Northing (m) | Height above SD (m) | Height above MSL (m) |
|-------|--|----------|--------------|---------------|-------------|--------------|---------------------|----------------------|
| SM-01 | Henry Island | 0 | 21°34'28.36" | 88°17'44.38" | 634143 | 2386294 | 10.586 | 7.766 |
| SM-02 | Hajra Ferry ghat (Dakshin Chandanpiri) | 8.5 | 21°38'55.11" | 88°17'21.64" | 633420.9 | 2394491 | 6.525 | 3.705 |
| SM-03 | Dwarik nagar | 18.5 | 21°43'38.77" | 88°16'05.85" | 631170.7 | 2403196 | 7.641 | 4.821 |
| SM-04 | Addhabazar | 35.5 | 21°50'19.67" | 88°18'49.53" | 635768.7 | 2415564 | 8.647 | 5.827 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

2.1.3 Sounding Datum and Reduction details

Sounding Datum was transferred at all the newly established BM's using Sagar values. Standard method was adopted for transfer of datum for tidal reaches areas as per Admiralty Manual. Details of Sounding Datum (SD) and reduction details are provided in **Table 3** as below:

Table 3: Details of Sounding Datum

| Sl. No | Location of Bench Mark / tide gauges | Chainage (Km) | Stretch for corrected soundings and topo levels (Km) | Established Sounding Datum w.r.t. MSL (m) at col. A. | Sounding Datum of Tide Gauge w.r.t. MSL (m) | Correction in WL data for Bathymetric survey (m) | Topo level data to be converted as depth for volume calculation wrt SD (m) |
|--------|--|---------------|--|---|---|--|--|
| | A | B | C | D (+ve indicates above MSL, -ve indicates below MSL) | E | F = (E- WL data in MSL) | G = ((E- topo levels in MSL) |
| SM-01 | Henry Island | 0 | 0.0 to 10.0 | -2.82 | -2.82 | Tide Applied w.r.t. SD | 2.82 |
| SM-02 | Hajra Ferry ghat (Dakshin Chandanpiri) | 8.5 | 10.1 to 20.0 | -2.82 | -2.82 | | 2.82 |
| SM-03 | Dwarik nagar | 18.5 | 20.1 to 30.0 | -2.82 | -2.82 | | 2.82 |
| SM-04 | Addhabazar | 35.5 | 30.1 to 37.163 | -2.82 | -2.82 | | 2.82 |

2.2 EXISTING CROSS STRUCTURES

2.2.1 Bridges

The value of MHWS and Mean Sea Level was taken from KPT Tide book for the Standard Port i.e Sagar Roads and same was applied at the site. The details of MHWS values for all cross structures are provided in **Table 4** below:-

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Table 4: Details of MHWS values of Cross Structures

| Sl. No. | Location | Cross-structure Details | Chainage (km) | Established MHWS w.r.t. MSL (m) | Computed MHWS at Cross-Structures w.r.t. MSL (m) |
|---------|------------|-------------------------|---------------|---------------------------------|--|
| 1 | Addhabazar | Road Bridge | 35.7 | 5.22 | 5.22 |

2.2.2 Electric Lines / Communication Lines

One (1) no. of high tension line is located along the waterway. The detail of this high tension line is provided **Table 5** in below.

Table 5: Detail of High Tension Lines

| SI No | Type of line | Chainage(km) | Location | Position (Lat/Long) | | Position (UTM) | | No of Piers | Horizontal clearance (clear distance Between piers) (m) | Vertical clearance w.r.t. MHWS (m) | Remarks (complete/ under- construction) |
|-------|--------------------|--------------|------------|---------------------------------|---------------------------------|-------------------------------|-------------------------------|-------------|---|------------------------------------|---|
| | | | | Left Bank | Right Bank | Left Bank | Right Bank | | | | |
| 1 | High Tension Lines | 35.90 | Addhabazar | 21°50'29.4144 088°18'35.8868 | 21°50'29.6433 088°18'36.4462 | 2415859.6620N 635374.3855E | 2415866.8370N 635390.3850E | 4 | 443 | 8.103 | COMPLETE |

2.2.3 Pipe Lines / Cables

No cross-structures, pipe lines, underwater cables are located along the entire stretch of waterway.

2.2.4 Dams / Barrages / Locks / Weirs / Anicuts / Aqueducts

No dams, barrage, weir or any other cross structure are located along the entire stretch of waterway.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

2.3 BENDS

Five (5) bends are located along the entire stretch of waterway, the details are provided as below:

| Sl. No. | Start Chainage (Km) | End Chainage (Km) | Bend Radius (m) |
|---------|---------------------|-------------------|-----------------|
| 1.0 | 7.5 | 11.7 | 4186.45 |
| 2.0 | 17.1 | 20.6 | 2088.53 |
| 3.0 | 20.6 | 23.4 | 1622.67 |
| 4.0 | 23.4 | 33.6 | 3388.82 |
| 5.0 | 33.6 | 37.16 | 2313.23 |

2.4 VELOCITY AND DISCHARGE DETAILS

Current meter observation was carried out at each location at required depths using virtual ware Current meter. The observations were carried out at the deepest route of the channels. Discharge calculations are from the observed data. The current meter and discharge details are provided in **Table 6**.

Table 6: Current Meter and Discharge Details

| Stretch No. | Chainage (km) | Position | | | | Observed Depth (m) | Velocity (m/sec.) | | | Average Velocity (m/sec.) | Area(Sq m) | Discharge (Cu.m) |

2.5 WATERWAY DESCRIPTION

The total 37.163 km stretch of Saptamukhi Waterway under DPR study, can be broadly divided in to four (4) stretches. **Table 7** below provides the details of sub-stretches of Saptamukhi waterway.

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Table 7: Sub-Stretches of Saptamukhi Waterway

| Sub-Stretch No. | Location | | Chainage | |
|-----------------|---------------------|---------------------|----------|-----------|
| | From | To | From | To |
| 1 | Henry Island | Dakshin Chandanpiri | 0 Km | 10 km |
| 2 | Dakshin Chandanpiri | Iswaripur | 10 Km | 20 km |
| 3 | Iswaripur | Phatikpur | 20 Km | 30 km |
| 4 | Phatikpur | Chintamanipur | 30 km | 37.163 km |

Detail descriptions of each sub-stretch are provided in below sections.

2.5.1 Sub Stretch 1: From Henry Island to Dakshin Chandanpiri (0km to 10km)

Both Bathymetric and Topographic Survey was carried out for this stretch between 0 to 10 km chainage of the Saptamukhi river. It is the downstream portion of the Saptamukhi river where it confluence with the Bay of Bengal. The area is sparsely populated, with fishing and farming being the main occupation of the people. There are a few hotels near Henry Island and NH 117 is in the vicinity. This river stretch is considerably wide approx 2.8 Km at the point where the river joins the Bay of Bengal but it gradually narrows to a minimum of about 900 mtrs as we move upstream with some portion of the river bank protected. Fishermen extensively use the natural slope of the ground for landing the boats and there is a small jetty near Haripur from where boats ply.

Following are the observations made during survey of Sub-stretch 1: From Henry Island to Dakshin Chandanpiri (Chainage 0 Km to 10 Km)

- There are no overhead obstructions/crossovers.
- There are no prominent dams & barrage available in this stretch.
- The tidal range is 2.85 m in this Stretch.
- There is no hindrance or encroachment in this stretch.
- Since sufficient depth is available for all time navigation dredging is not required at this stretch.

The details of current and discharge at different depths is placed at **Table 6**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Figure 3 above shows the alignment of Sub-stretch 1 (Ch. 0.0 Km to 10.0 Km) of Saptamukhi Waterway. The quantity of dredging required for all classes of waterways for this stretch is provided in **Table 8**. **Figure 4** shows the observed and reduced bed profile of sub-stretch 1.

Figure 4: Bed Profile of Waterway Sub-Stretch 1 (Chainage 0Km – 10Km)

Figure 5: Photographs of Sub-Stretch 1

2.5.2 Sub Stretch 2: From Dakshin Chandanpiri - Iswaripur (10km to 20km)

Both Bathymetric and Topographic Survey was carried out for this stretch between 10 to 20 km chainage of the Saptamukhi River. There is dense mangrove forestation on both sides of the river in this stretch. The area is not densely populated, with fishing and farming being the main occupation of the people & the fields in the area are dependent on the rainfall. This stretch is not very wide and average width is about 400 mtrs with some portion of the river bank protected. The details of current and discharge at different depths is placed at **Table 6**.

Following are the observations made during survey of Sub-stretch 1: From Mritrunjaynagar to Budhakhali (Chainage 10 Km to 20 Km)

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- There are no overhead obstructions/crossovers or hindrance or encroachment in this stretch.
- There are no prominent dams & barrage available in this stretch.
- The tidal range is 2.08 m in this stretch as we move from downstream to upstream.
- Small boats ply on this stretch of Saptamukhi River to Namkhana which is a big hub. However fishermen use the natural slope of the ground for landing the boats.

Figure 6: Google Image showing Sub-Stretch -2 of Waterway

The quantity of dredging required for all classes of waterways for this stretch is provided in Table 9.

Figure 7 shows the observed and reduced bed profile of sub-stretch 2.

Figure 8: Photographs of Sub-stretch 2

2.5.3 Sub Stretch 3: From Iswaripur to Phatikpur (Chainage 20 Km to 30 Km)

Both Bathymetric and Topographic Survey was carried out for this stretch between 20 to 30 km chainage of the Saptamukhi River. The area is very sparsely populated and has dense mangroves on either side of the river. A 800 mtr long island covered with mangroves is also present in the river.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Fishing and farming are main source of livelihood & the fields in the area are dependent on the rainfall. This stretch is considerably narrow with the width reducing from about 400 mtrs near Iswaripur to about 150 mtrs as we move upstream to Phatikpur. Large portion of the river bank is unprotected. The details of current and discharge at different depths is placed at **Table 6**.

- There are no overhead obstructions/crossovers or hindrance or encroachment in this stretch. There are no prominent dams & Barrage available in this stretch.
- The tidal range is 1.8 m in this stretch.
- Since sufficient depth is available for all time navigation dredging is not considered a requirement at this stretch.

Figure 9 above shows the alignment of sub-stretch 3 (Ch. 20.0 km to 30 km) of Waterway. The quantity of dredging required for all classes of waterways for this stretch is provided in

Table 10. Figure 10 shows the observed and reduced bed profile of sub-stretch 3.

Figure 11: Photograph along Sub-Stretch 3

2.5.4 Sub Stretch 4: From Phatikpur to Chintamanipur (30 km to 37.163 km)

Both Bathymetric and Topographic Survey was carried out for this stretch between 30 to 37 km chainage of the Saptamukhi River. The area is very sparsely populated and has dense mangroves on left bank. The right bank is fairly populated as we move upstream towards Chintamanipur. Mangroves are present on both sides in the river. Fishing and farming are main source of livelihood & the fields in the area are dependent on the rainfall. This stretch is considerably narrow with the width being about 150- 200 m. Some portion of the river bank is protected. The details of current and discharge at different depths is placed at **Table 6**.

- There is one road bridge and one HT wire connectivity near Addhabazar. There are no hindrance or encroachment in this stretch.
- There are no prominent dams & Barrage available in this stretch.
- The tidal range is 3.05 m in this stretch.
- Sufficient depth is available upto Chainage 31 and thereafter dredging would be required for all time navigation at this stretch.

3.0 FAIRWAY DEVELOPMENT

In most of the countries where inland navigation is developed, such as in Europe, China, Russia etc., the waterways have been classified in different classes depending on their physical characteristics and development potential in future. Generally, with larger waterway dimensions bigger IWT vessels can operate resulting in lower shipping cost per tonne of cargo as compared to the shipping cost of smaller vessels. One of the important factors contributing to lower shipping cost by operation of bigger vessels is the improvement in power to load ratio, i.e. capacity of cargo carrying per unit of engine power. Hence, every waterway should be developed to larger dimensions (depth and width of navigation channel) subject to the physical characteristics of the waterway. However, for developing a waterway to larger dimensions (in other wards waterway of higher class) additional investment would be required. Therefore, there would be an optimum waterway class for a particular waterway whereby total cost to the system (i.e., increase in cost due to development work vis-a-vis reduction in shipping cost) is minimum. This optimum solution is required for each waterway and for this purpose classification of waterways would facilitate planning for the optimum class of the waterway and its development.

3.1 PROPOSED CLASS / TYPE OF WATERWAY

IWAI gives a classification of waterways on the basis of width and depth of rivers/canals, radius of bends, vertical clearance, horizontal clearance between bridge piers and self-propelled vessel carrying capacity of vessels. On the basis of these criteria's, classification of waterways was done by IWAI as detailed in Paragraph **1.1.1** and **Table 1**.

From the detailed hydrographic survey, following observations are made on the proposed fairway:

- a) No dams, barrage and any other cross-structure is located along the proposed fairway stretch.
- b) Reduced depth of waterway varies from -9.61 m to 26.27 m w.r.t sounding datum for Class VII waterway.
- c) Tidal variation varies from 1.89 to 3.05 m.
- d) Width of river varies from 0.05 km to 2.84 km.

Figure 16 shows the proposed alignment of Saptamukhi waterway.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

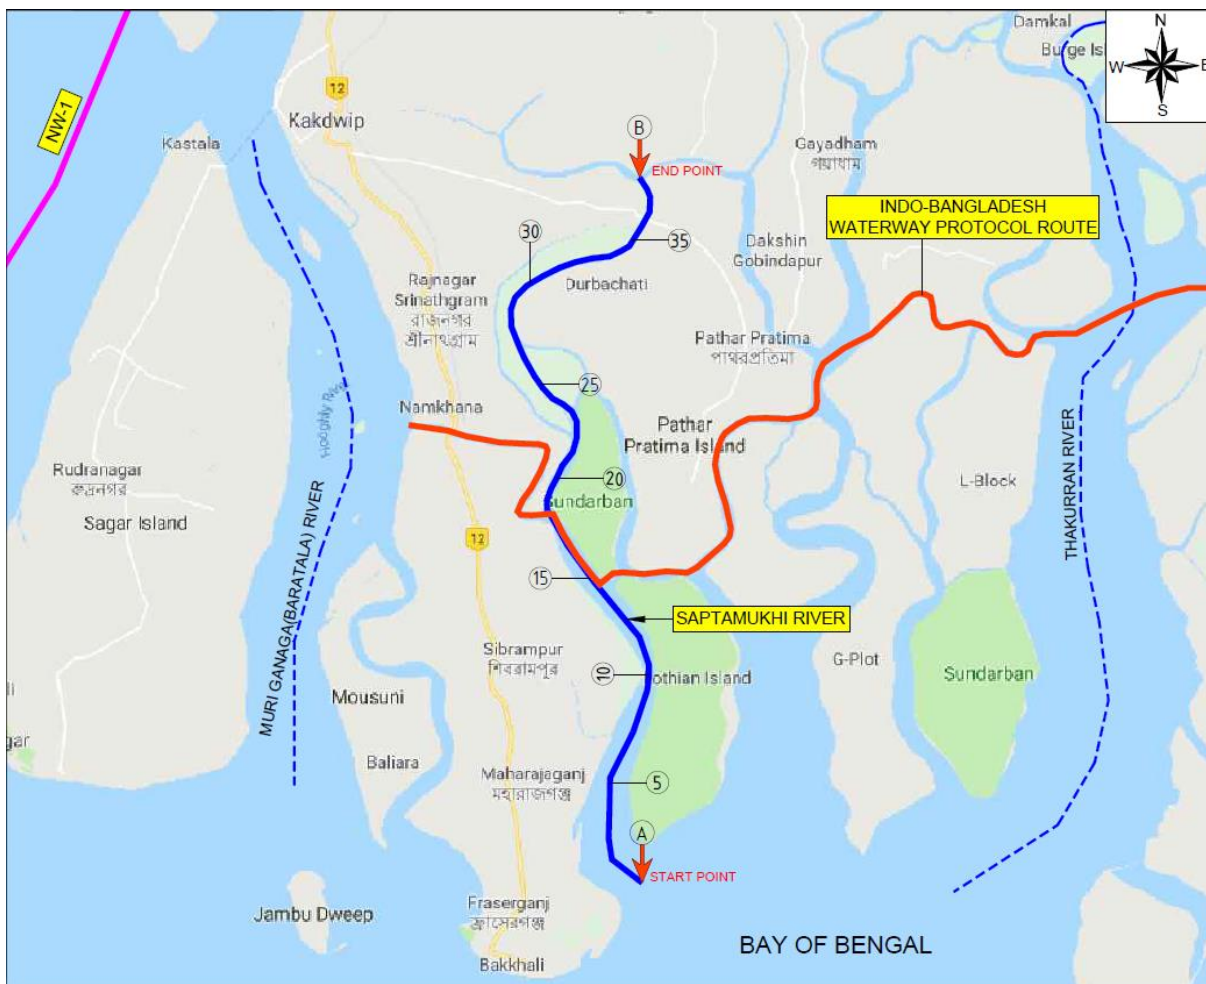

Figure 16: Proposed alignment of Saptamukhi Waterway

In addition to above features, about 4.0 Km stretch of Saptamukhi river from Dwarik Nagar (Chainage 15.0 Km) to Uttar Chandanpiri (Chainage 19.0 Km) lies in the Indo Bangladesh Waterway Protocol Route, which is already being maintained by IWAI.

The classification of waterway and its type is based on the availability of LAD and Vessel proposed to be deployed for the required traffic. As per the hydro-graphic studies, as per Volume-III of this report, by taking into advantage of tidal window, sufficient LAD is available in the complete 37.163 km stretch of waterway, which suggest that waterway is viable for throughout the year navigation. It is principally decided by IWAI to develop Sunderbans waterways as per Class VII only.

3.2 DETAILS OF SHOALS

Due consideration was given for shoals identified during the survey. As shown in

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Table 13 shoals are located along the proposed waterway, hence dredging is required as detailed below.

3.3 PROPOSED CONSERVANCY ACTIVITIES

Dredging is proposed under conservancy works for the proposed fairway stretch.

3.3.1 Dredging

A defined waterway is required to make throughout the year navigation in the IWT stretch of Saptamukhi waterway. Design improvement measures and increase of channel depth by dredging is required in the first phase of the fairway development. Thereby, regular maintenance of fairway depth by dredging is required in the navigable route.

Fairway Dimensions

As per IWAI guidelines, fairway dimensions for river classified as Class-VII waterway should have required dimensions of 100m bottom width; 2.75m depth and side slop of 5:1 as shown in **Figure 17**. The dredging quantity obtained from Hypack software for 37.163 Km stretch of waterway for Class I to VII is provided in Volume 3A – Hydrographic Survey Report and Data. For waterway Class VII, the estimated dredging quantity is provided as below:

Figure 17: Fairway Dimension Class VII

|---------------|-------|----------------|----------------|---------------------|-----------------------|-------------------------------|------------------|---------------------|-----------------------|----------------------------|--|
| From | To | Min. depth (m) | Max. depth (m) | Length of Shoal (m) | Dredging Qty. (cu.m.) | Min. Depth h (m) | Max. Depth h (m) | Length of Shoal (m) | Dredging Qty. (cu.m.) | Accumulative Dredging Qty. | |
| 31 | 32 | | | | | -1.17 | 1.74 | 1000.00 | 198153 | 678840 | |
| 32 | 33 | | | | | -1.41 | 0.74 | 1000.00 | 282453 | 961293 | |
| 33 | 34 | | | | | -3.77 | 0.74 | 1000.00 | 329846 | 1291140 | |
| 34 | 35 | | | | | -9.61 | 0.36 | 1000.00 | 591284 | 1882423 | |
| 35 | 36 | | | | | -7.52 | -0.60 | 1000.00 | 560536 | 2442960 | |
| 36 | 37 | | | | | -9.30 | -0.78 | 1000.00 | 396721 | 2839680 | |
| 37 | 37.16 | | | | | -9.30 | -0.75 | 600.00 | 312406 | 3152086 | |
| | | | | | Total | | | | Total | 3152086.38 | |

From the above table, the total dredging quantity for proposed waterway class and dimensions works out to 31,52,086.38 cum. The stretch of Saptamukhi Waterway falling in Indo Bangladesh protocol route from chainage 15.0 Km to Chainage 19.0 Km does not have any shoal and capital dredging is not required in this stretch of waterway as shown in above table.

Total stretch for dredging along the proposed waterway is recommended on the basis of following points:

- a) Indo-Bangladesh Waterway protocol route crosses Saptamukhi waterway from chainage 15.0 Km to Chainage 19.0 Km. This stretch requires no dredging.
- b) Location of proposed terminals to be developed in this DPR (as detailed in subsequent chapters 2 ferry terminals are proposed to be developed at chainage 8.0 Km and 18.7 Km respectively).

Accordingly, on the basis of above criterias, Saptamukhi waterway is proposed to be developed from Chainage 0 Km to Chainage 22.0 Km. The total dredging quantity for developing this 22.0 Km stretch of waterway in Class VII, works out to 57,444 cum

Disposal of Dredging Material

The dredged material is proposed to be dumped on low lying areas located on both sides of the river bank all along the waterway. The dredge material should be dumped providing gabion walls. The gabion walls should be adequately provided to prevent the dredged material to fall back in the waterway.

Figure 18: Photograph showing arrangement of Gabion Wall along River Bank

Selection of dredging equipment

The dredging is usually carried out with a cutter-suction dredger whereas maintenance dredging will be carried out with a trailing suction hopper dredger. There are various types of dredgers available in the market viz., suction dredger, bucket dredger, grab dredger, backhoe / dipper dredger, water injection dredger, pneumatic dredger etc. While most of these dredgers are ideally suited for sea conditions to dredge harbour and approach channels, the selection of a dredger for inland waterway is rather critical due to various mobility factors, seasonal variation of water levels (floods/dry season) and shallow depths.

The cutter suction dredgers having conventional centrifugal pumps or modern jet pumps will be more effective to dredge out the material. In a cutter-suction dredger or CSD, the suction tube has a cutter head at the suction inlet, to loosen the bed and transport it to the suction mouth. The cutter can also be used for hard consolidated type of bed. The dredged soil is usually sucked up by a wear resistant centrifugal pump and discharged through a pipe line or to barge.

Alternately the modern amphibious cutter suction dredger is also suitable for the waterway. The amphibious dredger can be road transportable, able to unload itself from the truck/lorry and can dredge rivers/canals having depths of 2.0 to 3.0 m. These dredgers can walk into the river and even in dry portions of the river during lean period. The dredgers can also be disassembled for transportation to other locations. These dredgers are indigenously available in India.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

3.3.2 River Training

No river training works is required in the proposed navigable waterway stretch.

3.4 BANK PROTECTION / EMBANKMENT STRENGTHENING

The river bank in the proposed fairway stretch is fairly stable with mild slope. No bank protection works is envisaged in the proposed fairway stretch.

3.5 NAVIGATION MARKINGS / NAVIGATION AIDS

The seasonal change in river morphology plays an important role for maintaining the navigation channel. The navigation channel generally goes on shifting due to changes in river morphology depending on seasonal rainfall and runoff. On this kind of waterway, one of main concern is safety and ease of traffic. This can be achieved by providing proper navigation aids like marker buoys, lights. The channel marking indicators is also very important for the safety and speed of navigation since the current velocity is much lower in the inner bends of a curved channel than the outer bend. If proper markings are provided, ships/vessel sailing upstream will take the inner bends with relatively less head current, thus making better speed. The ship sailing downstream in the outer bend will get the advantage of current. The main approach of the problem of making of shifting nature of navigable channel is to have the simple marks which could be shifted easily with less manpower and equipment.

As per the international convention, the aids to navigation are a device external to a craft, designed to assist in determination of position of the craft or a safe course or to warn of dangers. Whereas, navigational aids are the equipment on board a ship. Navigation markings/aids, proposed for safe navigation along the proposed fairway stretch are discussed in detail in Chapter 8.

3.6 MODIFICATION REQUIREMENT IN EXISTING BRIDGES / CABLES / DAMS / BARRAGES / LOCKS / WEIRS / ANICUTS / AQUEDUCTS

One HT line is located at Chainage 35.90 Km. Vertical and horizontal clearance available at existing HT line location w.r.t. MHS is 8.103 m and 443 m respectively. One RCC Road Bridge is also located at Chainage 35.7 Km near Addhabazar.

No modification is proposed in the existing structures.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

3.7 PROPOSED DAMS / BARRAGES / LOCKS / WEIRS TO IMPROVE DEPTH

No dam/ barrage/ locks/ weirs are proposed to improve depth.

3.8 LAND ACQUISITION

No additional land is required to be acquired for fairway development.

3.9 FAIRWAY COSTING

The cost estimate for fairway development of Saptamukhi waterway as per Class VII for IWT system including O&M of the system has been worked out. The cost estimates for development of the system are considered as Capital cost while for operation of the system is termed as maintenance or operating cost (O & M cost).

3.9.1 Basis of Cost

The basis of cost estimates worked out as per following:

- a) Standard Schedule of Rates of PWD, Govt. of West Bengal considered for various works;
- b) Market surveys and enquires
- c) Judgement based on Consultant's Experience

3.9.2 Capital Cost

The cost of initial dredging is as below:

Dredging cost @ INR 200/cum for 57,444 cum = INR 1,14,88,812/- (**INR 114.89 Lakh**).

3.9.3 O&M Cost

Operation and Maintenance of fairway comprises of dredging cost only. Actual quantity of dredging required during operation stage can be worked out from model studies only. For DPR studies, it is assumed that 10% of dredging is required annually for smooth and safe navigation. Hence O&M cost works out as:

Dredging cost @ INR 200/cum for 10% of 57,444 cum = INR 11,48,881.2/- (**INR 11.49 Lakh**).

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

4.0 TRAFFIC STUDY

4.1 GENERAL

South 24 Parganas is a district in the Indian State of West Bengal, headquartered in Alipore. It is the largest district of West Bengal state by area and second largest by population. It is the sixth most populous district in India (out of 640). On one side is the urban fringe of Kolkata and on the other, the remote riverine villages in the Sundarbans.

The district has 5 Sub-divisions namely (i) Alipore Sadar (ii) Baruipur (iii) Canning (iv) Diamond Harbour, and (v) Kakdwip. The South 24 Parganas district highlights as per 2011 census¹

- South 24 Parganas District comprises of 29 C.D. Blocks and 7 Statutory Towns.
- There are total 2,042 villages and 111 Census Towns in the District.
- South 24 Parganas District 2nd most populated district.
- The percentage of urban share of Population of South 24 Parganas District has expanded from 15.7% (2001 Census) to 25.6% (2011 Census) of total Population of respective Census.
- South 24 Parganas District ranks 4th in decadal Population growth rate among the Districts with 18.2%.
- The density of Population (Population per square km) of the district is 819 per square km which makes its rank 12th in the State.
- There are 75 (seventy five) Villages having Population 10,000 and above.
- South 24 Parganas District has the highest area (9960.00 sq km) in the State.
- A large portion in the southern part of the district is covered with thick Mangrove forests of created in the riverine delta created in the confluence of the rivers Ganga, Brahmaputra, Padma known as the Sundarban Reserve Forest which is included in the UNESCO World Heritage Site. Sundarban is a prominent National Park, Tiger Reserve and Biosphere Reserve in the country and in the world.

4.2 INFLUENCE AREA / HINTERLAND

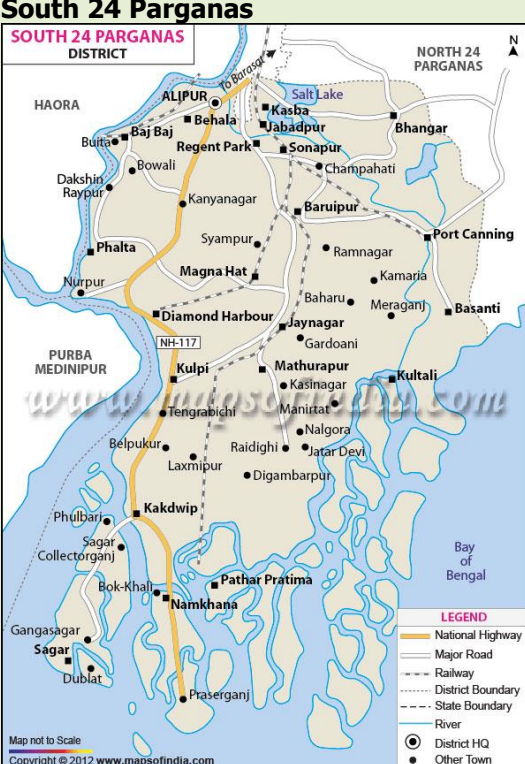

Saptamukhi is a distributary of the Hooghly in South 24 Parganas district in the Indian state of West Bengal. Saptamukhi river flows through three (3) CD blocks of South 24 Parganas district, namely, Kakdwip, Namkhana and Patharpratima. The Project Influence Area (PIA), considering existing and

¹ District Census Handbook, 2011

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

projected traffic for passenger ferry services, comprises of the following CD blocks and districts. Total influence area/hinterland extending on either side of waterway is provided in **Table 14**.

Table 14: Project Influence Area/ Hinterland

| District | Area (Km ²) | C.D. Block | Area (Km ²) | Total Hinterland area (Km ²) |
|--|-------------------------|---------------|-------------------------|--|
|  | 9,960 | Kakdwip | 252.74 | 1107.84 |
| | | Namkhana | 370.62 | |
| | | Patharpratima | 484.48 | |

4.2.1 Population of Hinterland area

Population of hinterland area for proposed IWT in Saptamukhi waterway is provided in **Table 15** below:

Table 15: Population of Hinterland²

| State | District | Population (Nos.) | C.D. Block | Population (Nos.) | Total Hinterland Population (Nos) |
|-------|----------|-------------------|------------|-------------------|-----------------------------------|
| West | South 24 | 81,61,961 | Kakdwip | 2,81,963 | 7,96,616 |

Source: Department of Statistics and Programm implementation, Government of West Bengal

The below chart show the Primary, Secondary and Teritary sectors of West Bengal state. As depicted in the chart, Primary sector consists of Agriculture, Forestry, Fishery, Mining & Quarrying. Whereas Secondary sector includes different types of manufacturing industries, Construction, Electrical, Gas & Water supply sectors. Services based industries comes under Tertiary sector.

Figure 19: Sectors of West Bengal

Figure 20 below shows the percentage share of GSDP by primary, secondary and tertiary sectors at constant price level of 2004-05. **Figure 21** below shows the sectoral composition of GSDP by broad sectors of agricultural & allied, industry and services at constant price level of 2004-05. Input data sourced from Department of Statistics and Programm implementation, Government of West Bengal.

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Figure 20: Percentage Share of GDP by different Sectors of West Bengal Economy at Constant (2004-05) Prices

Figure 21: Sectoral Composition of GDP by Broad Sectors of the Economy of West Bengal at Constant (2004-05) Prices

From the above charts, it is evaluated that the Services contributes more than 50% to GDP and is shown considerable decadal growth rate. Contrary to this, the contribution of agricultural and industrial sectors in GDP is declining throughout the decade

Economic profile of hinterland district i.e. South 24 Parganas are provided in **Table 18** and the same is presented in **Figure 22** as below:

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Table 18: Gross District Domestic Product and Annual Growth Rate of South 24 Parganas

(at 2004-05 Constant Prices,)

| Year | Gross District Domestic Product (INR Crores) | Annual Growth Rate (Percentage Change over Previous Year) |
|----------------|---|--|

Figure 22: Annual Growth Rates of Gross District Domestic Product

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Table 19: Contribution of South 24 Parganas in GSDP of Broad Sectors of Economy in West Bengal

(at 2004-05 Constant Prices, Per cent %)

| Sectors | 2004-05 | 2011-12 | 2012-13 | 2013-14 |
|----------------------|---------|---------|---------|---------|
| Agriculture & Allied | 7.86 | 8.15 | 7.9 | 7.9 |
| Industry | 9.31 | 7.97 | 7.94 | 7.94 |
| Services | 7.71 | 7.88 | 7.81 | 7.81 |
| Total GSDP | 8.09 | 7.94 | 7.85 | 7.85 |

From **Table 19**, it is concluded that, South 24 Parganas has major contribution in services sector and shows descent decadle growth. Contribution of South 24 Parganas in GSDP of Broad Sectors of Economy in West Bengal is also presented in **Figure 23** as below:

Figure 23: Contribution of South 24 Parganas in GSDP of Broad Sectors of Economy

4.2.3 Existing and Proposed Industries

Brick kilns are located all along the river stretch on both sides of banks. These brick kilns mostly uses fuel wood, saw dust, rice husks and agricultural residues along with coal for firing their kilns. All these are locally arranged and transported through roads/local boats by owners directly to their kilns.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

However, no major industry or any other commercial establishment is located and proposed in the hinterland area.

4.2.4 Hinterland Connectivity

The stretch is well connected with road and rail network. NH 117 in the vicinity. Ferry services run from Dwarikapur to Namkhana. Mobile network is intermittently available in the area. Both sides of the river are moderately connected with road transport network and private vehicles are also available in the near by area.

4.2.5 Connectivity with Other Waterways

Saptamukhi waterway is also connected with other declared waterways of Sunderbans as shown below:

Table 20: Connectivity with other Waterways

| Sl. No. | Waterway Name | Chainage at merging location (Km) |
|---------|---|-----------------------------------|
| 1.0 | Indo Bangladesh waterway protocol Route | 15.0 Km to 19.0 Km |

4.3 COMMODITY COMPOSITION / CATEGORIZATION

Detailed traffic survey was done by the consultant along the study stretch of Saptamukhi Waterway. During the survey, it was observed that, privately run passenger ferry services are operational in Saptamukhi river.

Also, the river is used for movement of cargo vessels and oil tankers to and fro Bangladesh and Kolkata.

Existing and proposed commodities planned for Saptamukhi waterway can be categorized as follows:

- a) Cargo Vessels and Oil Tankers
- b) Agricultural Products
- c) Construction Material
- d) Passengers

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

4.3.1 Cargo Vessels and Oil Tankers

As Saptamukhi river is part of the Indo Bangladesh Protocol Route, cargo vessels and Oil tankers originated/designated to/from Kolkata/Bangladesh navigates through Saptamukhi river from Dwarik Nagar to Uttar Chandanpiri. Location Map of National Waterways and Indo-Bangladesh Protocol Route are shown in **Figure 24**.

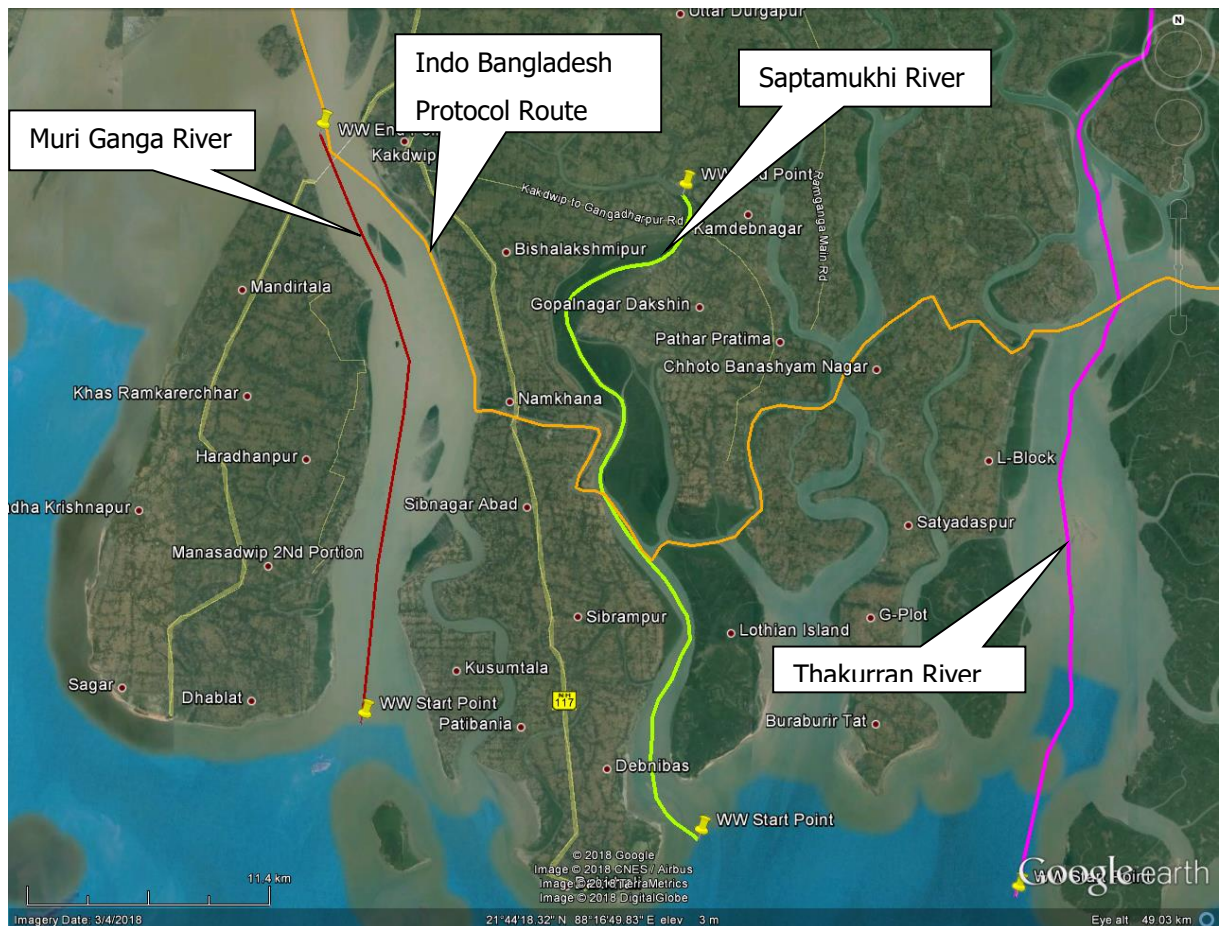

Figure 24: Location Map of National Waterways and Indo-Bangladesh Protocol Route

Though Saptamukhi river is used for navigating the large cargo vessels and oil tankers, none of the cargo is designated or originated to/from Saptamukhi hinterland.

4.3.2 Agricultural Products

Agriculture and allied sectors are the main-stay of the economy in districts comprising hinterland area. It provides both direct and indirect employment to the majority of the workforce. Agriculture is the

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

main source of livelihood of the population supplemented by livestock rearing, fishery and horticulture. The district lack mineral resources and so also major and medium industries. Hence, the rural population of the district mainly depends on agriculture, fishery and other activities allied to agriculture for their livelihood.

The major crop in this area is Paddy which is dependent on seasonal rainfall and local water supply. Fishing and boat building is the main core business of locals and they earn their lively hood from this resource.

4.3.3 Construction Material

All construction materials are available and transported along the project hinterland by roads. Smaller quantities of construction material, like sand and cement bags, to be used for local construction activities along the river for areas not approachable by road, are transported through river. However, the same is transported on need basis by locals and can not be considered as permanent traffic. As per the traffic survey done in March 2017, majority of the materials are procured from Kolkata and destined for remote areas of South and North 24 Parganas as well as to Bangladesh. As the material is neither procured nor destined for the areas along or around proposed waterway, the quantity is not ascertained. Accordingly, there is no potential for movement of construction material in the Saptamukhi waterway.

4.3.4 Passenger Traffic

Passenger ferry services are available at various locations along the 37.163 km stretch of Saptamukhi river. Traffic survey was done in March 2017. The details of passenger ferry services are provided in **Table 21**.

Table 21: Existing Passenger Ferry Services in Saptamukhi River

| Ferry Route No. | Passenger Ferry Services | | Passengers using Jetty per day |
|-----------------|--------------------------|--------------|--------------------------------|
| | From | To | |
| 1 | Hajra ferry ghat | Haripur ghat | 200 |
| | | Metri pur | |
| | | Basir ghat | |
| 2 | Dwariknagar | Namkhana | 30 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

All above ferry services are locally operated.

Figure 25: Photograph of Jetty located at Harinagar (Chainage 8.0 Km)

4.4 ORIGINATING / TERMINATING COMMODITIES

Only passenger traffic with small cargo like agricultural products, fish, bricks, construction materials and two wheelers are located along the waterway.

4.5 TOURISM TRAFFIC

No major tourist area is located along the waterway.

4.6 IBP ROUTE TRAFFIC AND ITS POTENTIAL MOVEMENT

An Inland water transit and trade protocol exists between India and Bangladesh under which inland vessels of one country can transit through the specified routes of the other country. The existing protocol routes are (i) Kolkata-Pandu-Kolkata, (ii) Kolkata-Karimganj - Kolkata, (iii) Rajshahi-Dhulian-Rajshahi and (iv) Pandu-Karimganj-Pandu. For inter-country trade, six ports of call have been declared

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

in each country under the PIWT&T³. The Ports of call in India are Haldia (West Bengal), Kolkata (West Bengal), Dhubri (Assam), Pandu (Assam), Karimganj (Assam) and Silghat (Assam). The Ports of call in Bangladesh are Narayanganj, Khulna, Mongla, Sirajganj, Ashuganj and Pangaon as shown in **Figure 26** below. Under the Protocol, 50:50 cargo sharing by Indian and Bangladeshi vessels is permitted both for transit and inter country trade.

Figure 26: The Indo Bangladesh Protocol (IBP) routes under PIWT&T

IWAI is the Competent Authority on Indian side w.e.f. 8th September 2003 vide Ministry's Order No. WTC-15014/2/2001-IWT dated 29.08.03 and is responsible for maintenance of routes including conservancy and pilotage. The stretch of IBP route along proposed 13 rivers of National waterway 97, Sunderbans waterways is shown in **Figure 27** below.

³ Annual Report on Traffic on National Waterways: FY 2019-20, by IWAI

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

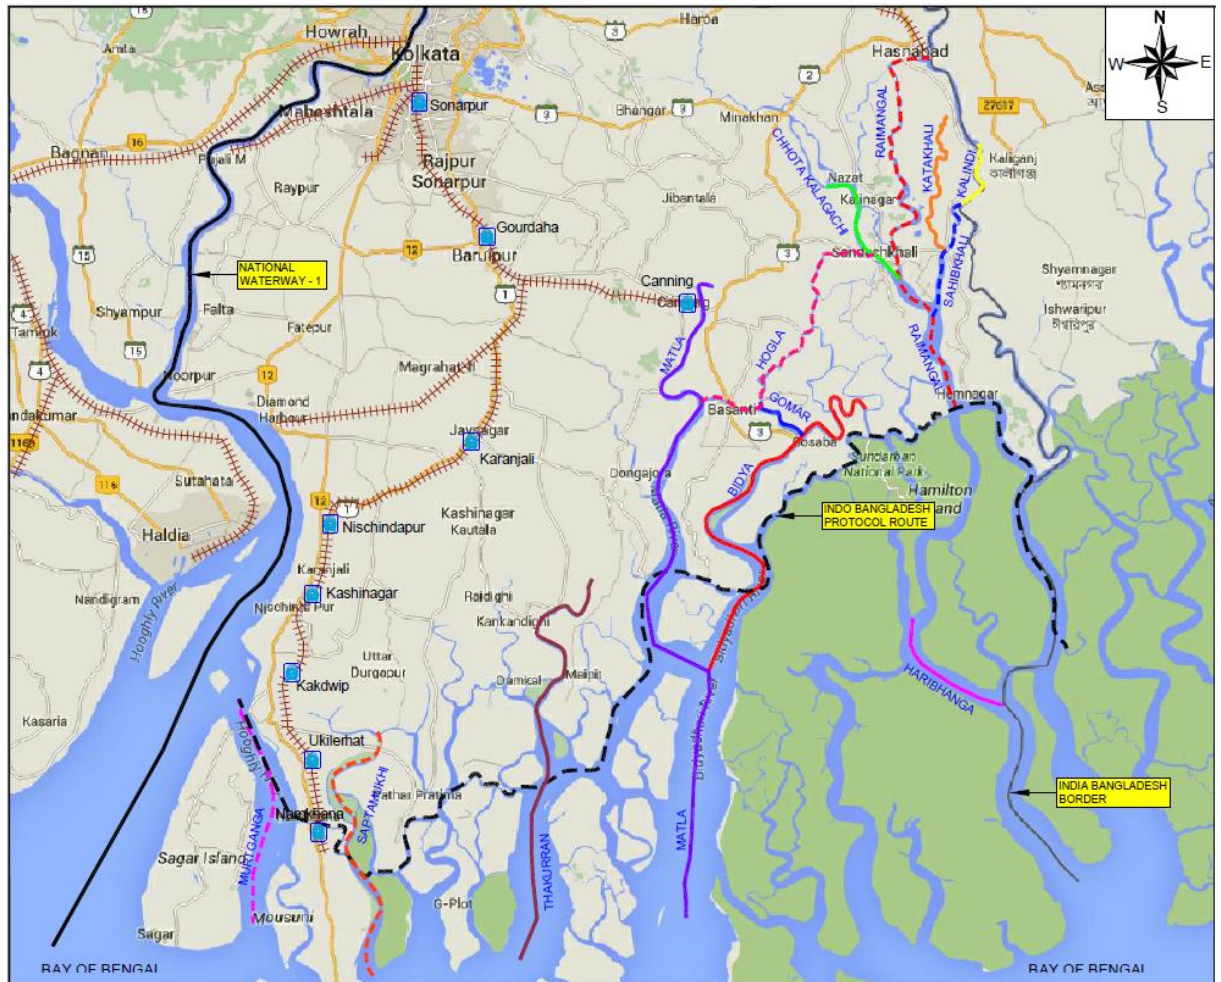

Figure 27: Location map of IBP route along NW97 (Sunderbans Waterways)

Traffic on the IBP route predominantly consists of fly ash movement from Kolkata/Haldia to destinations based in Bangladesh. Fly ash movement to Bangladesh is driven by the requirement of Cement plants. M/s Feedback Infra (P) Limited had conducted the Technical, Economic and Financial (TEF) feasibility studies for development of Sunderbans Inland Waterways in the IBP route⁴. The final report was submitted to IWAI on 30th March 2017. As per the report, the Indo-Bangladesh protocol route is the major contributor towards Indo-Bangladesh trade through waterways.

According to the TEF studies, majority of the cargo in the IBP route constitute of Fly ash, Slag, Clinkers and Gypsum. These products are raw materials to Cement industries and other manufacturing

⁴ Final Technical, Economic & Financial Feasibility Report on Development of Sunderbans Inland Waterways, 2017, by IWAI

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

industries in Bangladesh. The cargo movement in IBP route is majorly from the Kolkata cluster to various river ports in Bangladesh.

Some of indicative long-standing linkages between industries in the region are as follows.

- Fly ash – from Kolaghat and Bandal coal-fired power plants (West Bengal Power Development Corporation Limited)
- Gypsum – from chemical industries cluster in Haldia
- Clinker – from cement industries (Ambuja, ACC Cement, etc.)
- Granulated slag – from steel plants in Kolkata cluster

The protocol route was also used for transportation of commodities including fuel (diesel and petrol), food grains (rice and pulses), iron rods, etc. to Tripura and other north-eastern states. The commodities are majorly transshipped through Ashuganj port (on Kolkata-Karimganj route) and moved through road to the north-eastern states.

Based on the commodity flows and industrial assessment, the traffic along the protocol route were broadly classified into three categories in the TEF studies, as shown below:

- a) Trade traffic – includes commodity movement between Kolkata (via Petrapole Land Port, Kolkata Sea and waterways) and Bangladesh.
- b) Transit traffic – includes commodity movement between the hinterland and North-Eastern states such as Assam, Tripura, Manipur, Mizoram, Meghalaya and Arunachal Pradesh.
- c) Traffic within Sunderbans – Includes the passenger and commodity movement between major population nodes of Sunderbans.

It was concluded from the feasibility studies that, major component of traffic in sunderban waterways along IBP route comprises trade and transit traffic only. Traffic within sunderbans comprises of passenger movement only because of tourism and work. This movement is by ferry across rivers, on short stretches along rivers and tourism based passenger traffic. On the basis of estimated traffic, IBP route was proposed for development in the TEF feasibility report along with terminal infrastructure facilities at 3 locations i.e. Kolkata, Haldia and Hemnagar. The Hemnagar Terminal is proposed as a Customs check-point and no loading or unloading of material/cargo is envisaged at the terminal.

The results concluded from this TEF studies are also supported by the IBP route traffic presented in the Annual Report on Traffic on National Waterways of FY 2019-20, published by IWAI.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

As per the Annual Report on Traffic on National Waterways of FY 2019-20, published by IWAI, approx. 3.5 million tonne of traffic moved on the IBP route in FY-20 and displayed a growth of approx. 7% over FY-19 as shown in **Figure 28**. Vessels plying on IBP route for fly ash movement are shown in **Figure 29**.

Figure 28: IBP route: Month-wise traffic (FY-19 & FY-20)

Figure 29: Vessels plying on the IBP route

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Figure 30 below shows the commodity profile of the traffic handled on the IBP route in FY-20. It can be observed that almost 97% of the traffic on the IBP route is fly ash. The jetties at the origin locations handling fly ash are IWAI Haldia Jetty (30%), Budge Budge, Kolkata (24%), T.T Shed (18%) and G.R Jetty 2 (14%). Among the jetties at the destination locations, Narayanganj receives 84% of this fly ash followed by Khulna which receives the remaining 16%.

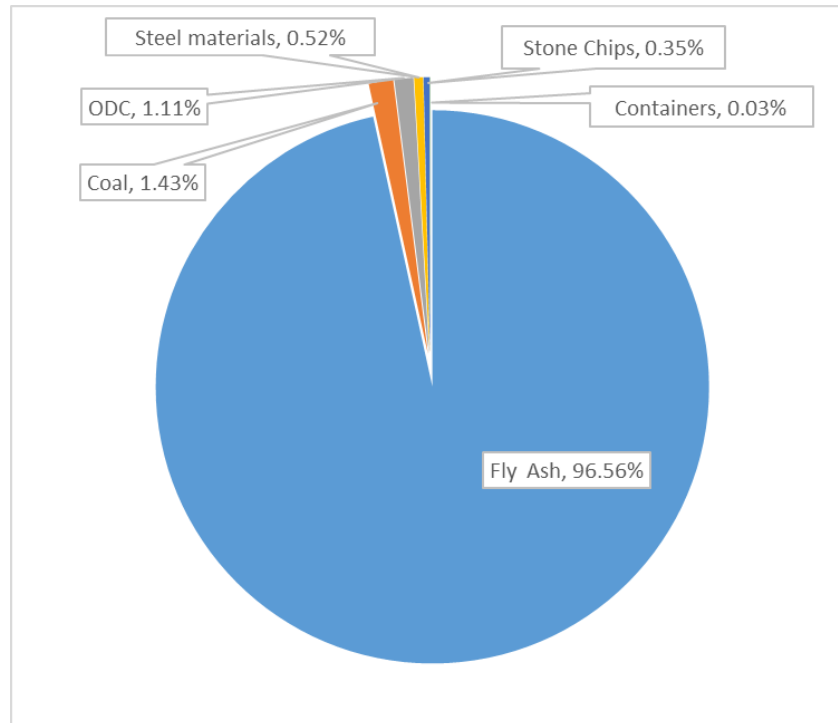

Figure 30: IBP route: Commodity profile of traffic (FY-20)

Commodities other than fly ash constitute approx. 3% of traffic on the IBP route, of which coal is the highest (1.4%) followed by Over Dimensional Cargo (ODC) (1.11%). Steel materials, Stone chips and Containers constitute less than 1% of the traffic.

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

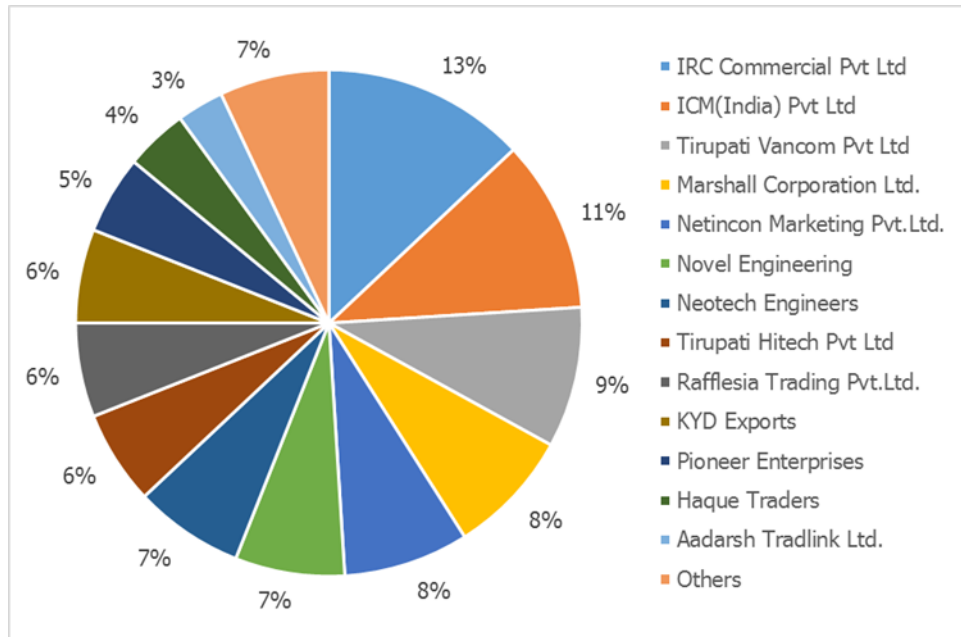

Figure 31: IBP route: Shipper-wise traffic (FY-20)

Figure 31 below shows the key shippers who used the IBP route for movement in FY-20. It can be observed that there are multiple shippers who move their cargo using the IBP route. Most of these shippers are exporters of fly ash. There are close to 39 shippers on the IBP route of which the top 13 constitute 93% of the traffic. The balance 25 shippers also include large scale companies like Bharat Heavy Electricals Limited (ODC, Steam Turbine & Steel), Jindal Steel & Power (Steel materials) and Tata Steel (Hot rolled steel coils).

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Figure 32: IBP route: Jetty-wise share of traffic at origin & destination (FY-20)

Figure 32 above shows the jetty wise share of cargo handled both at the origin and the destination on the IBP Route in FY-20.

It can be observed that among the origin jetties/ports (India Ports of call), 85% of the traffic on the IBP route is handled at 4 jetties namely IWAI Haldia Jetty, Budge Budge-Kolkata, T.T Shed-Kolkata and G.R Jetty 2-Kolkata. Of these 4, the top 2 jetties, IWAI’s Haldia Jetty and Budge Budge Jetty only handled fly ash and steam coal. T. T Shed primarily handled fly ash along with a small quantity of ODC and steam coal, whereas IWAI’s G.R. Jetty 2 handled a variety of commodities. Of the remaining jetties, HDC fly ash Jetty and IWAI’s BISN Jetty constituted 13% of the traffic. HDC fly ash jetty and IWAI BISN Jetty handled fly ash. The other jetties such as KPD, Kolkata, NS Dock, Kolkata and HDC, Kolkata jetties handled 2 % of the traffic mainly consisting of project cargo and steel materials.

In terms of the destination jetties/ports (Bangladesh Ports of call), Narayanganj and Khulna handled more than 98% of the traffic. Both these jetties predominantly unload fly ash along with small quantities of project cargo, steel material and stone chips.

A total of 12 jetties on NW-1 loaded traffic for the IBP route in FY-20, of which 6 jetties loaded 98% of the traffic.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

About 4.0 km stretch of Saptamukhi waterway, from Dwarik Nagar to Uttar Chandanpiri lies along this Indo Bangladesh Protocol Routes maintained and operated by IWAI as shown in **Figure 33**.

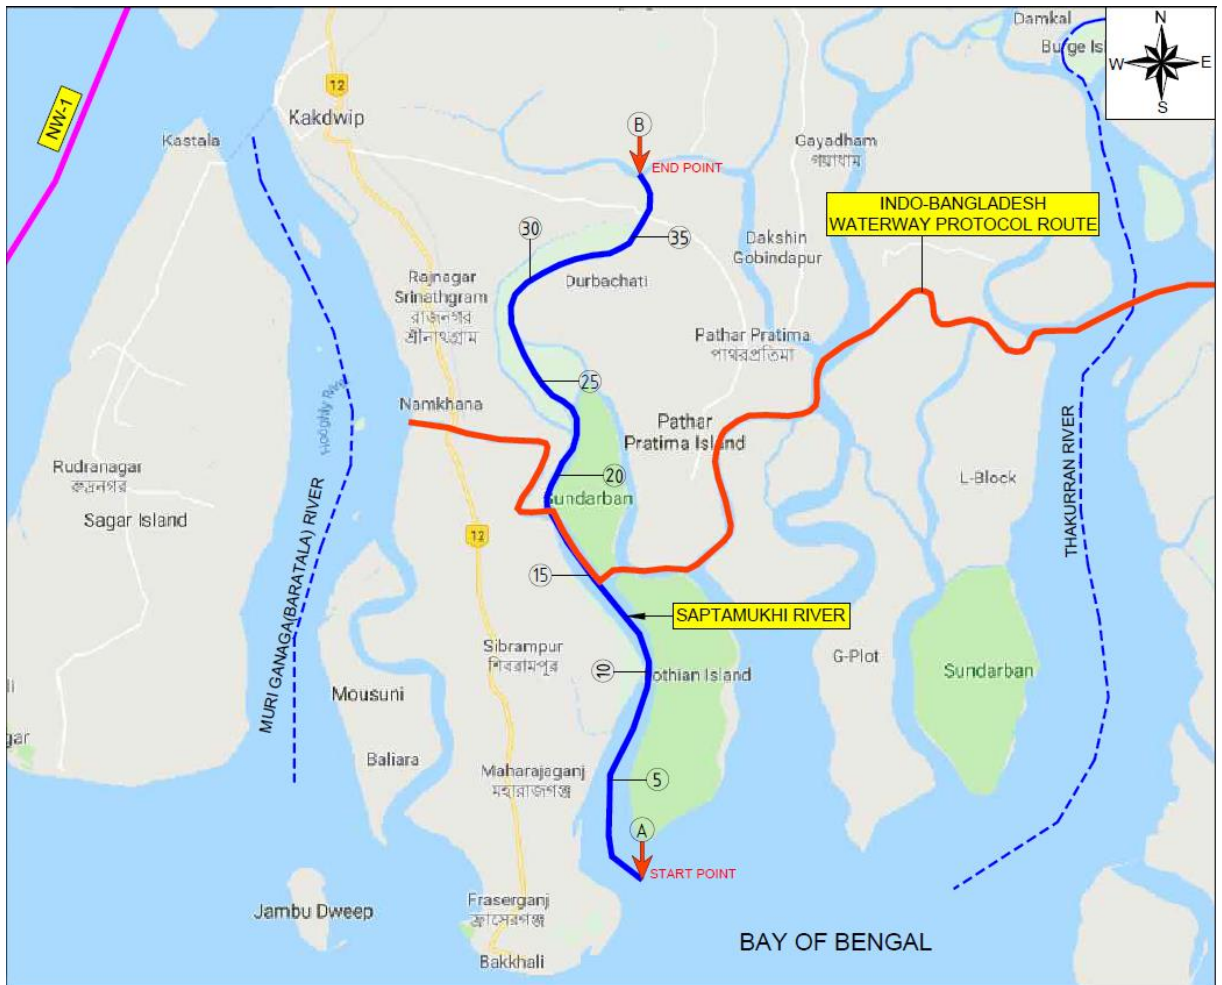

Figure 33: Saptamukhi Waterway route along IBP route

As per the traffic studies done in this DPR, TEF report for development of Sunderbans waterways in the IBP route and IBP traffic data provided in annual Report on Traffic on National Waterways (FY 2019-20) prepared by IWAI, potential of cargo movement is not envisaged from/to Saptamukhi waterway to/from IBP route.

4.7 GROWTH TREND

As per district census statistics, the decadal population growth rate of South 24 Parganas is 18.2% and average Gross District GDP growth rate is 6.33%. In the absence of any historical data, 8% of

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

growth trend for passenger traffic is considered on the basis of discussion done with local boat operators during site visit.

With the base traffic of about 200 passengers, the growth trend for passenger traffic in Saptamukhi waterway for 20 years (from 2020 to 2040) is shown in **Figure 34**.

Figure 34: Projected Passenger Traffic of Saptamukhi River

With assumed growth rate of 8%, the passenger traffic considered for design is estimated as about 504 pax per day for 10th year and 1,087 pax per day for 20th year.

4.8 CONCLUSION

Following conclusions are made from the traffic studies done above:

- Large cargo vessels and Oil tankers navigating along Indo Bangladesh Protocol Route uses Saptamukhi river from Dwarik Nagar to Uttar Chandanpiri.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- b) There are no big industries near the survey area, however a few brick kilns are found along the river banks.
- c) Saptamukhi river has very low passenger traffic.
- d) Passenger ferry services are operated privately all along the waterway, however, the services lack basic inland water transport infrastructure facilities for safe navigation, embarking and disembarking.

In view of existing passenger traffic per day and connectivity of Saptamukhi river with Indo Bangladesh Protocol route, Dwariknagar, Hajra and Haripur ferry ghats are recommended to be developed with required facilities for passenger ferry services.

Facilities at Haripur and Hajira ferry ghats are proposed for crossing the river only and as such is recommended that all basic amenities of terminal structure like parking, ticketing etc. shall be locally handled. Further, the facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route.

5.0 TERMINALS

The terminal planning and design includes selection of suitable sites in the vicinity of traffic potential considering all the relevant technical variables such as choosing the type of berthing facility and providing of waiting and parking areas and other ancillary facilities required for efficient terminal operation. Based on the projected traffic, the selection of various facilities will be planned. The cost estimate including capital and operating costs is planned for each of the proposed system considering the design. These above aspects are briefly explained in the following subsequent sections.

5.1 GENERAL REVIEW

Saptamukhi river is having potential for Inland Water Transport due to its topography, location and connectivity with Indo Bangladesh protocol (IBP) Route.

As detailed in traffic study, the project area and connecting hinterland do not have any major commercial or industrial unit. However, the waterway is used for passenger ferry services and to transport small cargo along the stretch.

In view of the above, it is recommended to develop the waterway and ferry ghats to provide required inland water transport infrastructure facilities for safe and secure commuting.

5.2 IDENTIFICATION AND SITE LOCATION

Site selection is most important as it decides the investment for establishing the terminal facilities. Hence proper consideration has been given to select the most optimum location which will minimise the capital investment and other recurring cost during operation. The selection of suitable site was carried out with the view of following considerations:

- Water availability near the terminal land throughout the year especially during lean season,
- Stable river channel with sufficient depth,
- Favourable hydraulic conditions for berthing,
- Availability of land for terminal infrastructure,
- Traffic potential, and
- Navigational safety

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

5.3 EXISTING AND PROPOSED FACILITIES

There are number of existing ferry ghats located along the Saptamukhi River. The list of existing jetties are provided in **Table 22** as below

Table 22: List of Existing Jetties

| Terminal Name | Co-ordinates | Approx. Chainage from starting point | Draft Available | Connecting Road | Connecting Village/District |
|-------------------------|--------------------------------|--------------------------------------|-----------------|---------------------------|--|
| Haripur Ferry Ghat | 21°38'51.05"N 88°17'25.96"E | 8 km | 1.0m | Village Road | Haripur |
| Hajra ferry ghat | 21°38'54.49"N 88°17'23.91"E | 8 km | 1.0m | Village Road | Chandanpiri, Dakshin Chandanpiri |
| Dwariknagar | 21°43'39.82"N 88°16'5.88"E | 18.7 km | 1.5m | Village Road | Sibnagar Abad, Dwariknagar |
| Addhabazar (Not in Use) | 21°50'25.61"N 88°18'48.90"E | 35.9 km | 1.0m | Kakdwip-Gangadharpur Road | Addhabazar, Chintamanipur, Radhakrishnanagar |

Location map of all the above ferry ghats are provided in Volume 2 of the DPR. These ferry ghats are locally maintained and operated. On the basis of fairway and traffic studies done in this DPR, it is recommended to develop Haripur, Hajra and Dwariknagar ferry ghats. Facilities at Haripur and Hajira ferry ghats are proposed for crossing the river only and as such is recommended that all basic amenities of ferry services like parking, ticketing etc. shall be locally handled. Further, the facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route.

It is proposed to inland water transport facilities like Gangway and Pontoon at the above ferry ghat locations for passenger embarking and disembarking.

5.3.1 Location Map of Proposed Ferry Ghats

Location of the above proposed two ferry ghats, is presented in the Google earth image below:

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

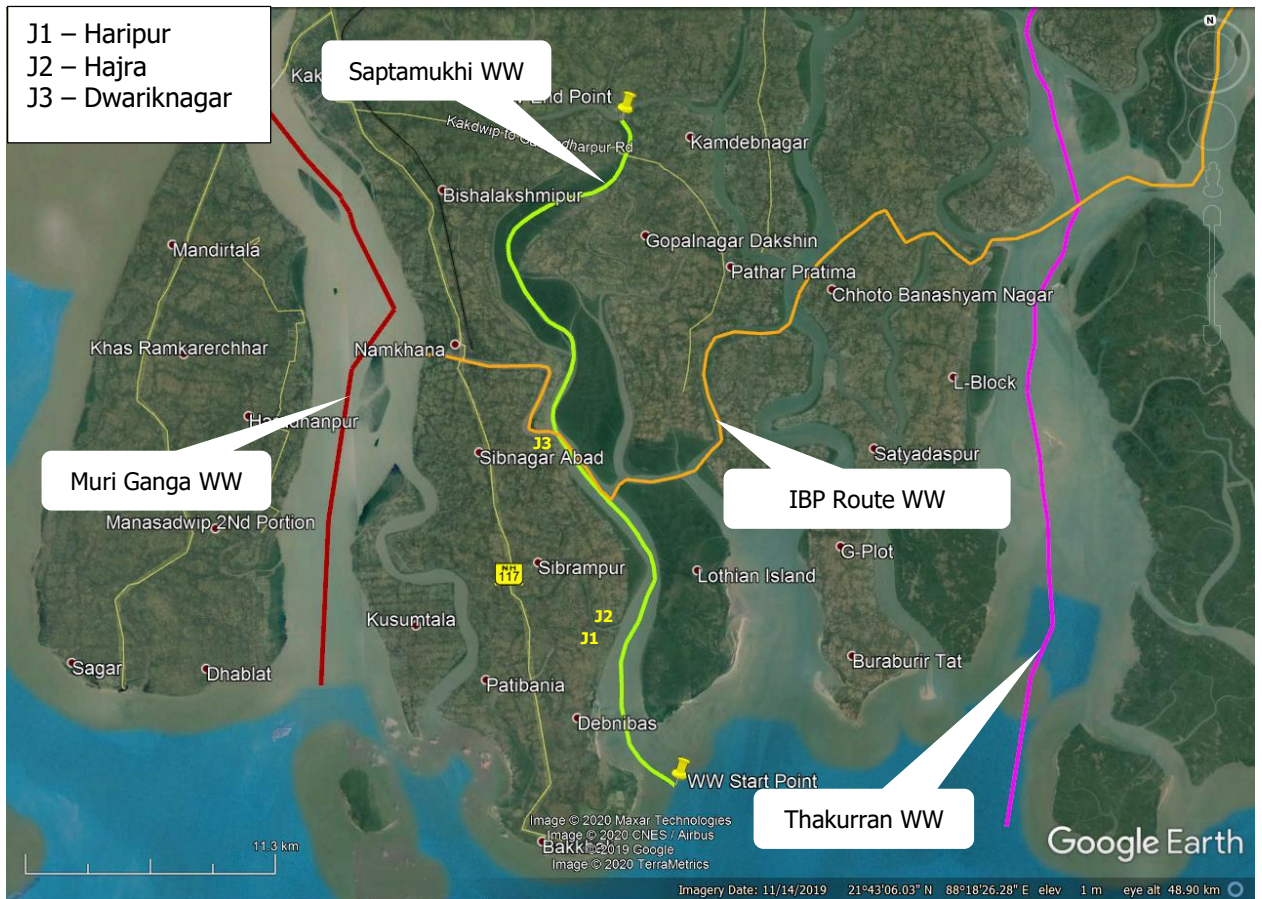

Figure 35: Location map of terminals proposed for development

5.3.2 IWT Facilities

Steel ferry vessel of 25 passenger capacity is considered for design of passenger ferry terminal. It is proposed to provide following facilities at the proposed ferry ghat locations:

- 1) Pontoon
- 2) Gangway

A. LAYOUT

A single floating pontoon platform is provided for berthing of ferries at each site capable of handling all types of proposed ferry vessels. A gangway is also provided linking the berthing pontoon to the shore, allowing pedestrian transfer between the shore and the ferries.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The ferry platform are intended for use by vessels operating on regular ferry services to other ghats along the waterway and further afield, but the designs do not preclude use by other vessels.

B. Gangway

16 m long x 2.2m wide Gangway is proposed to provide necessary link between the pontoon platform and the shore platform.

C. PONTOON

A pontoon also known as a floating bridge/platform uses floats or shallow-draft boats to support a continuous deck for pedestrian and vehicle travel. The buoyancy of the supports limits the maximum load they can carry. The level of the pontoon will vary as per the tide variations. Floating pontoon shall provide the support to the other end of the approach bridge and also provide berthing to the passenger ferries. The pontoon is to be stationed at proposed terminal locations along river. The pontoon will be moored at site via sets of catenary and anchors. The pontoon shall be suitably chained anchored to the river bed for the horizontal & vertical stability.

The pontoons shall be as per Indian Register of Shipping rules / regulations for dumb barge / pontoon applicable to inland waters. The pontoon shall be designed and built in accordance with the requirements of the rules and regulations of:

- IRS (Indian Register of Shipping) or any Classification Society who is member of International Association of Classification Society (IACS)
- The Inland Vessel Act 1917 and as amended in 2007.

The Pontoon shall comply with IMO's stability requirements. The Pontoons shall not have any trim by fore in any of the operating conditions at terminal. The pontoon shall be shaped with rounded corners and swims ends. The hull shall be divided into watertight subdivisions for the stability.

The steel to be used for the construction of the pontoon shall comply with IS 2062 Grade B or equivalent. The welding works shall be of excellent quality and using high quality electrodes and shall be done by certified welders. Necessary hull preservation and painting shall be done for the prevention of corrosion. Draft marks shall be suitably placed on pontoon of 3 mm in welded steel plate and painted with at least two coats. They shall be located at intervals of 200 mm vertical (P&S) and at forward aft and amidships. The accuracy of these marking will be checked & verified.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Pontoon of 10m x 20m size is considered DPR design and costing. It is envisaged that pontoon will be used for berthing of ferry vessels, to support one end of gangway and to provide passage for passengers from terminal building to ferry through gangway.

No waiting/halting of passengers is recommended on pontoon. The pontoon shall be designed to encounter current of maximum 2m/sec during flood. Suitable mooring arrangements along with anchors shall be provided along the sides. The winches, anchor chain, mooring ropes, shackles etc. shall be as per the class requirement.

The Steel fenders shall be of min. 300 mm dia (6 mm thick) shall be placed on either sides for 95 percent of the length of pontoon. Tyre fenders of sufficient size shall also be provided on both sides in such a manner that the spacing between them does not exceed 1250 mm. Lugs of not less than 16 mm to tie up these tyres shall be welded to the sides. Pipe Bollards of about 20-25 ton capacity are proposed for safe mooring operations.

D. SAFETY

The Pontoon and Gangway are provided with appropriate safety equipment including lifesaving equipment, ladders and safety rails. The passenger's walkway will be marked in lanes as appropriate and signs will be installed to direct. A detailed set of procedures will be prepared for the safe operation of the link between the ferry and the shore. A fendering system on pontoon will be incorporated to cater for both normal berthing impacts and abnormal accidental ferry impact.

5.4 LAND DETAILS

No additional land is required to be acquired for construction or installation of Pontoon and Gangway, as the ferry ghats are already operational at the proposed locations.

5.5 GEOTECHNICAL INVESTIGATIONS

For preliminary engineering design, the data about soil characteristics is collected from the local sources based on the basis of structure constructed near by. On the basis of visual inspection as observed during site visit the top layer of the area (around 2.5 m depth) is covered with fine river sand. During project execution, detail geotechnical investigation may be done for detail engineering.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

5.5.1 Regional Geology

The district of South 24-Parganas is covered with recent alluvium, which is of great depth. Once a boring was conducted near Akra Road, Garden Reach which found no signs of rocky bottom or marine beds even when dug at a depth of 1,306 feet. In the eastern and central parts, the surface soil is chiefly a clayey loam with some peaty patches in the marshy areas. Surface soil in the Sundarbans area is heavy clay impregnated with salt. The borings conducted in the region indicate that the alluvium of the area consists of alterations of clay, sand and silt. Kankar (very tiny pieces of stone) is mixed with sands and clays. Even the stumps of sundri trees have been found at Sealdah in Kolkata at various levels down to a depth of thirty feet.

5.5.2 Physical Condition and Drainage

The drainage capabilities of the canals, rivers etc. located in the district have been reduced due to unplanned manmade activities and some ecological changes like silting of the rivers etc. So, the flood/heavy water logging has been common occurrence every year in the most parts of the aforesaid sub-divisions. Similarly, Cyclone and High tide has been commonly found in the riverine belts.

5.6 COSTING

As part of collective development of NW-97, an optimised approach for infrastructure development is proposed herewith. Accordingly, operating buildings and corresponding mannings proposed in NW-97 are provided as below:

| Sl. No. | Name of waterway supported by proposed operating building and corresponding Manning | Name of Jetty/Terminal where Operating Building and corresponding Manning is proposed | Name of waterway in which cost of operating building and corresponding Manning is considered |
|---------|---|---|--|
| 1. | Muri Ganga waterway | Dhaki Jetty | Thakurran waterway |
| 2. | Saptamukhi waterway | | |
| 3. | Thakurran waterway | | |
| 4. | Matla waterway | Basanti Jetty | Hogla waterway |
| 5. | Bidya waterway | | |
| 6. | Gomar waterway | | |
| 7. | Hogla waterway | | |

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sl. No. | Name of waterway supported by proposed operating building and corresponding Manning | Name of Jetty/Terminal where Operating Building and corresponding Manning is proposed | Name of waterway in which cost of operating building and corresponding Manning is considered |
|---------|---|---|--|
| 8. | Chhota Kalagachi waterway | Bhandarkhali Jetty | Sahibkhali waterway |
| 9. | Raimangal waterway | | |
| 10. | Sahibkhali waterway | | |
| 11. | Katakhali waterway | | |
| 12. | Kalindi waterway | | |

Hence, for Saptamukhi waterway, the Operating Building and corresponding manning proposed at Dhaki Jetty along Thakurran waterway is recommended to support the operational activities of all the ferry terminals proposed in Saptamukhi waterway. The cost estimate for proposed ferry terminals including O&M of the system has been worked out. The cost estimates for development of the system are considered as Capital cost while for operation of the system is termed as maintenance or operating cost (O & M cost).

5.6.1 Capital Cost

For Saptamukhi waterway only pontoon and gangway facilities are proposed to be developed at Haripur, Hajira and Dwariknagar ferry ghats. Facilities at Haripur and Hajira ferry ghats are proposed for crossing the river only and as such is recommended that all basic amenities of terminal structure like parking, ticketing etc. shall be locally handled. Further, the facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route. Accordingly, no additional facilities are envisaged to be provided at above three ferry ghats. Capital cost for proposed ferry terminal is provided in **Table 23** respectively.

Table 23: Capital Cost for Each Ferry Terminal

| Sl. No. | Facilities | Unit | Quantity | Unit Rate (INR) | Cost (INR Lakh) |
|--------------|---|------|----------|-----------------|-----------------|
| 1 | Pontoon Platform with all required accessories | No. | 1 | 50,00,000 | 50.00 |
| 2 | Gangway (Including Maintenance) | No. | 1 | 17,50,000 | 17.50 |
| Total | | | | | 67.50 |
| 3 | Cost of Detail Engineering and construction supervision | | | 6% | 4.05 |

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sl. No. | Facilities | Unit | Quantity | Unit Rate (INR) | Cost (INR Lakh) |
|--|--|------|----------|-----------------|-----------------|
| Total | | | | | 71.55 |
| 4 | Contingency | | | 3% | 2.15 |
| Capital cost of each Pontoon and Gangway system | | | | | 73.70 |
| 5 | Number of Jetties proposed to be developed | | | | 3 |
| Total Capital cost of proposed Pontoon and Gangway system for all ferry ghats | | | | | 221.09 |

Hence, total capital cost for facilities proposed to be developed at all ferry ghats works out as **INR 221.09/- Lakh**.

5.6.2 O&M Cost

Operation and Maintenance cost to be incurred for running Pontoon and Gangway facilities for ferry ghats are provided as below.

a) Maintenance

To ensure that the Pontoon and Gangway facilities are kept in an efficient and safe condition, it will be necessary to ensure that money is set aside for annual maintenance. In the first four years of operation, maintenance costs are comparatively low but would then build up as structures and equipment begin to be affected by wear and tear.

The annual cost of maintaining Pontoon and Gangway including all civil, mechanical and electrical works is considered to be about 3% of the capital cost. Thus, the annual maintenance cost for proposed facilities works out as **INR 6.63/- Lakh**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

6.0 PRELIMINARY ENGINEERING DESIGNS

The main objective of preliminary engineering is to ascertain quantitatively the feasibility of engineering works. Preliminary engineering is carried out to arrive at the preliminary sizing of all major facilities required at the jetties and waterway for safe navigation. The preliminary sizing, design and engineering of the facilities are presented in following sections.

6.1 RIVER TRAINING

As stated in the earlier sections, no river training works including barrages, weirs or locks is required for the waterway.

6.2 BANK PROTECTION

As stated in the earlier sections, no bank protection works is required for the waterway.

6.3 NAVIGATION AIDS

The total navigation operation, ranging from arrival to departure, can be subdivided in to the following operations,

- Navigation through the waterway
- Arrival at berthing location
- Preparation for berthing, including possible turning of the vessel and pre-berthing procedures
- Berthing including mooring, etc. to the berth structure
- Loading and unloading operation while at berth
- Departure

Navigation aids for the waterway and terminals are required to ensure safe and efficient navigation of vessels navigating through the waterway and berthing/un-berthing at terminals.

These aids are proposed to be installed on land or in water for guidance to all vessels for safe and regulated navigation in channels, basin, berths and docks. The various types of aids to navigation proposed for IWT operation on proposed waterway is provided in detail in Chapter 8.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

6.4 FERRY TERMINAL AND JETTIES

Preliminary engineering design required for DPR level costing and analysis for Pontoon and Gangway are done and provided as below. Following codes and standards are used for preliminary design of structures.

Civil Works:

- IS 4651 (Part 1-5): Codes of Practice for Planning and Design of Ports and Harbors
- IS 456 - 2000: Code of Practice for Plain and Reinforced Concrete
- IS 800 – 1984: Code of Practice for General Construction of Steel
- IS 2911: Code of Practice for Design and Construction of Pile Foundations
- IS 1893 – 2002 (Part 1): Criteria for Earthquake resistant design of Structures
- IS 9527 (Part 3): Code of Practice for Design and Construction of Port and Harbor Structures
- IRC-6: Standard Specifications and code of Practice for Road Bridges, Section 2 Loads and Stresses

Geotechnical

- IS 2991 (Part 1 – Sec 2) 2010: Code of Practice for Design and Construction of Pile Foundations – Bored Cast in-situ Piles
- IS 14593 - 1998: Design and Construction of Bored Cast in-situ Piles founded on Rocks-Guidelines

Where applicable the following International Standards are referred

- BS 6349 Maritime Structures
- BS 8110 & 5400 Reinforced Concrete Structures
- BS 449 & API-RP 2A-WSD Offshore Platforms-Working Stress Design
- BS 5950 Structural Steel Work
- BS 8004 & 8000 Foundations
- MJ Tomlinson: Pile Design and Construction Practice, Fourth edition
- Joseph E Bowles: Foundation Analysis and Design, Fifth edition.

6.4.1 Ferry Terminal

The objective of this chapter is to present design of river & landside facilities required for development of Pontoon and Gangway. The following are the main facilities required for operation of the terminal:

- Gangway
- Pontoon Platform

A. STRUCTURAL SYSTEM

The overall Layout showing location of facilities is shown in drawings provided in Volume 2 of the DPR.

The gangway is aluminium/steel platform hinged on the approach platform and pontoon platform on the other end.

B. CONSTRUCTION METHOD

The construction method proposed for approach platform is as described below:

PILING

- 1) Drive steel liner up to refusal.
- 2) Bore inside the liner up to the founding level.
- 3) Lower Reinforcement cage and concrete the pile up to bottom of Pile muff.
- 4) Place sacrificial precast pile muff over the piles and concrete the annular space between the pile and pile muff.

ERECTION & CONCRETE WORK

- 1) After the in-situ concrete attains strength, place the precast pile cap U beams over the Pile muffs. Note that the Precast U beams are designed as part of permanent structure.
- 2) Concrete inside the U beam upto the soffit level of bottom slab.
- 3) After the in-situ concrete attains strength place precast planks and precast Fender wall panel over the U beams.
- 4) Cast the in-situ portion of the bottom slab.
- 5) On completion of concrete works fixtures like fenders, bollards, pipes and cable support system shall be installed

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

6) All equipment, pipes, cables, light poles shall be installed at the end.

6.5 Construction Schedule

The time schedule for construction activities of the project is considered as one (1) years. The proposed project schedule is provided in **Figure 36**.

| Sl. No. | Activities | 1 st Quarter | 2 nd Quarter | 3 rd Quarter | 4 th Quarter |
|---------|--|-------------------------|-------------------------|-------------------------|-------------------------|
| 1 | Approval of DPR and Project Financial Closure | | | | |
| 2 | Environmental, Forest and CRZ clearances | | | | |
| 3 | Fairway development | | | | |
| a) | Procurement of Hardware and other equipment's | | | | |
| b) | Capital Dredging | | | | |
| 4 | Procurement and installation of Aids to Navigation | | | | |
| 5 | Construction/ Installation of Pontoon and Gangway | | | | |
| 6 | Upgrading existing road to terminals | | | | |

Figure 36: Construction Schedule.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

7.0 VESSEL DESIGN

The major principal parameters governing Inland Waterway Fleet designs are:

- Terminal facilities and obstructions enroute,
- Waterway characteristic like river course, depth of water, radius of bends, current/velocities of water etc.,
- Navigational aspects and improvements to navigation,
- Cargo characteristic like type of cargo, quantum of cargo and distance of transportation,
- The vessel dimension like length, beam, moulded depth, minimum and maximum draft,
- Haulage distance
- Physical constrains like clearance under bridges, navigation locks size etc., and
- Capital, operation and maintenance cost.

7.1 GENERAL REVIEW

India has a long history of river based water transport. India has about 14,500 km of navigable waterways which comprise rivers, canals, backwaters, creeks, etc. Currently, inland water transport is restricted to a few stretches in the Ganga-Bhagirathi-Hooghly Rivers, the Brahmaputra, the Barak River, the rivers in Goa, the backwaters in Kerala, inland waters in Mumbai and the deltaic regions of the Godavari-Krishna rivers. Besides the organised operations by mechanised vessels, country boats of various capacities also operate in various rivers and canals. Data of cargo and passenger movement in unorganised sector (i.e. by country boats, etc.) has not been compiled (for which efforts are on) but it is a fact that substantial quantum of cargo and passengers are transported in the unorganised sector as well. Considering the inherent advantages of this mode in terms of fuel efficiency, environment friendliness and cost effectiveness, the Govt. of India is trying to develop this mode to make it an effect supplementary mode of transportation vis-a-vis rail and road modes.

7.2 CURRENT SCENARIO

Ferry and small cargo vessels are already operational in Saptamukhi river. The photographs of existing vessels plying along the waterway are provided in **Figure 37**. Ferry boats having approximate dimensions of about 16.0 m long, 2.5 m breadth and 1.0 m depth are used for movement of passenger and small cargos. The existing vessels lack the basic safety gears and communication equipments. Hence, vessels with required safety and communication equipments are proposed along the waterway.

Figure 37: Vessels plying on Saptamukhi Waterway

7.3 PASSENGER TRAFFIC AT PROPOSED LOCATIONS

As detailed in chapter 4, the passenger traffic at proposed loactions as obtained from traffic survey done in March 2017 are provided as below:

Table 24: Passenger Traffic at Proposed Locations

| Sl. No | Proposed Ferry Ghat | Average daily passenger traffic |
|---------------|----------------------------|--|
| 1. | Haripur ferry ghat | 200 |
| 2. | Hajra ferry ghat | 200 |
| 3. | Dwariknagar ferry ghat | 30 |

Facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route. Accordingly, O-D pair of Haripur to Hajra ferry ghat is considered for vessel design.

The tentative hourly variation of passenger traffic at proposed loaction for 12-hour waterway operations from 6:00 AM to 6:00 PM, on the basis of collected data are presented as below

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Figure 38: Hourly Passenger Traffic

7.4 DESIGN BASIS

The type and size of vessels proposed to be operated in the waterway is designed on the basis of following factors:

- Cargo Characteristics
- Cargo Factors
- Waterway and Other Features
- Operational Factors

7.4.1 Cargo Characteristics

Cargo considered for DPR design of the proposed waterway consists of passengers including small cargo like bikes, cycles and agricultural goods. The total volume of cargo originating and terminating from different terminal is shown in Traffic Studies chapter.

7.4.2 Waterway and Other Features

Field investigations done in the total stretch of the river bring out the following characteristic of the waterway which shall influence selection of the vessel for transportation.

- Shoals located along the waterway.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Complete stretch of waterway is tidal.

Hence, the waterway condition during low tide would dictate the selected vessel to have shallow draft to ensure un-interrupted navigation.

7.4.3 Operational Factors

The following factors are generally considered as operational factors in the process of study on vessels for IWT.

- Speed of vessel under varying hydraulic condition,
- Relation between speed, propulsive power and energy consumption,
- Rate of embarkment and dis-embarkment of passengers.
- Number of unworkable days per year, and
- Susceptibility of vessel to damage and crew efficiency.

7.5 PROPOSED VESSEL SIZE AND SPECIFICATIONS

Passenger ferry services are proposed along the waterway at locations detailed above. As per the bathymetric survey, draft available in proposed stretch of waterway is in the range of -9.61 m to 26.27 m w.r.t sounding datum for Class VII waterway.

The ferry boats shall be of a design combining reliability, fuel efficiency, low environmental impact (low wash), safety and comfort. The vessels should be based on environmental and climatic change friendly designs to improve energy efficiency and reduce the environmental footprint. Possible features could include, but not limited to, using alternate clean fuels, use of solar modules for ancillary energy needs (lights) on ferries.

The ferry boats shall be equipped with an Intelligent Transport and Navigation System. The ferry boats shall be compliant with the rules and contents of a member of the International Association of Classification Societies (IACS) and the Inland Vessels Rules of State as well as Central Authorities.

The major parameters, considered for proposing suitable and optimized passenger ferry vessel for the waterway are hull material, hull form, propulsions system, steering system Shipboard Systems, Environmental Friendliness, etc. The brief characteristics of vessels categories applicable for Inland waterways are presented in below table:

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Table 25: Characteristics of Vessel Categories

| Vessel Type | Category | Pax Capacity | Vehicle Capacity | Max Speed (knots (nautical miles/hour)) | Horsepower | Hull Type |
|-------------------------|----------|--------------|------------------|---|-------------|-------------|
| Passengery Ferry | 1 | 12-30 | | 16-25 | 115-375 | Mono |
| Passengery Ferry | 2 | 31-50 | | 8-24 | 180-700 | Pontoon |
| Passengery Ferry | 3 | 31-50 | | 12-30 | 180-850 | Mono or Cat |
| Passengery Ferry | 4 | 51-100 | | 8-20 | 230-900 | Mono or Cat |
| Passengery Ferry | 5 | 51-100 | | 21-38 | 525-2100 | Mono or Cat |
| Passengery Ferry | 6 | 101-150 | | 10-20 | 225-1800 | Mono |
| Passengery Ferry | 7 | 101-150 | | 21-35 | 900-4000 | Cat |
| Passengery Ferry | 8 | 151-300 | | 8-37 | 400-7200 | Mono |
| Passengery Ferry & RORO | 9 | 25-100 | 2-15 | 5-15 | 100-1000 | Mono |
| Passengery Ferry & RORO | 10 | 100-500 | 2-10 | 9-15 | 500-3000 | Mono |
| Passengery Ferry & RORO | 11 | 100-500 | 10-50 | 9-15 | 285-4500 | Mono |
| Passengery Ferry & RORO | 12 | 250-500 | 50-100 | 39-42 | 19300-22600 | Mono |

The above types of vessels generally have one of three hull types – monohull, catamaran, or pontoon. Monohulls are a traditional hull design that are often used for slower speed services. Monohulls can be designed for high speeds, but generally more engine power is required to reach the same top speed with a monohull than with a catamaran hull. RORO ferries are almost always monohulls. Catamarans are often used for higher speed services. They require less power, and thus less fuel to travel at the same speed as a monohull, and provide a more stable ride for passenger comfort. Pontoons are more affordable than other hull types, but generally only carry 30-50 passengers and cannot travel at high speeds.

Transport department of Government of West Bengal is operating regular ferry services in the state, to provide, clean, safe and faster mode of transport system. The list of various ferry service operators and number of water crafts for the ferry trips operating by Government of West Bengal (excluding private operators) in the Hooghly River are provided in **Figure 39**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

| List of various Ferry Service Operators and number of water crafts for the ferry trips : | |
|--|---|
| <ol style="list-style-type: none"> 1. WBSTC Ltd. (A Govt. West Bengal undertaking). 2. HNJPSS (Hooghly Nadi Jalapath Paribahan Samabay Samity Limited). 3. Ghatal Steam Navigation Company (private operator). 4. Indo Swiss Waterways Company (private operator). | |
| Name of operator | Number of steel vessel with capacity of passengers |
| WBSTC Ltd. | 16 steel vessels of capacity for 400 passengers 2 steel vessels of capacity for 250 passengers 2 Steel vessels of capacity for 150 passengers |
| HNJPSS | 14 steel vessels of capacity for 400 passengers 6 steel vessels of capacity for 250 passengers 4 steel vessels of capacity for 150 passengers 10 wooden vessels of capacity for 100 passengers |
| Ghatal Steam Navigation Company | 1 steel body vessel of capacity for 150 passengers 1 wooden vessel of capacity for 100 passengers |
| Indo Swiss Waterways Company | 2 steel vessels of capacity for 150 passengers |
| Note – | It has been decided that the jetties at Bandhaghat in Howrah and Ahiritala in Kolkata will be renovated by Kolkata Port Trust. Ghatal Steam Navigation Company & Indo Swiss Waterways Company are operating the ferry service at these ferry ghats on contact basis from the Kolkata Port Trust. Kolkata Port Trust has been informed |

Figure 39: Ferry Services in the river Hooghly between Kolkata and Howrah⁵

7.6 TURNAROUND TIME

Turnaround time for ships is defined as the length of time between arriving at a point and being ready to depart from that point. It is used in this sense for the loading, unloading, re-fuelling, and re-arming of vessels.

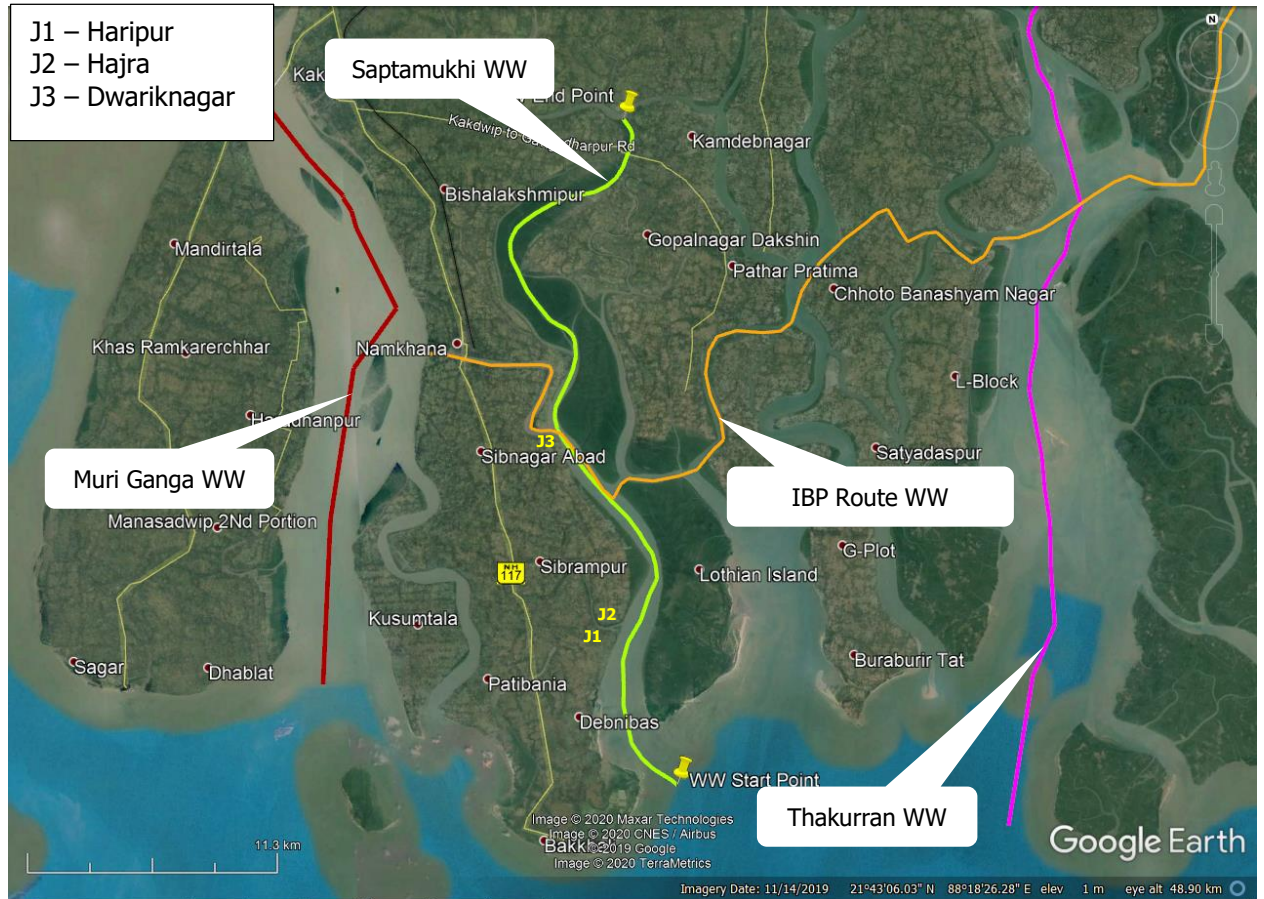

Turnaround time varies with type of vessel, efficiency of jetties and available cargo handling facilities on the jetties. Turnaround time for passenger ferry vessel is discussed in detail in following paragraphs.

For Saptamukhi waterway, Hajra and Haripur ferry ghats are developed to provide safe and reliable IWT infrastructure for crossing the river. Accordingly, for calculation of turnaround time in Saptamukhi

⁵ <http://transport.wb.gov.in/transport-services/ferry-services/passenger-ferry-services/>

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

waterway, the trip length of about 0.2 Km between both the ferry ghats as shown below, is considered.

7.7 NUMBER OF VESSEL REQUIRED

Number of vessel required to ply on route is estimated and provided in **Table 26** as below.

Table 26: Estimate of No. of vessel required for Passenger Ferry Service

| Sl. No. | Description | Unit | Value |
|---------|--|---------|-------|
| A | Cruising Speed of vessel considered | Knot | 5 |
| B | Length of the waterway considered for ferry services | Km | 0.20 |
| C | Time required by vessel to travel in proposed waterway stretch | minutes | 5.00 |
| D | Embarking and Dis-embarking time considered for 2 terminals | minutes | 10 |
| E | Trip duration (sl. no. C + sl. no. D) | hours | 0.25 |

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sl. No. | Description | Unit | Value |
|---------|--|------------|-------|
| F | Operating hours per day (as per information collected on site) | hours | 12 |
| G | No. of trips allowed during 12 hours operational time per day per vessel (sl. no. F / sl. no. E) | trips | 48.00 |
| H | Considering Passenger ferry vessels with capacity as | pax/vessel | 25 |
| I | Present passenger's traffic | pax/day | 200 |
| J | Required no. of trips per day for current passenger traffic (sl. no. I/ sl. no. H) | trips | 8.00 |
| K | Number of Ferry vessel required for current passenger traffic demand (sl. no. J/ sl. no. G) | numbers | 0.17 |
| L | Design passenger traffic in 20 th year | pax/day | 1087 |
| M | Required no. of trips per day for design passenger traffic (sl. no. L/ sl. no. H) | trips | 43.49 |
| N | Number of Ferry vessel required for design passenger traffic (sl. no. M/ sl. no. G) | numbers | 0.91 |
| | | | |
| O | Proposed number of ferry vessels for present passenger traffic | numbers | 1.00 |
| | | | |
| P | Proposed number of ferry vessels for design passenger traffic of 20 th year | numbers | 1.00 |

Accordingly, for Saptamukhi waterway, it is proposed to provide ferry vessel of 25 passenger capacity. For DPR purpose, it is considered that for present traffic demand, one (1) numbers of vessel is proposed from the start date of operation. The tentative technical details for the proposed vessels of 25 passenger capacity for Saptamukhi waterway are as below:

- a) Type – Fibre boat
- b) Length – 18.0 m
- c) Breadth – 3.0 m
- d) Depth – 1.58 m
- e) Draft – 0.8 m
- f) Engine capacity – as per design with conventional propulsion
- g) Cruising Speed – 5 knot

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

For proposed passenger ferry services in the waterway, passenger ferry vessels built in house by WBTIDC or other local vessel manufacturer are proposed. DPR consultant has only considered conventional vessels at this stage to keep the start-up risk to a minimum.

7.8 VESSEL COSTING

The cost of operating a ferry is made up from a number of component parts. In keeping with generally accepted principals and methods for the financial analysis of transportation business entities, total expenses (cash outflows) are classified into three mutually exclusive categories of capital costs, direct operating costs and indirect operating costs. Vessel debt repayment includes principal and interest payments on the portion of the vessel purchase price not funded by the equity investment of the owners. Direct operating costs are defined here as vessel direct operating costs, which include crew costs (in this case deck and engine crew only, excluding passenger service crew), fuel and lubricant costs, and vessel maintenance. Indirect operating costs are defined here as including insurance, marketing, advertising, and general administration.

7.8.1 Capital Cost

The cost to purchase the vessels, whether they are new or second hand, represents a significant commitment for the ferry operating company. For passenger ferry services, vessels need to be procured. For the purpose of estimating a capital cost for vessels proposed to be operated in the waterway, the price data were compiled from a variety of sources including newspaper archives, marine industry magazines, other ferry cost studies, and discussions with ferry operators. Vessel purchase prices vary greatly, and many vessels are built to meet particular specifications, which are not always made clear when prices are reported. **Figure 40** shows the range of purchase prices found for new vessels in each vessel category.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

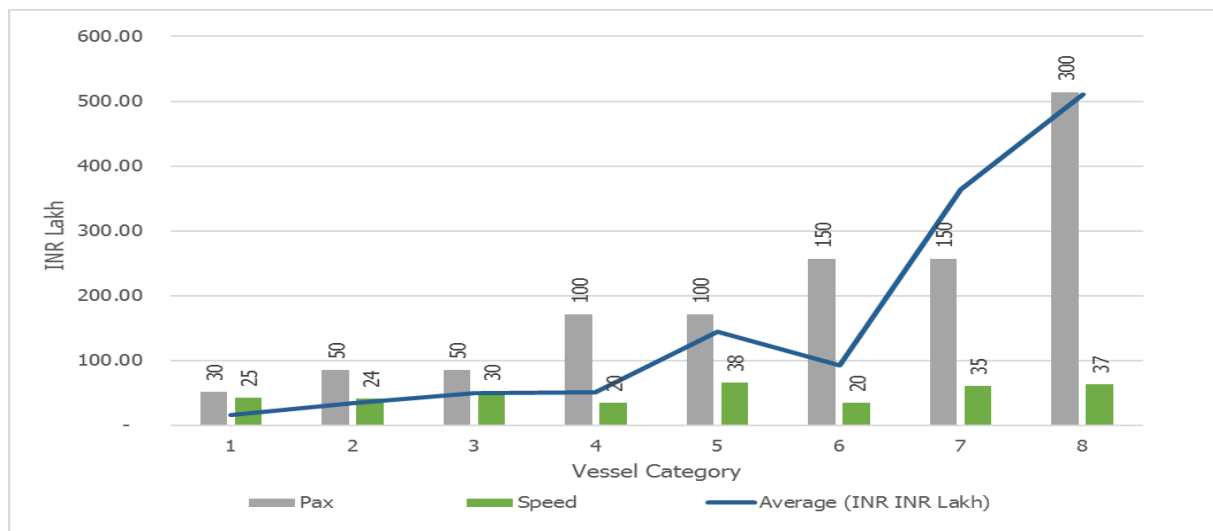

Figure 40: Graph showing variation in Vessel cost w.r.t passenger capacity and speed

Accordingly, for passenger ferry vessel of 25 pax capacity, the capital cost considered is provided in table below:

Table 27: Capital Cost of Vessels

| Sl. No. | Description | Rate per Vessel (INR Lakh) | No. of Vessels | Total Cost for vessels (INR Lakh) |
|---------|------------------------|----------------------------|-------------------------------------|-----------------------------------|
| 1. | Passenger Ferry Vessel | 35.00 | 1 (from start date of operation) | 35.00 |

7.8.2 O&M Cost

The O&M cost of vessels are estimated as below:

a) Officers and Crew Costs

One team has been allocated for each vessel to enable continuous operation of vessels for 12 hours depending upon traffic flow. Each crew team comprise of members for running/operating of vessel and on-board safety and security in accordance with the Inland Vessel (IV) Act, 1917. Total nos. of crew members proposed is provided as below:

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sl. no. | Type of Crew | Level/ Classification | Reference | Min Gross Salary (INR/ month) | Annual Gross Salary (INR) | Number | Annual Cost (INR Lakh) |
|--------------|---|-----------------------|--|-------------------------------|---------------------------|----------|------------------------|
| 1. | One master with Master Class 3 / Serang certificate | L-2 | 7th pay commission pay matrix | 19900 | 2,38,800 | 1 | 2.39/- |
| 2. | General Purpose Ratings for attending duties of deck hands & engine hands | Unskilled | West Bengal Minimum rates of wages w.e.f July 2020 | 8550 | 1,02,600 | 1 | 1.03/- |
| Total | | | | | | 2 | 3.41/- |

Hence, for each vessel 2 crew members are required with annual cost of INR 3.41/- Lakh.

b) Consumables and Repair/Maintenance Cost

Maintenance cost of about 2% per annum of capital cost is considered under this head. Hence, annual consumables and repair/maintenance cost works out to INR 0.70 Lakh for each vessel.

c) Fuel Cost

Fuel expenses for running passenger ferry vessels in the proposed fairway is estimated as below:

| | |
|--|---------------------------|
| Number of days of operation in a year | = 300 days |
| Number of trips in a day per vessel | = 48.00 trips |
| Mobility time per trip | = 5.00 minutes |
| Approximate rate of fuel per litre | = 75 INR per litre |
| Fuel cost per round trip for each vessel | = INR 75.00/- |
| Fuel cost per annum for each vessel | = INR 5.40 Lakh per Annum |

Table 28: Annual O&M cost of Vessels

| Sl. No | Item | Annual O&M Cost for each vessel (INR Lakh) |
|--------|------------------------|--|
| 1. | Officer and Crew Costs | 3.41 |

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sl. No | Item | Annual O&M Cost for each vessel (INR Lakh) |
|---------------|---|---|
| 2. | Consumables and Repair/Maintenance Cost | 0.70 |
| 3. | Fuel Cost | 5.40 |
| | Total | 9.51 |

Hence, total O&M cost for running one (1) vessel is INR 9.51 Lakh per year.

8.0 NAVIGATION AND COMMUNICATION SYSTEM

In SOLAS-V/13 ("Safety of navigation" IMO, 1974), IMO established that each State shall provide the aids to navigation appropriate to the level of traffic and the degree of risk. International Association of Lighthouse Authorities (IALA) defines aids to navigation as systems external to the ship capable of helping determine its position and course, warning about dangers and obstacles and indicating the best route to follow.

As defined by IMO, the absolute horizontal accuracy of aids to navigation regarding vessel position on inland waterways should be 10 metres, with a probability of 95%. The accuracy of nautical charts is also very important. The national authority responsible for their publication must work in coordination with the body responsible for aids to navigation. In the particular case of restricted waters, the nautical chart scale is 1:10 000, requiring an accuracy of 10 m (IALA-AISM, 2014).

Aids to navigation include visual aids (lighthouses, beacons, buoys and leading lines), electronic navigation (AIS, DGPS, VTMS etc.), a pilotage service and traffic organisation boats.

The objectives of e-navigation are: to facilitate the safe navigation of vessels with regard to hydrographical, meteorological and navigation information, facilitate maritime traffic management, facilitate communication and provide opportunities to improve the efficiency of transport and logistics. E-navigation is a concept that incorporates systems and services.

8.1 GENERAL REQUIREMENTS

The information system for navigation and communication aims to improve the navigational capability and safety in the inland waterways, key points of River Information System are:

- The information system will help to track the real time position of ships plying on the inland waterways
- The system will also provide real time weather reports and help in building communication among the vessels
- Under the project, radars and sensors will be installed in boats and river ports
- The information will be sent via Very High Frequency (VHF) wireless communication between the operators and the user

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

For safe navigation of the ships through the waterway, state of the art navigation and communication system are to be provided in the waterway stretch. These services should be supported by currently available technical systems like:

- Mobile radio communication systems for inland navigation (VHF radio)
- Ship and shore based radar
- Mobile data communication systems
- Global navigation satellite system (GNSS)
- Internet
- Electronic chart and display and information system for inland navigation (Inland ECDIS)
- Automatic identification system for inland navigation (Inland AIS)
- Ship reporting systems.

8.1.1 VHF / HF

One of the main characteristics of the River Information Service is efficient and reliable flow of information. It can be effectively achieved in real time through VHF communication, which is of key importance in maritime navigation and has been implemented to meet the requirements of inland waterway shipping services.

VHF communication is in use in inland navigation to ensure safe flow of information among vessels and services coordinating SAR operations within the RIS operation range.

The RIS operating centre is proposed to be located in one of the terminal building. Within a usable floor area of 200 sq. m, a room shall be arranged for the maintenance of constant radio watch by three system operators who can control the system modules. The foreground item of the equipment's will be a display consisting of six LCD screens.

It will display a view of the AIS and views from CCTV cameras, which, combined, support real time view of the situation on the waterway. The RIS Centre shall also provide electronic charts for the purposes of the Inland ECDIS, transmits Notices to Skippers (NtS), receives ERI messages and ensures system users reliable VHF radio communication. Signals received by VHF radio stations are transmitted directly to the RIS Operating Centre via a relay network.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

8.1.2 DGPS

The Differential Global Positioning System (DGPS) is an enhancement to GPS that improves accuracy to under 3 metres, by means of a ground-based network of reference stations. It is proposed that all vessels should be equipped with latest DGPS equipment's to track the time positional accuracy of vessels.

One DGPS station is proposed at Canning with an effective radial coverage of about 125 km, as part of development of Sunderbans waterways and to cater all the 13 national waterways proposed under Sunderbans waterways (NW 97) as shown in **Figure 41** below. Radial distance of canning from farthest point in Saptamukhi waterway is about 87 Km. The capital and O&M cost of proposed DGPS system at Canning is considered in DPR of Matla waterway.

Figure 41: Google Earth image showing location map of proposed DGPS and effective coverage

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

8.1.3 RIS / AIS / Radar / VTMS

An objective is the description of intention. The objective may also be called the goal or aim. RIS have three main objectives:

1) Transport should be *safe*:

- Minimise injuries
- Minimise fatalities
- Minimise voyage incidents

2) Transport should be *efficient*:

- Maximise throughput or effective capacity of waterways
- Maximise the carrying capacity of vessels (length, width, draught and height)
- Reduce travel time
- Reduce workload of RIS users
- Reduce transport costs
- Reduce fuel consumption
- Provide efficient and economical link between transport modes
- Provide efficient harbours and terminals

3) Transport should be *environmentally friendly*:

- Reduce environmental hazard
- Reduce polluting emissions and spills due to accidents, illegal actions or normal operations

These objectives should be met under the constraints that all RIS are supplied in a manner that is reliable, cost efficient and legally sound.

As part of collective development of NW-97, Sunderbans waterways, following RIS stations are proposed with radial coverage of 25 Km. The proposed RIS stations will serve following waterways as shown in table below and accordingly the cost is considered in the waterway as provided below:

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Table 29: Details of RIS stations proposed in NW-97, Sunderbans waterways

| RIS Station No. | Proposed location of RIS station | | | Waterway covered by proposed RIS | Reach length in Km | Chainage from Km | Chainage to Km | Waterway incorporating cost of proposed RIS |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Hence, the proposed RIS stations to be set up near Bhagabatpur (21°43'31.48"N, 88°18'33.06"E) will cover the complete stretch of proposed Saptamukhi waterway as shown in **Figure 42**.

The capital and O&M cost of proposed RIS at Bhagabatpur is considered in this DPR of Saptamukhi waterway.

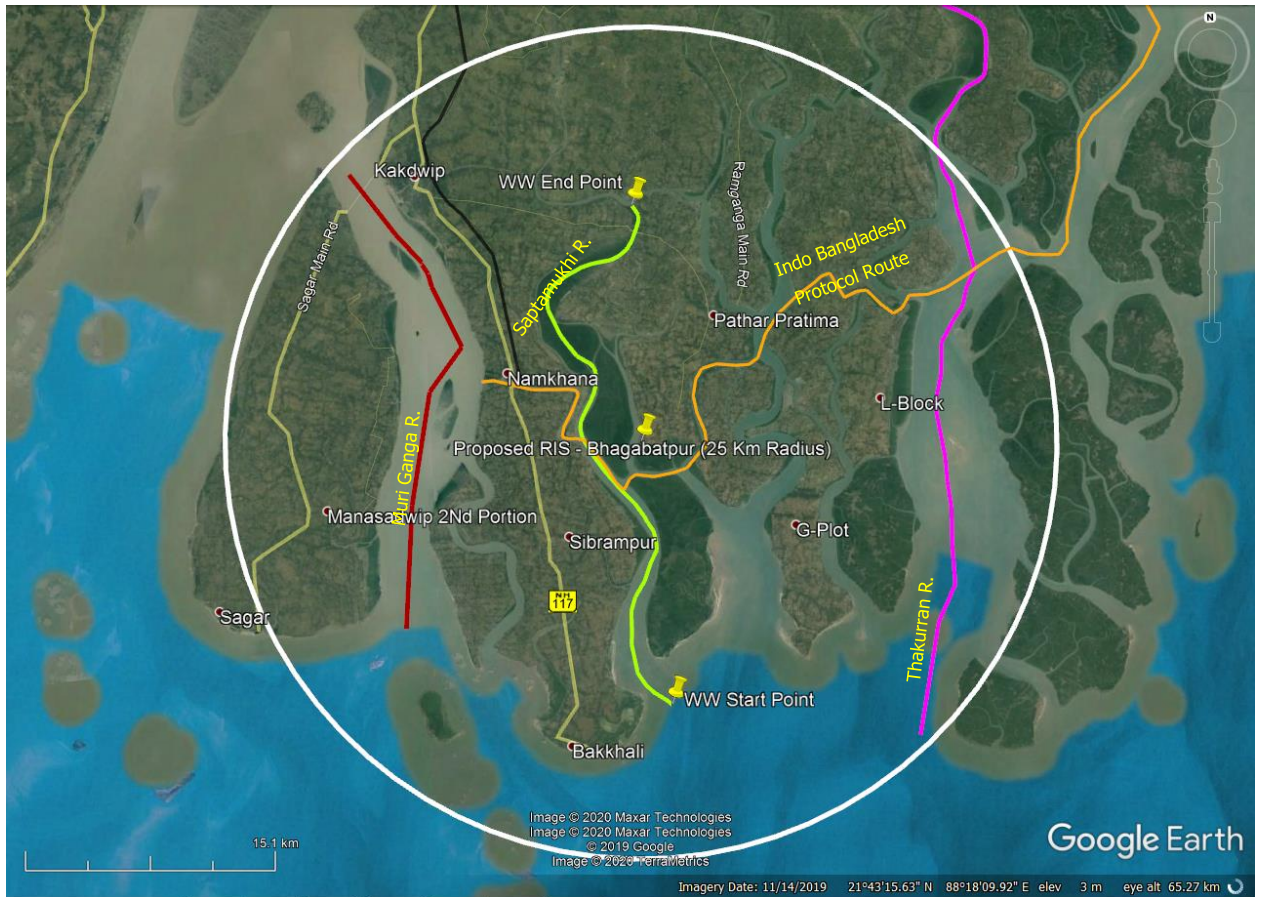

Figure 42: Google Earth image showing location map of proposed RIS and effective coverage

8.2 NIGHT NAVIGATION FACILITIES

On sectors of the river where there is day and night navigation, forks, junctions and the axis of the fairway, along with obstacles to navigation lying within the fairway, shall be marked by light buoys or bank marks and lights. Floating signs shall be installed at such a depth and at such a distance from the obstacle that the safety and ease of movement of vessels shall be guaranteed at night and in poor visibility. The marking shall be in operation continuously (by day and by night) all along the navigable section of the river.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The visibility of signs regulating navigation on the waterway shall be ensured at night by lighting them with fixed directional white lights, operating uninterruptedly and so positioned that the light does not incommode the boatmasters. If electric lighting cannot be used, the sign boards shall be covered with reflective material of a corresponding colour on which the symbol shall be clearly visible to vessels. At night, for proposed waterway terminals, it shall be sufficient to illuminate the day markings described above. If lights are considered necessary, the entrance shall be marked:

- To port of a vessel entering: by a red light, preferably rhythmic;
- To starboard of a vessel entering: by a green light, preferably rhythmic.

In the case of a narrow or specially shaped entrance, one of these lights may be sufficient to help a boatmaster to enter the harbour. Such a single light shall be rhythmic.

On the vessels there is a pattern in which these lights are set in conjunction with the International Association of Lighthouse Authorities (IALA) Buoyage Systems. The pattern is explained below:

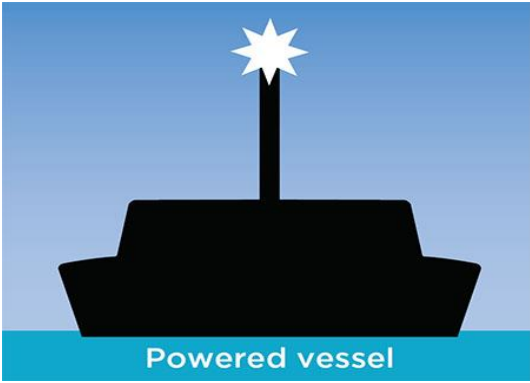

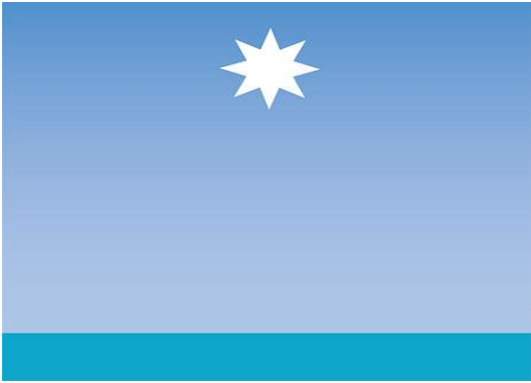

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- There is a light at the right-hand side of the boat (right side when facing the bow of the vessel known as the starboard side) which is green in colour.
- There is a light at the left-hand side of the boat (left side when facing the bow of the vessel is known as the port side) which is red in colour.
- Both the sidelights show an unbroken light over an arc of the horizon of 112.5 degrees such that from right ahead it can be viewed to 22.5 degrees shaft on either side.
- A white light is also placed at the back of the boat (known as the stern side). This shows an unbroken light over an arc of horizon of 135 degrees and fixed to show the light 67.5 degrees from right aft on each side
- The mast of the boat also has to have night lights. The colour of this light is white. Two mastheads lights are in place, with the second one shaft of and higher than the first, when the length of the vessel is greater than 50 metres. Shows an unbroken light over an arc of the horizon of 225 degrees and so fixed to show the light from right ahead to 22.5 degrees abaft on either side.

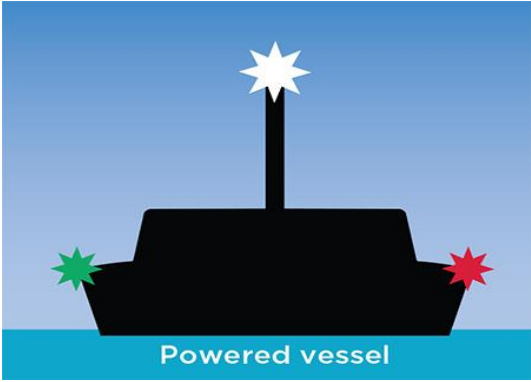

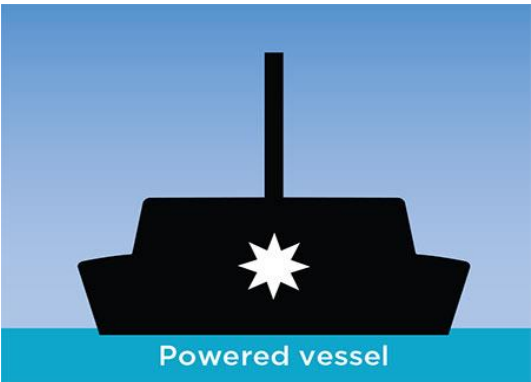

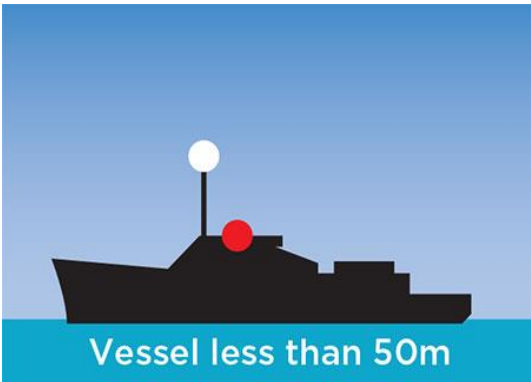

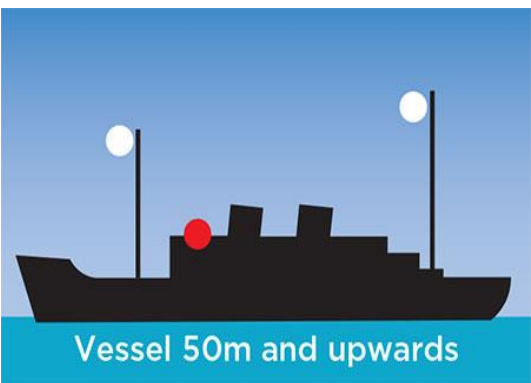

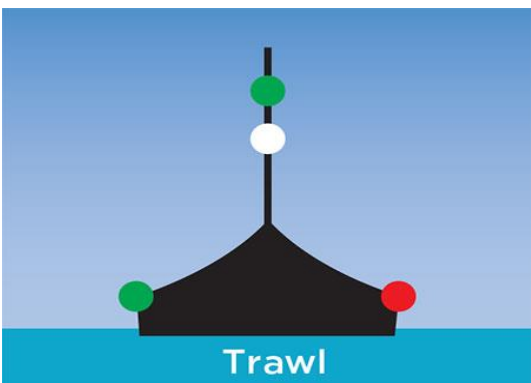

To stay safe on the water at night or at times of restricted visibility, the vessel operator also need to be able to recognise lights on other vessels. These lights help prevent collisions. A vessel's navigation lights tell the master/serang:

- whether it's at anchor or underway
- the direction it's travelling
- the vessel type and size.

Some examples of navigation lights used during night navigation are as below:

| | |
|---|---|
|  <p>Powered vessel</p> |  |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

8.3 EXISTING SYSTEM

Presently, passenger ferry services are operational along the river. The ferry services are operated by locals and no safety, aids to navigation and communication system exists currently along the waterway.

8.4 ADDITIONAL REQUIREMENT

State-of-art navigation and communication system is required in the proposed waterway. The details of River information systems and its applicability and relations to different services in navigation are provided in **Figure 43** as below.

| SYSTEM | SERVICE | | | | | | | | | | | | | |
|-------------------------------------|---------------------|---------------------|-----------|-------------------------|----------------------|----------------------------|----------------------------|-------------------------------------|----------------------|--|----------------------------|---------------------------------|------------|-----------------------------------|
| | Fairway information | Traffic information | | Traffic management | | | | Information for transport logistics | | | | Information for law enforcement | Statistics | Waterway charges and harbour dues |
| | | Tactical | Strategic | Vessel traffic services | Navigational support | Lock and bridge management | Calamity abatement support | Voyage planning | Transport management | Inter-modal port and terminal management | Fleet and cargo management | | | |
| Visual aids to navigation | x | | | | | | | | | | | | | |
| Radar reflecting aids to navigation | x | | | x | | | | | | | | | | |
| Light signals | x | | | x | | x | | | | | | | | |
| Mobile phone (voice and data) | x | | | | x | x | x | x | x | x | x | x | | x |
| GNSS for vessel positioning | | x | x | | | | x | x | x | x | | | | |
| VHF radio | x | x | x | x | x | x | x | x | | x | | x | | |
| Internet | x | | | | x | | x | x | x | x | | | | x |
| Vessel based radar | x | x | | | | | x | | | | | | | |
| Shore based radar | | x | | x | | x | x | | | | | | | |
| Shore based CCTV cameras | | x | | x | | x | | | | | | | | |
| Electronic navigational chart | x | x | | x | | x | x | x | | | | | | |
| Vessel tracking and tracing system | | x | x | x | | x | x | x | x | x | x | x | | x |
| Ship reporting system | | | x | | | | x | x | x | x | x | x | x | x |

Figure 43: Relation between Services and RI Systems

8.5 COSTING

The following criteria have been adopted for estimating the quantity and cost of navigational aids, proposed for waterway.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- i) Quantity of the equipment/s has been decided depending on the distance of the river to be covered.
- ii) To operate the system, proper certified operators are to be deployed at site along with the security guards.
- iii) CAMC for minimum three years has been considered after one year warranty from the date of commissioning.
- iv) As Saptamukhi waterway is constituent of NW-97 comprising 13 rivers, required quantity of DGPS and RIS condering their effective coverage to avoid duplicity of Instrument proposed and cost over runs is considered.

Capital cost of purchase & installation and O&M cost of DGPS is considered in submitted Matla DPR. Capital cost of purchase & installation and O&M cost of one RIS proposed at Bhagabatpur is considered in submitted Saptamukhi waterway. Accordingly, the capital cost of RIS and Marine lanterns/bouys provided in Saptamukhi Waterway works out as below.

8.5.1 Capital Cost

Table 30: Capital Cost for Aids to Navigation and Communication

| Sr. No. | Equipment | Qty | Unit Price (INR) | Total (INR Lakh) |
|----------|--|-----|------------------|------------------|
| A | RIS System | | | |
| 1 | AIS Base Station | 1 | 30,00,000.00 | 30.00 |
| 2 | RADAR | 1 | 100,00,000.00 | 100.00 |
| 3 | Meteo Sensor | 1 | 7,00,000.00 | 7.00 |
| 4 | ATG | 1 | 9,00,000.00 | 9.00 |
| 5 | VHF | 1 | 5,00,000.00 | 5.00 |
| 6 | DG Set 10 KVA | 1 | 7,00,000.00 | 7.00 |
| 7 | UPS | 1 | 5,00,000.00 | 5.00 |
| 8 | RIS Software | 1 | 35,00,000.00 | 35.00 |
| 9 | Installation Testing & Commissioning | 1 | 20,00,000.00 | 20.00 |
| 10 | Porta cabin | 2 | 12,00,000.00 | 24.00 |
| 11 | Trestle Tower | 1 | 10,00,000.00 | 10.00 |
| | Total cost of one RIS system | | | 252.00 |
| 12 | Construction Supervision, Design and Engineering charges | | 6% | 15.12 |
| | Capital cost per RIS system | | | 267.12 |

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

| Sr. No. | Equipment | Qty | Unit Price (INR) | Total (INR Lakh) |
|-----------------------------|--|-----|------------------|------------------|
| B | Marine Lantern/Buoys of 1.25 m dia | 2 | 2,00,000 | 4.00 |
| Capital Cost in Lakh | | | | 271.12 |
| 13 | Contingencies Charges | | 3% | 8.13 |
| D | Total Navigation & Communication Cost in Lakh | | | 279.25 |

8.5.2 O&M Cost

The operation and maintenance cost works out to as below:

Table 31: O&M Cost for Aids to Navigation and Communication

| Sr. No. | Manpower | Qty | Unit Price (INR) | Total (INR Lakh) |
|---------|--|-----|------------------|------------------|
| 1 | Engineer 1 * Site 1 * Months 12 per year | 12 | 35,000.00 | 4.20 |
| | Operator 3 * Site 1 * Months 12 per year | 36 | 20,000.00 | 7.20 |
| | Security 3 * Site 1 * Months 12 per year | 36 | 15,000.00 | 5.40 |
| 2 | Second Year | | | 17.98 |
| 3 | Third Year | | | 19.23 |
| 4 | Fourth Year | | | 20.58 |
| | | | Total | 74.59 |
| | CAMC for 4 Years | | | |
| 1 | 1st Year | 1 | | 27.93 |
| 2 | 2nd Year | 1 | | 30.72 |
| 3 | 3rd Year | 1 | | 33.79 |
| | | | Total | 92.43 |
| | Overall O&M Cost in INR Lakh | | | 167.02 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

9.0 ENVIRONMENTAL AND SOCIAL ASPECTS

9.1 OBJECTIVE OF ENVIRONMENTAL AND SOCIAL STUDIES

Inland Waterway Authority of India (IWAI), Ministry of Shipping, Government of India intends to explore the potential of additional waterways across the country for year round commercial navigation, and recommending the possibility of Composite and Integrated development of National waterways to achieve navigation and to develop water transport facilities across India.

The section of Saptamukhi River from Km 0.000 to Km 37.163 falling in South 24 Parganas District of West Bengal State is also considered for Sunderban waterways and declared as National Waterway No. 97 (NW-97).

The Saptamukhi River is a tidal estuarine river in and around the Sunderbans in South 24 Pargana district in the state of West Bengal, India. The river flows between Kulpi and Mathurapur blocks and has a connection with the Muri Ganga River and Deogra Khal. It falls in to the Bay of Bengal with a wide mouth after traversing about 80 kilometres.

Saptamukhi River has one tributary/creek on its banks. The detail of the creek is given in **Table 32**.

Table 32: List of Creeks

| SI No | Creek | Chainage | Length(Km) |
|-------|---------------|----------|------------|
| 1 | Haripur Creek | 8.19 | 10.3 |

The major objective of this study is to establish present environmental condition along the project corridor through available data /information supported by field studies to evaluate the impacts on relevant environmental attributes due to the construction & operation of the proposed project; to recommend adequate mitigation measures to minimize / reduce adverse impacts and to prepare an Environmental Management Plan (EMP) for timely implementation of the mitigation measures to make the project environmentally sound and sustainable. The study basically includes:

- Establishment of the present environmental and social scenario
- Study of the specific activities related to the project
- Evaluation of the probable environmental and social impacts
- Recommendations of necessary environmental control measures.
- Preparation of Environmental Management Plan
- To identify the requirement of various regulatory clearances, NoCs

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

9.2 ENVIRONMENTAL SETTING IN THE PROJECT AREA

9.2.1 Physiographic

The entire study stretch is in South 24-Parganas district. South 24 Parganas district lies between 22°12'13"N and 22°46'55"N latitude and its longitudes are 87°58'45"E and 88°22'10"E covering an area of 9,960 sq. km. Alipore is the district headquarters of South 24 Parganas. It is the largest district of West Bengal in terms of area with a very small proportion of urban settlements. A large portion of the district is included in the Forests of Sundarbans.

Geographically, district South 24 Parganas lies in the lowest course of river Ganga at the Southern-most part of Gangetic West Bengal. The entire drainage pattern of the district is heavily incumbent upon the tidal forces of Bay of Bengal. There are numerous mudflats, coastal wetlands, lagoons, creeks and estuaries of large rivers in the district. The most important rivers of the district are Hooghly (the final course of Ganga), Bidyadhari, Matla, Piyali, Raymangal, Thakuran, Raidighi, Bidya, Saptamukhi (owing to its seven channels), Hataniya-Doaniya etc. There are many streams and rivulets known as Khal and forested Swamps and marshy wetlands known as Bil (also spelt as Beel). Most of the rivers are joined with each other through these channels, naturally or erected by human, and forms a web like river-network spread over the larger share of the district. Due to tidal activity in the Bay of Bengal, most of these rivers changes their paths often and forms small water bodies throughout the district. The sea water can enter as far as 100 km. from the coastal lines through these river streams. There are many other small rivers passing through the district, most of them are directly connected to the Bay of Bengal and are influenced by the Tidal waves.

The physiography of the entire district is situated in the Gangetic delta. A large every area in the southern part of the district is covered with the dense jungle of Sundarban with numerous rivers and its tributaries in between. Numerous islands are thus found in this area. Some of these islands remain totally sub-merged under water. In the northern part of the district we find the Baruipur-Jaynagar Plain and Kulpi-Diamond Harbour Plain which is 5-6 meters above the sea level. Here the process of land making process is still going on. The district could be divided into 4 sub-micro regions viz. (a) South Hugli Flats (b) South Bidyadhari Plain (c) Hooghly Delta, and (d) Sundarbans.

South Hugli Flats: From the northern boundary of the district (Kolkata) to Diamond Harbour in the south, this is a narrow flat alluvial land along the river of Hooghly which also forms the district boundary in the west. Flowing south-west, Hooghly receives the Rupnarayan River in the Hugli point and then turns east for about 12 km. until it reach Diamond Harbour. From there it again turns

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

southwards and falls into Bay of Bengal. The Hugli is a navigable river and ships reach Kolkata Port through this river during high tides.

South Bidyadhari Plain: This plain area has its general slope towards the south. Situated in the northern part of the district, river Matla is the most prominent river of this plain. There are many streams and water channels which are locally known as khals.

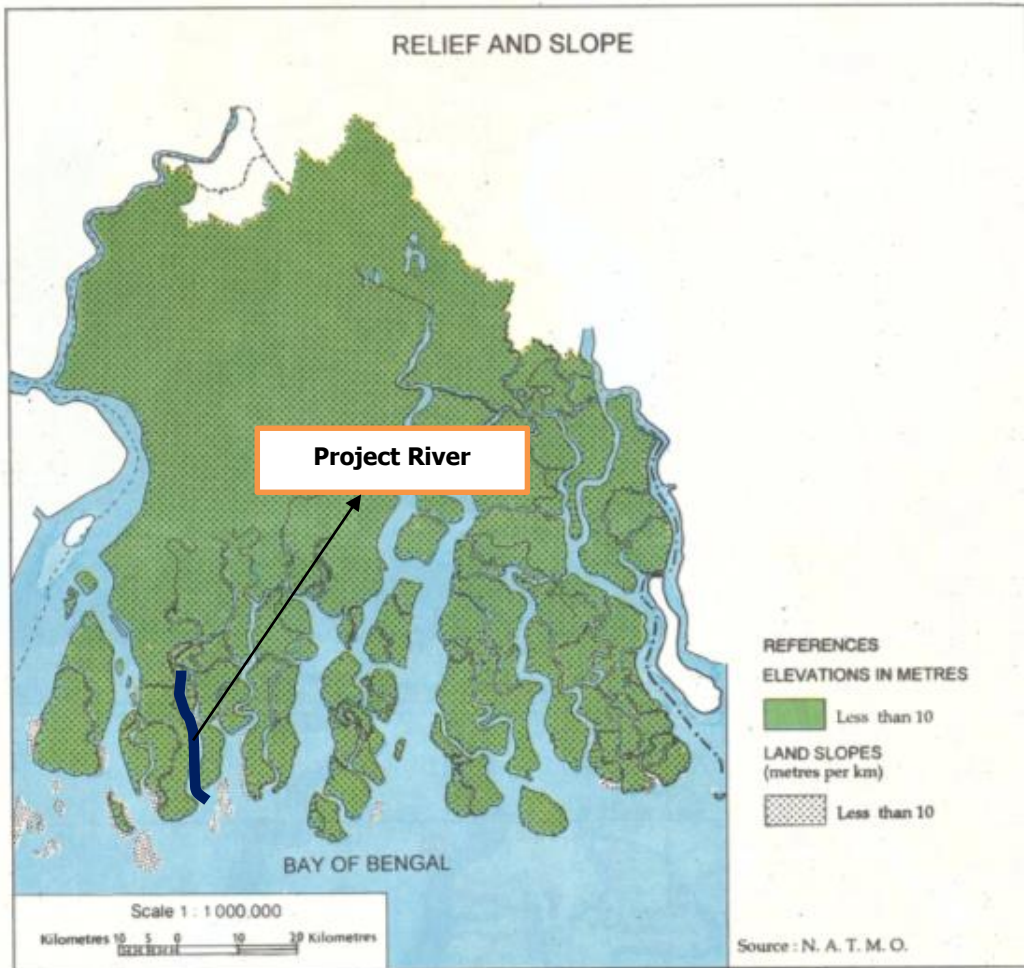

Hooghly Delta: Lying in the south-western part of the district, the Hooghly river forms the district boundary in the west. The river falls into the Bay of Bengal and has a southern slope. Before falling into Bay of Bengal, it bifurcates into two channels. The main channel is passing to the west and the other called Baratala to the east of Sagar Island. The southern part of the Hugli Delta has numerous channels and islands of which Henry's Island, Sagar Island, Frederick Island and Fraserganj Island are some of the worth mentioning islands. It is a land of strong tides and tides sometimes reaches a height of 3 to 5 metres.

Sundarbans: Almost the entire area under Indian part of Sundarban is contained in district South Twenty Four Parganas. A dense mangrove forest amongst numerous rivers and streams, thousands of islands, rich flora and fauna along with human presence has made Sundarbans world famous. The area is known for the Royal Bengal Tiger (*Panthera tigris*), as well as numerous fauna including species of birds, spotted deer, crocodiles and snakes. The fertile soil of Sundarbans helps intensive agriculture. Rightly designated as among the 'new seven wonders of nature', Sundarbans functions as a protective barrier for millions of inhabitants living in the southern part of the district.

Sundarbans is stretched between India and Bangladesh with India's share is only 19 percent. The Bay of Bengal lies in the southern part of Sundarbans and the rivers of the region falls there. Thus it has become a region of transition between the fresh water of the rivers and the saline water of the Bay of Bengal.

Relief and Slope Map of South 24 Parganas District are furnished in **Figure 44**.

(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Source : NATMO

Figure 44: Relief and Slope Map of South 24 Parganas District

9.2.2 Geology and Seismicity

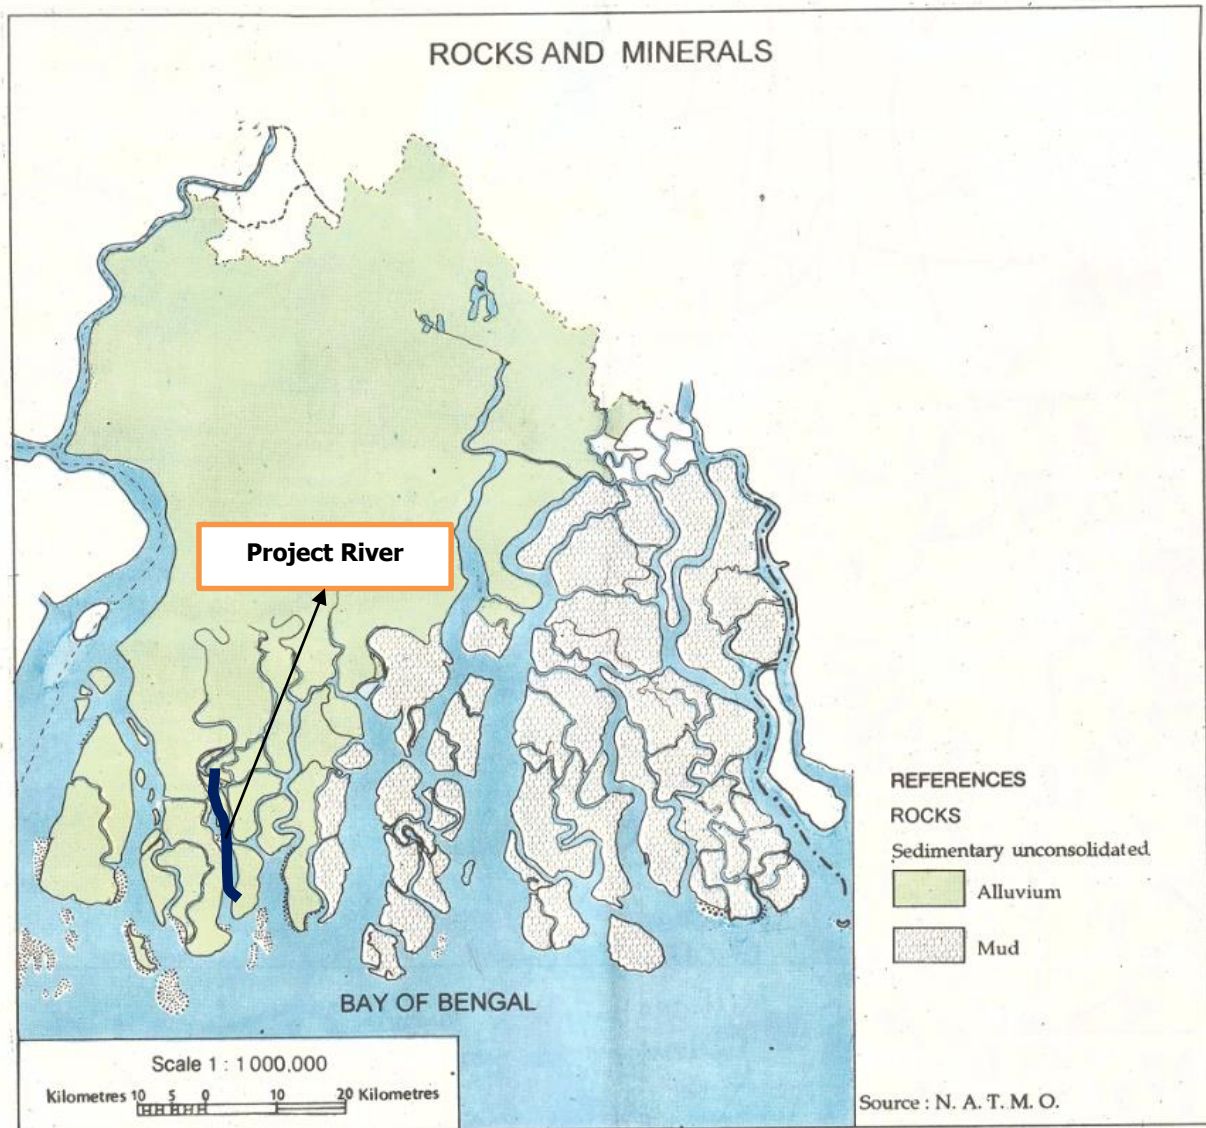

Geology:

The district of South 24-Parganas is covered with recent alluvium, which is of great depth. Once a boring was conducted near Akra Road, Garden Reach which found no signs of rocky bottom or marine beds even when dug at a depth of 1,306 feet. In the eastern and central parts, the surface soil is chiefly a clayey loam with some peaty patches in the marshy areas. Surface soil in the Sundarbans area is heavy clay impregnated with salt. The borings conducted in the region indicate that the alluvium of the area consists of alterations of clay, sand and silt. Kankar (very tiny pieces of stone) is

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

mixed with sands and clays. Even the stumps of sundri trees have been found at Sealdah in Kolkata at various levels down to a depth of thirty feet.

The Rock and Mineral Map of South 24 Parganas District is presented in **Figure 45**.

Source : NATMO

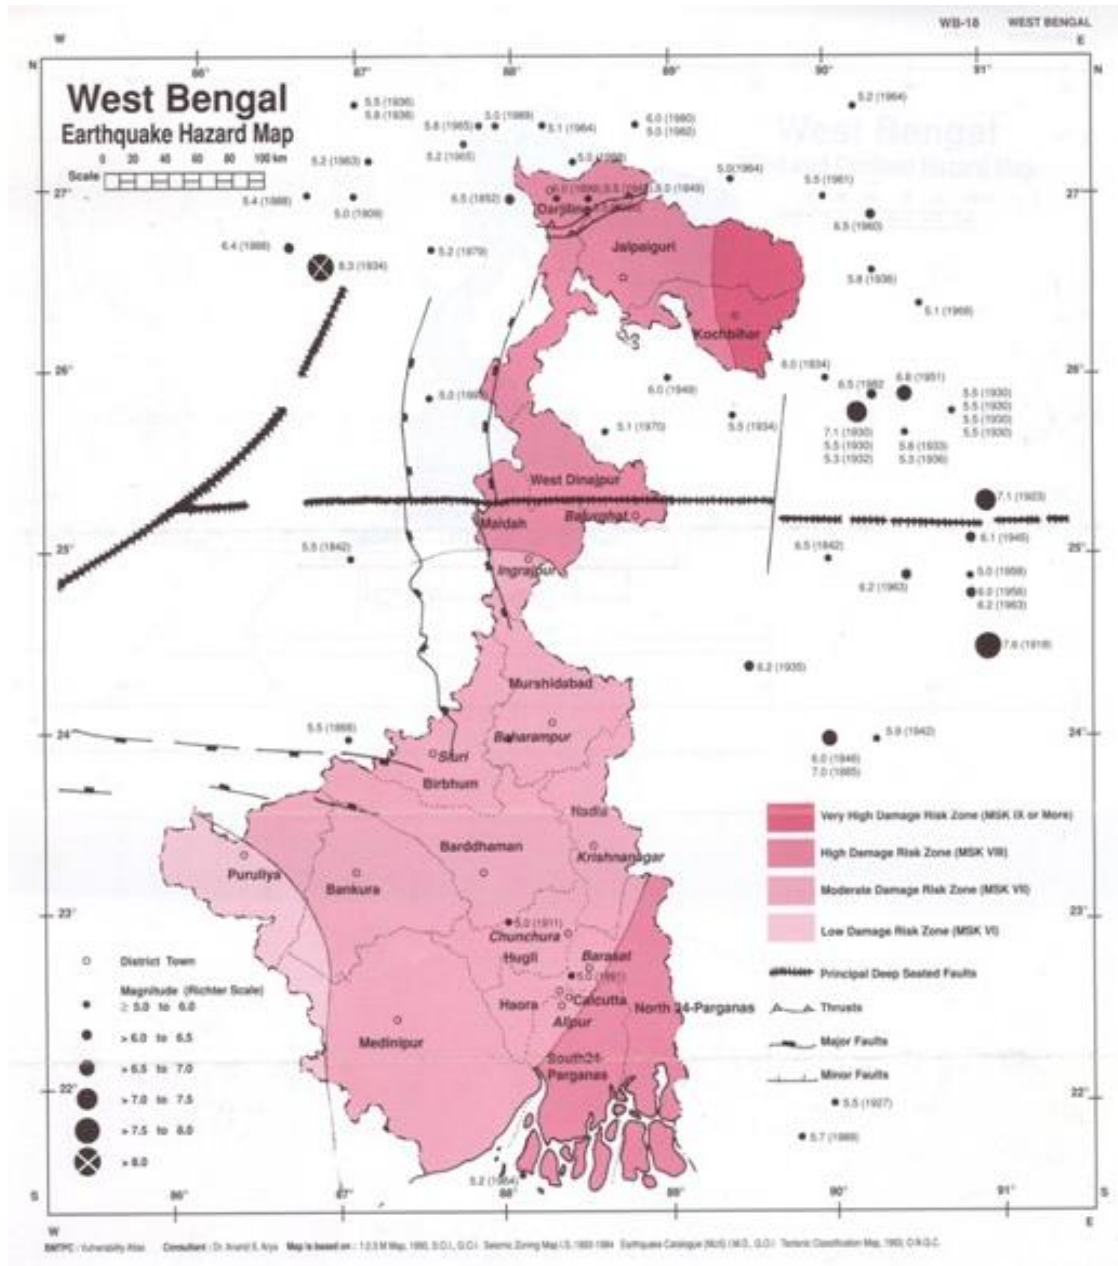

Figure 45: Rock and Mineral Map of South 24 Parganas District

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Seismicity:

As defined by the Indian Standard (IS) 2002 seismic zoning classification system, the seismicity is measured on a scale from II to V where zone II is most stable and Zone V is considered to be least stable. According to West Bengal Disaster Management Department (WBDMD) western sections of the northern districts of Jalpaiguri and Kooch Bihar lie in Zone V. The remaining parts of these two districts, along with the districts of Darjeeling, Uttar Dinajpur, Dakshin Dinajpur, Maldah, 24 North Parganas and 24 South Parganas lie in Zone IV. The rest of the state along with the city of Kolkata lies in Zone III. The project stretch lies in Earthquake high damage risk zone-IV. The Earthquake zoning map of West Bengal state is shown in **Figure 46**.

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

Source : West Bengal Disaster Management Department

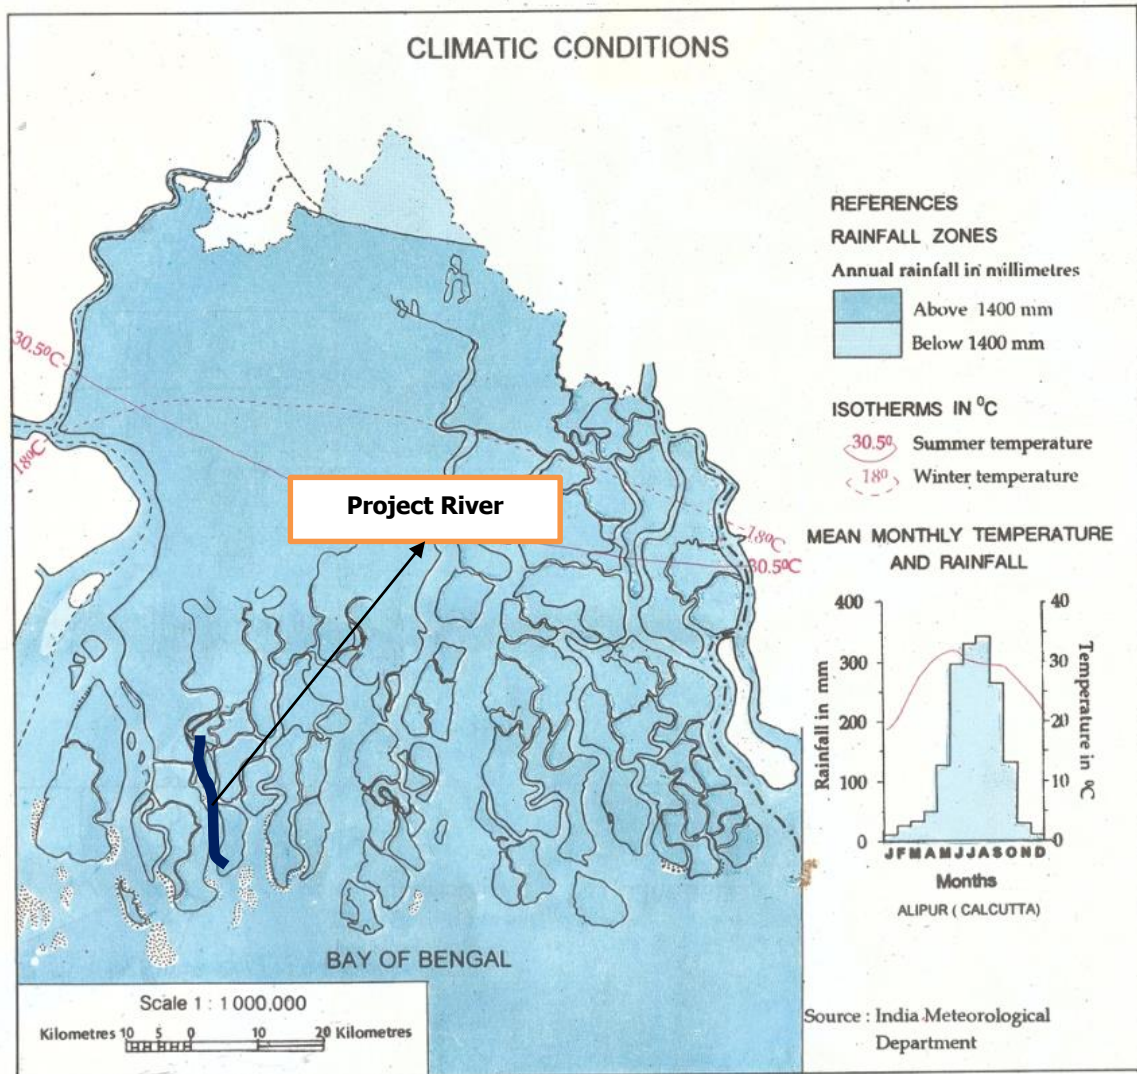

Figure 46: Earthquake Zoning map of West Bengal

9.2.3 Climate

The normal climate of the district is hot and humid throughout the year with well distributed rainfall during the monsoon season. The maximum temperature as recorded is 37°C and the minimum is 9°C.

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

It may be noted that the skies are moderately clouded in May, heavily clouded in monsoon season and clear or lightly clouded during rest of the year. Winds are generally stronger in Sundarbans and its surroundings. Nor'westers from March to May and the Bay cyclones during the monsoon ravage the land every year. The climatic condition of the district is shown in **Figure 47**.

Source : NATMO

Figure 47: Climatic condition of South 24 Parganas District

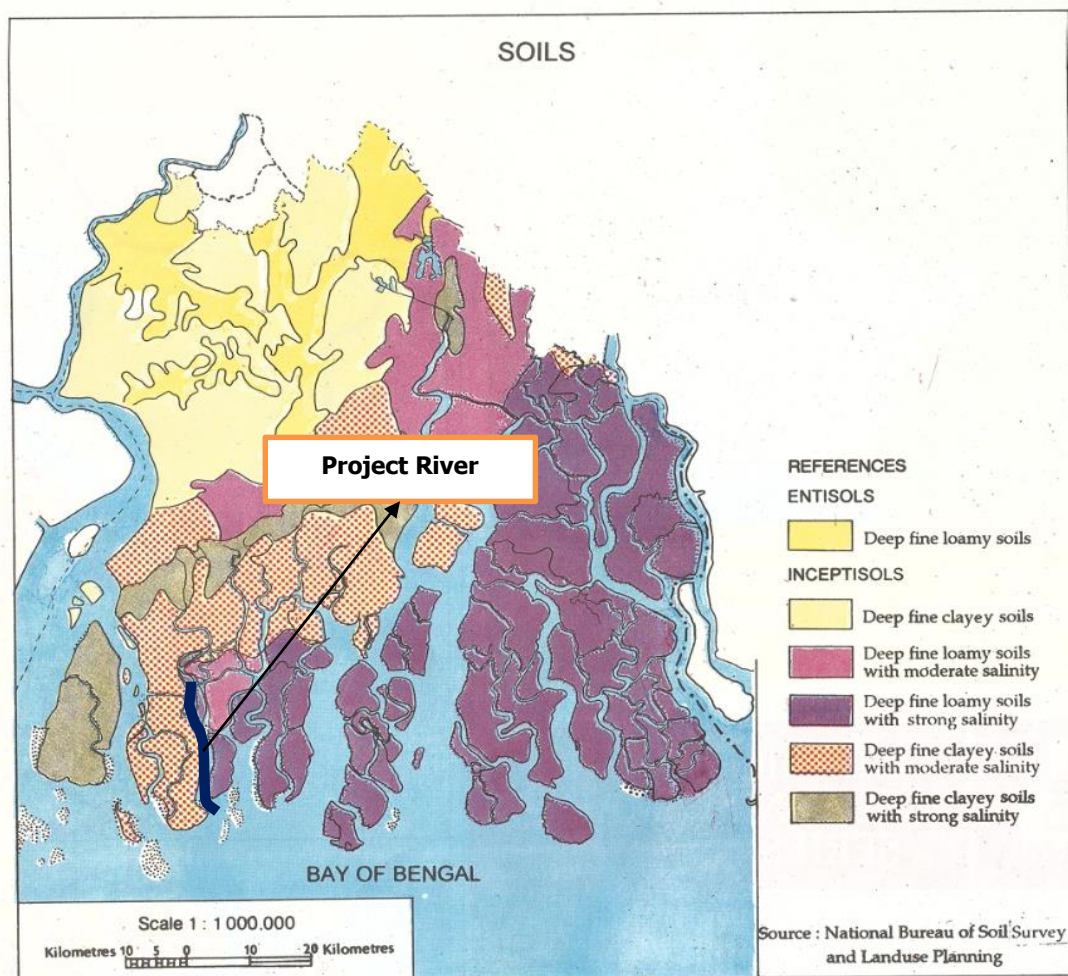

9.2.4 Soil

The presence of numerous rivers, khals and bils with Bay of Bengal covering almost the whole of the south has divided the soil of the district into two broad categories viz. non-saline soils and coastal soils

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

of tidal origin. The direct deposits of Ganga alluvium is salt free and rich in calcium or magnesium and thus rich in nutrients. The indirect deposits of Ganga alluvium is formed by the water going to sea, getting salty and re-entering the main land through tides.

Costal soils in the district of south 24 parganas are distributed over the police station of Gosaba, basanti, Canning, Bhangar, Mograhat, Diamond Harbour, Falta, Mandir Bazar, Joymagar, Kultali, Mathurapur, Kulpi , Patharpratima, Namkhana and Sagar. Considering the trends in the soil salinity fluctuations, ground water table condition, natural vegetation, cropping practices, watershed areas draining into costal water and other features relevant to costal agro ecosystem. The soil map of the district is given in **Figure 48**.

Source : NATMO

Figure 48: Soil Map of South 24 Parganas District

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

9.2.5 Land Use Pattern

The land use along the project waterway is predominantly agricultural land. There are a number of brick kilns also located along the waterway. There are a large number of small guest houses, ashrams, hotels etc. to cater for tourists.

Land use pattern of the project influenced district is presented in **Table 33**.

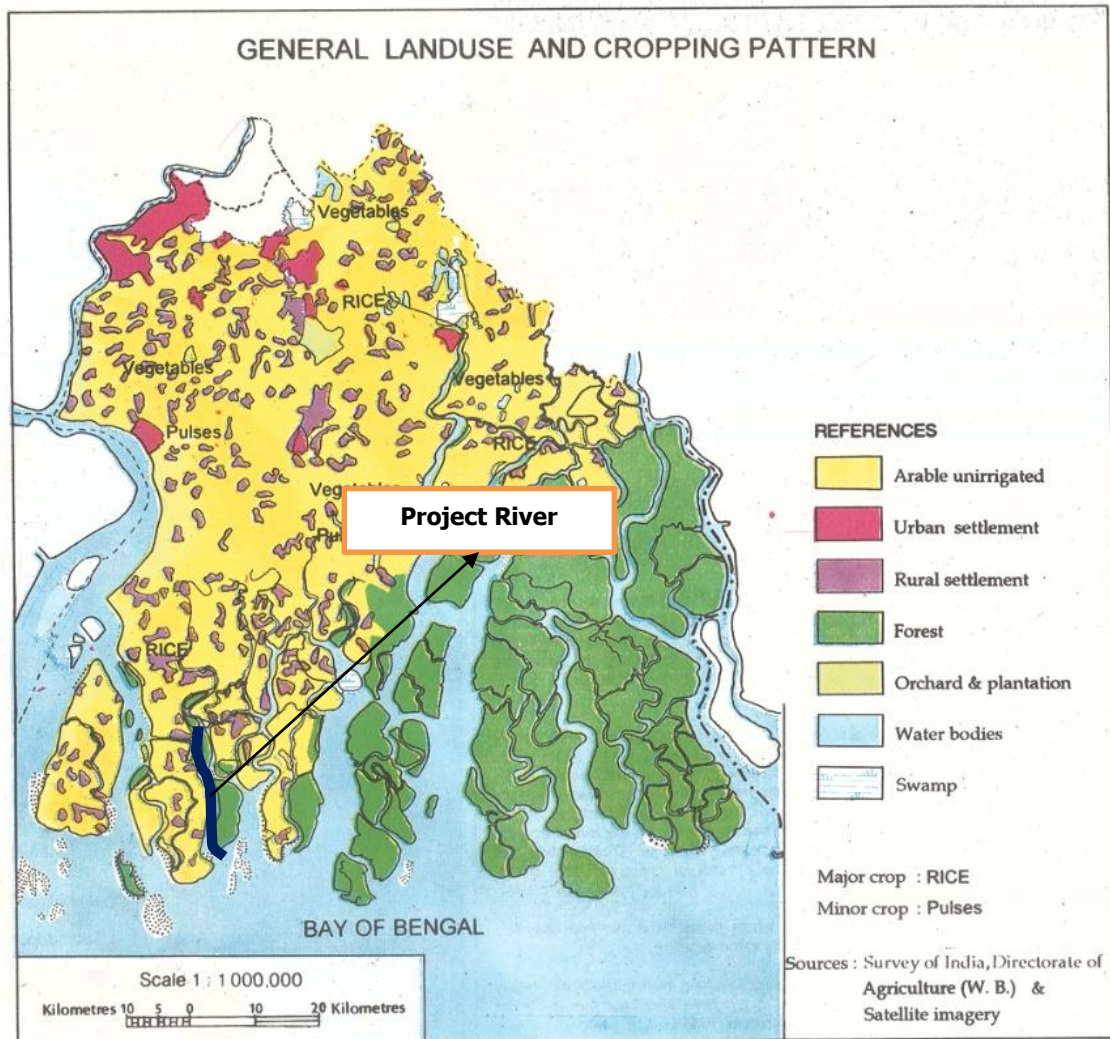

Table 33: Land Utilization Pattern of the South 24-Parganas district (Area in '000 ha.)

| Year | Reporting Area | Forest Area (C) | Area under Non-agricultural use | Barren & unculturable land | Permanent pastures & other grazing land | Land under misc. tree groves not included in Net area sown | Culturable waste land | Fallow land other than current fallow | Current fallow | Net area sown |

Source: - District Statistical Hand Book, South 24 Parganas, 2010-11

The district is situated in the Proper Delta of Lower Ganga Plain. It is little higher above the flood level and the physical features are similar to deltaic land of the country. The northern inland tract is fairly well raised delta and the southern portion is a low lying Sundarbans towards the seaboard. The Sundarbans are a network of tidal channels, river creeks and islands. There are some swampy marshes covered with low forest and scrub wood. The low land gradually declines towards the coast. The land use pattern of the district is given in **Figure 49**.

Figure 49 : Land Use Map of South 24 Parganas District

9.2.6 Ambient Air Quality

During the reconnaissance survey, it was found that the Air quality along the study area of Saptamukhi River was free from dust. However, it was also confirmed from the local people that there is no problem caused due to Air pollution. Also there is no major industrial development along the waterway stretch. The Ambient Air quality near Kakdwip Area is given in **Table 34**.

9.2.7 Ambient Noise Level

During the reconnaissance survey, it was found that noise is not a big issue in the surrounding areas of Saptamukhi River. There are no noise-generating sources in the nearby areas.

9.2.8 Susceptibility to Natural Hazards

West Bengal is vulnerable to multiple disasters. Due to its sub-tropical littoral location, the state is prone to tropical cyclones, storm surges and tsunamis. In the past, this district was hit by natural hazards on many occasions. The hazards include Cyclone, Storm Surge, Flood, Earthquake etc. of medium to large intensities. Susceptibility to various kinds of Natural Hazards is elaborated in the following sections-

- **Susceptibility to floods**

River and coastal flooding are the most frequently occurring natural disasters and are increasing in occurrence more rapidly than any other disaster. Urbanization and deforestation reduce the capability of the earth to hold excess water. As asphalt- and concrete-covered surfaces expand and open spaces disappear at the edges of metropolitan areas, it takes less rain to flood communities as water running over the pavement collects quickly and easily disrupts storm drain systems. Those areas which are most at risk for floods include low-lying areas, coastal regions and communities on rivers downstream from dams. Flood waters are extremely dangerous; a mere six inches of swiftly moving water can knock people off their feet.

- **Susceptibility to Earth Quake**

Earthquakes are one of the most powerful natural forces on earth and regularly affect people around the world. Earthquakes can have a range of magnitudes with the strongest having devastating consequences for the areas where they are centered, nearby areas, and even some far away in the case of earthquake-generated tsunamis.

Most earthquakes are quite small but are not readily felt. Larger and more violent earthquakes are those that occur in a release of energy as the plates slide past or collide into one another.

Large earthquakes can focus on the boundaries where two plates meet, but they are not limited to these areas. As the plates move, fractures in the earth's crust develop and earthquakes are often located on them. These fractures are referred to as faults, and all generate earthquakes when they move.

The impacts of earthquakes vary based on their energy and intensity. The strongest earthquakes that occur can result in ground rupture, causing damage to bridges, dams, roads, railroad tracks, and the foundations of buildings. They can also cause landslides and avalanches as a result of the shaking. Intense shaking can also cause liquefaction of ground built on landfill when water mains break. The shaking of an earthquake is increased in areas of landfill.

South 24 Parganas fall under Zone IV of the Seismic Zone of India. On 15th April 1964, largest instrumented Earthquake occurred in Sagar Island with Magnitude 5.2.

- **Susceptibility to Wind and Cyclones**

Cyclones are natural events, which cannot be prevented. Cyclones form in certain favourable atmospheric and oceanic conditions. There are marked seasonal variations in their places of origin, tracks and attainment of intensities. These behaviours help in predicting their movements. Pre and Post monsoon storms are more violent than the storms of the monsoon season. The coastal stretch of West Bengal, especially in South 24 Parganas is necessarily highly vulnerable to cyclone. The phenomenal storm surge in coastal West Bengal is due to its peculiar bathymetry and nature of coastal belt. As a result when a very severe cyclonic storm or a hurricane approaches the coast, the enormous storm surge generated by the wind pressure submerges the coastal belt at the time of the storm crossing the belt. The frequency of storms crossing this belt is also high. Another peculiar characteristic of this coast is that it is crisscrossed by innumerable rivers and rivulets, with the

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

elevation of the islands about 4 to 5 meters. The seadykes and embankment are not strong enough to resist strong wind-driven waves and naturally cave in during depression / cyclonic storm situation.

A heavy cyclone accompanied by a sea wave, is the worst kind of disaster which may occur in this delta. Disasters of this kind have caused appalling mortality in the past and will possibly do so again. Practically, nothing can be done to avoid them but fortunately they are not frequent. They are most likely to occur at the beginning or at the end of rains, i.e., either before the winter paddy is planted or at a time when it is almost ripe. Under such circumstances the damage to crops may be small in comparison with the mortality among men and cattle which may be enormous. The maritime districts of West Bengal are liable to storm waves but South 24 Parganas has suffered most severely.

The district experiences two Cyclone seasons – pre-monsoon and post-monsoon cyclone during April-May and Nov-Dec, respectively. Pre-monsoon cyclone, which causes wide spread hailstorm and it is traditionally called as Kalbaishaki. The district is located in very high damage risk zone ($V=50\text{m/s}$) with respect to Cyclone. The historical Records of devastating cyclone are given in **Table 35**.

Table 35: Historical records of most devastating cyclones in South 24-Pargana district

| S. No. | Date | Cyclone | Description |
|--------|---------------------------|----------------------------|---|
| 1. | 7-12 October, 1737 | Super Cyclone* | Crossed West Bengal coast over Sunderbans Surge height: 12 m Loss of life: 300,000 |
| 2. | 2-5 October, 1864 | Very Severe Cyclonic Storm | Cross the coast near Contai, West Bengal Surge Height: The wave in many places rose to 9 m The Maximum height of the waves reached 12 m. At Sagar Island it was 5 m above land level. At Diamond Harbour, the wave was 3 m Loss and Damage: People Killed= 50,000 (mostly due to drowning), and 30,000 (due to diseases as a result of inundation) |
| 3. | 23-26 May, 2009 | Severe Cyclonic Storm | Crossed close to the east of Sagar Island Surge Height: 3-5 m Loss and Damage: People Killed=137, Cattle heads Killed= 50,000 |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

9.2.9 Estuary and Coastal Zone

The District is interspersed with innumerable drainage channels including some important rivers, creeks, cross - channels and several man-made drainage-cum-irrigation canals. More particularly in the south and south-eastern parts of the District, this drainage network has attained a complex pattern due to the presence of numerous crosschannels which ultimately join the major tidal creeks. They have given rise to a large number of islands of various shapes and sizes. These deltaic and tidal streams have their off-take points further upstream either in the Ganga or in the Padma River. To the west of the District, the Bhagirathi - Hooghly is the most important stream of this system. The lower tidal portion of this stream is called as the Hooghly, while the upper non-tidal portion is known as the Bhagirathi.

Coastal ecosystem" includes estuaries and coastal waters and lands located at the lower end of drainage basins, where streams and river systems meet the sea and are mixed by tides. The coastal ecosystem includes saline, brackish (mixed saline and fresh) and fresh waters, as well as coastlines and the adjacent lands. All these water and landforms interact as integrated ecological units. Shorelands, dunes, sandbars, offshore islands, headlands, and freshwater wetlands within estuarine drainages are included in the definition since these interrelated features are crucial to coastal fish and wildlife and their habitats. Mangroves are located all along estuarine areas, deltas, tidal creeks, mud flats, salt marshes and extend over 4871 sq. km (about 7% of world's mangrove areas). Impact of global warming- induced sea level rise due to thermal expansion is more pronounced in the Bay of Bengal due to the shallowness of the waters. The entire coastal ecosystem in general and the eastern coast in particular are highly vulnerable due to flat and low terrain, high population density, over exploitation of natural resources, high rate of environmental degradation on account of pollution and non-sustainable development. On many occasions, the livelihood requirements of people are detrimental to maintaining the delicate balance of the fragile coastal ecosystem. Degradation of the eco-system not only affects the environment adversely, but also makes the people living in the coastal areas more vulnerable.

In general, these rivers show a north-south trend, but some of them maintain south-easterly course as well. Besides variations in local slopes, existence of pockets of depressions or raised grounds also influences the alignments of local drainage system. These channels ultimately find their ways to the Bay of Bengal through any one of the principal estuaries, starting from the Hooghly estuary forming the western-most boundary of the District to the Raimangal in the east. Other principal estuaries are the Baratala (a distributary of the Hooghly), the Saptamukhi, the Thakuran, the Matla and the Gosaba. Amongst these, the Hooghly in the extreme west and the Ichamati - Kalindi- Raimangal

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

system receive some fresh water supply from their upstream zones. The supply of fresh water increases during monsoon rain. All other estuaries are beheaded and have become entirely tidal. These estuaries were the lower courses of the Ganga off-shoots in different phases of recent past. Though the upper courses of these rivers are totally disconnected from fresh water supply due to heavy siltation in their feeder channels, their lower courses still remain active owing to regular tidal flow. All these estuaries are inter-connected by intricate network of cross-channels which are generally developed at right angles to the main estuaries.

The estuaries in the western part of the District with the exception of the Hooghly are smaller in length compared to those in the eastern part. The Muriganga or Baratala estuary along Namkhana - Kakdwip area is only 15 Kms. long while the Raimangal stretches via the Kalindi and the Ichamati for about 60 Kms. near Hasnabad - Hingalganj area. The inland extensions of active cross channels are rather constricted in the western part than in the east.

The drainage regime can be divided distinctly into two parts taking the Matla River as the axis. The Matla is a very wide estuary comparable with the Hooghly near the sea face. It becomes very turbulent during the monsoon months. But the upper course of the Matla from Canning to Basanti is seriously affected by excessive silt deposition. The Bidyadhari, the Karati and the Atrabeki have drained into the Matla at Canning. This section has been completely silted up. The Atrabeki, which was once a connecting channel between Matla and the north-western channel of Raimangal has now ceased to be active. The upper courses of Harinbhanga – Jhilla - Raimangal have become hydrologically more efficient due to increased tidal activities. Even in the Haroagang, flow tides are progressing via Jhilla-Raimangal creek. The tract lying in between Saptamukhi and Harinbhanga, to the south of the embanked area is truly in active phase where continuous deposition is in progress.

The section of waterway starts near Kakdwip at Lat 22°39'6.71"N, Long 88°55'33.35"E and ends at Kalanchi at Lat 22°53'53.79"N, Long 88°53'53.94"E. The start point is nearest to Dampier-Hodges Line and located at a distance of 4.5 km north from the Dampier-Hodges Line. It is an imaginary line, passing through 24 Parganas South and North districts, which roughly indicates the northern-most limits of estuarine zone affected by tidal fluctuations. However, tidal influence is observed in the stretch of waterway.

9.2.10 Archaeological and Heritage Locations

Jatar deul temple is an archaeological site located in the stony alluvial and bushy landscape of the western Sundarbans, which is about 25 km from Project river.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Sunderbans Biosphere Reserve, a World Heritage Site and International Biosphere Reserve declared by UNESCO is located in the district.

9.2.11 Flora

It is easily understood that from the above discussion that this area is rich in flora. Practically the whole district is covered with mature and active parts of Gangetic Delta. The southern plains surround the mature delta, the Sundarbans surrounds the active parts of Gangetic Delta. In the mature delta, cultivated crops have replaced the natural cover. Various kinds of vegetables, cereals, pulses, fibre plants, oil seed crops and other food accessories are found in the region. Rice is the most important cereal of the district. Exotic varieties of fruit trees, bamboo groves, flowers and scrubs are also found.

In a comprehensive study performed by David Prain in 1903 it is seen that Sundarbans have a total of 245 genera and 334 plant species. The Sundarbans flora is characterised by the abundance of Sundari (*Heritiera fomes*), gewa (*Excoecaria agallocha*), goran (*Ceriops decandra*) and keora (*Sonneratia apetala*) all of which occur prominently throughout the area. There is abundance of dhundul or passur (*Xylocarpus granatum*) and kankra (*Bruguiera gymnorhiza*) though distribution is discontinuous. Among palms (*Poresia coaractata*, *Myriostachya wightiana*) and golpata (*Nypa fruticans*), and among grasses spear grass (*Imperata cylindrica*) and khagra (*Phragmites karka*) are well distributed.

9.2.12 Fauna

The Sundarbans provides a unique ecosystem and a rich wildlife habitat. According to the latest Tiger Census, the Sundarbans have about 270 tigers (*Panthera tigris tigris*). But the encouraging fact is that the number of this endangered species is increasing. The Royal Bengal Tiger of Sundarban is one of the most majestic animals of the world.

Apart from tiger, there is much more wildlife. Most importantly, mangroves are a transition from the marine to freshwater and terrestrial systems and provide critical habitat for numerous species of small fish, crabs, shrimps and other crustaceans that adapt to feed and shelter, and reproduce among the tangled mass of roots, known as *pneumatophores*, which grow upward from the anaerobic mud to get the supply of oxygen. Animals like leopard (*Panthera pardus fusca*) and several other smaller predators such as the jungle cats (*Felis chaus*), fishing cats (*Prionailurus viverrinus*) and leopard cats (*Prionailurus bengalensis*) are also found in this jungle. Also chital deer (*axis axis*), Indian muntjacs (*Muntiacus muntjak*), wild boars (*Sus scrofa*), rhesus macaque (*Macaca mulatta*) and about 30,000 spotted deer are found in the area. Sundarbans supports diverse biological resources which include at

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

least 150 species of commercially important fish, 270 species of birds, 42 species of mammals, 35 reptiles and 8 amphibian species. This region is an important wintering area for migrant water birds also and is an area suitable for watching and studying avifauna. Some of the reptiles are predators too, including two species of crocodiles, the saltwater crocodile (*Crocodylus porosus*) and mugger crocodile (*Crocodylus palustris*), as well as the gharial (*Gavialis gangeticus*) and the water monitor lizards (*Varanus salvator*), all of which hunt on both land and water. Sharks and the Gangetic dolphins (*Platanista gangetica*) roam the waterways.

Avifauna: Sundarbans is the home of 170 species of bird life including the endemic brown-winged kingfishers (*Pelargopsis amauroptera*) and the globally threatened lesser adjutants (*Leptoptilos javanicus*) and masked finfoots (*Heliopais personata*) and birds of prey such as the ospreys (*Pandion haliaetus*), white-bellied sea eagles (*Haliaeetus leucogaster*) and grey-headed fish eagles (*Ichthyophaga ichthyaetus*). Other noteworthy birds found in this area are open billed storks (*Anastomus oscitans*), black-headed ibis (*Threskiornis melanocephalus*), water hens (*Amaurornis sp*), coots (*Fulica sp*), pheasant-tailed jacanas (*Hydrophasianus sp*), pariah kites (*Milvus migrans*), brahminy kites (*Haliastur indus*), marsh harriers (*Circus aeruginosus*), swamp partridges (*Francolinus gularis*), red jungle fowls, spotted doves (*Spilopelia chinensis*), common mynahs (*Acridotheres tristis*), jungle babblers (*Turdoides sp*), herring gulls (*Larus sp*), caspian terns (*Hydroprogne caspia*), gray herons (*Ardea cinerea*), brahminy ducks (*Tadorna ferruginea*), spot-billed pelicans (*Pelecanus philippensis*), great egrets (*Ardea alba*), night herons (*Nycticorax nycticorax*), common snipes (*Gallinago gallinago*), wood sandpipers (*Tringa glareola*), green pigeons (*Treron phoenicoptera*), rose-ringed parakeets (*Psittacula krameri*), paradise flycatchers (*Terpsiphone paradisi*), cormorants (*Phalacrocorax sp*), white-bellied sea eagles (*Haliaeetus leucogaster*), common kingfishers (*Alcedo atthis*), peregrine falcons (*Falco peregrinus*), various woodpeckers, whimbrels (*Numenius phaeopus*), black-tailed godwits (*Limosa limosa*), little stints (*Calidris minuta*), curlews (*Numenius sp*), golden plovers (*Pluvialis fulva*), pintails (*Anas acuta*), white-eyed pochards (*Aythya nyroca*), lesser whistling ducks (*Dendrocygna javanica*) etc.

Aqua fauna: Regarding the aqua fauna of the region silver carp (*Hypophthalmichthys molitrix*), barbs, river eels, starfish, king crab, fiddler crab (*Uca sp*), hermit crab, prawn, shrimps, Gangetic dolphins (*Platanista gangetica*), skipping frogs (*Euphlyctis sp*), common toads and tree frogs are found in abundance. One particularly interesting fish is the mudskipper.

Reptiles: An excellent number of reptiles are also found in Sundarbans. Some of the common ones are olive ridley turtles (*Lepidochelys olivacea*), sea snakes, dog faced water snakes (*Cerberus rynchops*), green turtles (*Chelonia mydas*), estuarine crocodiles (*Crocodylus porosus*), chameleons,

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

king cobras (*Naja naja*), salvator lizards (*Varanus salvator*), hard shelled batgun terrapins (*Melanochelys trijuga*), Russels vipers (*Daboia russelii*), monitor lizards (*Varanus bengalensis*), hawks bill turtles (*Eretmochelys imbricata*), pythons (*Python molurus*), common kraits (*Bungarus caeruleus*), green vine snake (*Ahaetulla nasuta*), checkered keelbacks (*Xenochrophis sp*) and rat snakes. The river terrapin (*Batagur baska*), Indian flap-shelled turtles (*Lissemys punctata*), peacock soft-shelled turtles (*Trionyx hurum*), yellow monitors (*Varanus flavescens*), water monitors (*Varanus salvator*) and Indian pythons (*Python molurus*) are some of the resident species.

The details lists of flora and fauna are given in **Annexure 3**.

9.2.13 National Parks, Forests, Wildlife Sanctuaries and Reserves

According to India State Forest Report, 2015 the total forest cover of South 24 parganas district is 2782 Km² which is about 27.93 % of the district's total geographical area (9960 Km²).

Out of 2782 Km², 977 Km² falls under very dense forest area category; whereas Moderately Dense Forest and Open Forest area covers 753 Km² and 1052 Km² areas respectively. The comparative statement showing forest cover of South 24 Parganas District and West Bengal state is presented in below **Table 36**. It is observed from the table that district's Forest Cover percentage in respect to total geographical area is higher than state's overall coverage.

Table 36: Forest Cover of South 24 Parganas District and West Bengal State

| District / State | Forest Cover in Sq. Km | | | | | Percentage of GA |
|--------------------|------------------------|-------------------|-------------------------|-------------|--------------|------------------|
| | Geographical Area (GA) | Very Dense Forest | Moderately Dense Forest | Open Forest | Total | |
| South 24 Parganas | 9960 | 977 | 753 | 1052 | 2782 | 27.93 |
| West Bengal | 88752 | 2948 | 4172 | 9708 | 16828 | 18.96 |

Source : India State Forest Report, 2015

There are forest patches available along the proposed waterway stretch.

National Parks, Wildlife sanctuaries, Biosphere Reserve play a vital role in protecting the wildlife of a particular area and providing them their natural habitat.

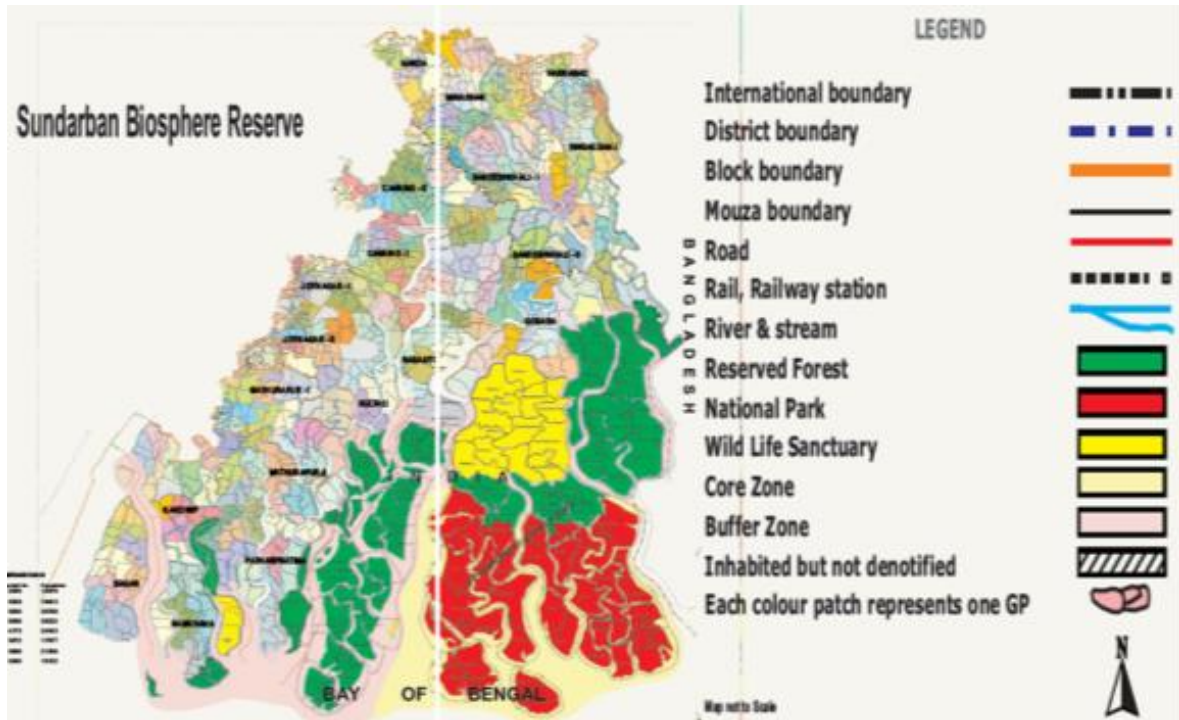

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The Sunderban Tiger Reserve is located in South 24 Paraganas, West Bengal and has a total geographical area of 2585 km² with 1437.4 km² consisting of populated areas and forest covering 1474 km². The Sundarbans National Park is a National Park, Tiger Reserve, and a Biosphere Reserve in West Bengal, India. It is part of the Sundarbans on the Ganges Delta, and adjacent to the Sundarban Reserve Forest in Bangladesh. The delta is densely covered by mangrove forests, and is one of the largest reserves for the Bengal tiger. It is also home to a variety of bird, reptile and invertebrate species, including the salt-water crocodile. The present Sundarban National Park was declared as the core area of Sundarban Tiger Reserve in 1973 and a wildlife sanctuary in 1977. On 4th May 1984 it was declared a National Park. It is a UNESCO world heritage site inscribed in 1987. It is considered as a World Network of Biosphere Reserve (Man and Biosphere Reserve) in 2001.

Seven main rivers and innumerable watercourses form a network of channels at this estuarine delta. All the rivers have a southward course towards the sea. The eco-geography of this area is totally dependent on the tidal effect of two flow tides and two ebb tides occurring within 24 hours with a tidal range of 3–5 m and up to 8 m in normal spring tide, inundating the whole of Sunderban in varying depths. The tidal action deposits silts back on the channels and raising the bed, it forms new islands and creeks contributing to uncertain geomorphology. There is a great natural depression called "Swatch of No Ground" in the Bay of Bengal between 21°00' to 21°22' latitude where, the depth of water changes suddenly from 20 m to 500 m. This mysterious depression pushes back the silts towards south and/or further east to form new islands.

The Map of Sunderban Biosphere Reserve is furnished in **Figure 51**.

Figure 51: Map of Sundarban Biosphere Reserve

Besides Sundarban, the other notified Protected Area (under Wildlife Act, 1972) in the district is also home to four wildlife sanctuaries. These are Haliday Island, Lothian Island, Narendrapur, and Sajnekhali. The details of various protected areas in West Bengal covered under purview of Wildlife Act, 1972 is given in **Figure 52**.

9.2.14 Socio-Economic Profile

Social Profile

The distribution of population in rural and urban area in the district as per 2011 census shows that majority of the population i.e. 74.42% lives in rural areas of the district. The total population of the district is 81,61,961 (Male- 41,73,778; Female – 39,88,183). The literary rate and sex ratio being 77.51% and 956 respectively, the percentage of SC and ST was 30.19 and 1.19 respectively in the district. The district comprises of 5 nos. of sub-divisions, 7 nos. of municipalities along with 111 Census Towns and 2,042 villages. The demographic profile of the project district is presented in **Table 37**.

Table 37: Demographic Profile of South 24 Parganas District

| Total Population | Male Population | Female Population | Literary Rate (%) | Sex Ratio | SC (%) | ST (%) |
|------------------|-----------------|-------------------|-------------------|-----------|--------|--------|
| 81,61,961 | 41,73,778 | 39,88,183 | 77.51 | 956 | 30.19 | 1.19 |

Major settlements/village located along the section of Saptamukhi River has been listed in the **Table 38** along with population details as per Census of India Data, 2011.

Table 38: Major settlements/village along the project stretch of Saptamukhi River

| S. No. | Village/ Town name | Population (nos.) |
|--------|--------------------|-------------------|
| 1 | Haripur | 4,992 |
| 2 | Sibrampur | 1,211 |

Source : Census of India, 2011

Economic Profile

South 24 Parganas

Agriculture: South 24 Parganas is mainly an agricultural district. The main source of livelihood of the people is cultivation, but most of the agricultural lands in the district are mono-cropped owing to poor irrigation facilities and high salinity in water. Besides, the district being coastal, the agriculture of the

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

district periodically suffers from setbacks like Storm, Cyclone, and Depression etc. The crops are also often subjected to attacks by various diseases, insects and pests owing to relatively high humidity (85.0 per cent). Rice is the most important food crop of the district. All the three well-known types of rice, Aus, Aman and Boro are cultivated in the district with Aman occupying the first place and outstripping the other two in both area of cultivation and production of grain.

Rice is the most important food crop in South 24 Parganas. Apart from rice, potato, pulses, gram, chilli etc. are also important food crops of the district. Jute is the most important cash crop. The topography of the Ganga riverine lands is plain with a mild slope towards the south and as such only rabi crops like potato, wheat and vegetables are irrigated from tanks and *bils*. The topography of the Ganga low lands is basin shaped and it gets submerged partially by accumulated rain water. Crops are usually irrigated from *bils* in Ganga low lands. The clayey soil of the Ganga low lands is very good for Aman paddy. With the first rain, Jute is sown. In July and August Jute is harvested and is allowed to lie on the plots to shed their stems for rotting. The topography of the saline soils is plain and its characteristic is the constant interaction between Ganga alluvium and saline soils. During rainy season the area of saline soils goes under Aman paddy. Except in the bheris and fisheries the entire area presents a landscape of Aman paddy. The nature of saline alkaline soil being silty it contains lower organic matter and nitrogen content and is not suitable for growing of crop as the salt concentration increases in such type of soils. Non-saline alkaline soil undergoes such a natural process that it becomes salt and calcium carbonate free and becomes favourable for growing of jute and rabi pulses. Degraded saline soil is highly unfit for growing of paddy and cultivation is often considered uneconomical on this soil and thus abandoned.

Irrigation: Although excessive rainfall in the district South 24 Parganas is certainly a boon for cultivation of the Aman paddy, it is harmful for other crops, because, with the exception of the high land along the banks of the rivers, the country is low and swampy and tends to become water-logged whenever there is excessive rainfall. Irrigation from rivers, dams and canals too does not help much as the water in winter is saline.

Despite such constraints, the Irrigation Department in last two decades has constructed some sluice gates and dams. They resist inflow of the saline water to certain extent, though cyclones and high tides often damage them. Excavation of tanks and sinking of shallow tube wells in some areas and use of transported water of the Hooghly river through back-feeding process has enabled the district to gain some more cropped areas.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Incidentally, irrigation by private canals is the most important source of irrigation covering almost 85 per cent of the total irrigated area in the district.

Animal Husbandry: South 24 Parganas doesn't occupy any significant place in animal husbandry. There is very little pasturage and cattle usually graze in the fields after the crops have been reaped, having very little to eat in the open. The local cattle are usually of non-descript type, ill-fed in most cases. There is also a crisis of the land for raising fodder crops and the villages try to overcome the crisis by cultivating seasonal fodders.

Fishery: South 24 Parganas is extremely rich in fish fauna, courtesy Sundarbans by virtue of presence of numerous intertwined river channels, creeks and riverine estuaries of Sundarbans, fishery has always been an important economic activity of the district of South 24 Parganas. Fresh water fishes as well as saline water fishes – both are available due to presence of rivers and sea. They are plentiful and found at all times of the year. While this is so, the supplies in the market are regrettably poor, still today there is no adequate arrangement for the preservation of fish. Thus the fishermen are compelled to sell their fishes in open market and naturally they do not receive adequate amount as they have to sell all the fishes afresh nor those will be wasted. Apart from rivers and seas, fishes are also available in ponds, lakes, *khals*, *bils* and *bheris*. Small fishermen use boats and to keep the fishes fresh and alive they keep their catches in bamboo cage in water tied to their boats. Big fishermen use motor boats and motor launches and use ice for preservation. The wholesale fish market is at Canning though there are a total eleven landing centres in South Twenty Four Parganas. They are Basanti, Kultali, Gosaba, Sandeshkhali, Namkhana, Kakdwip, Diamond Harbour, Kalinagar (P.S. Nadakhali), Raidighi and Port Canning.

Industry: Though the district shares common boundary with the State Capital of Kolkata, still the industrial sector is not much developed in South 24 Parganas district. The presence of dense jungle of Sundarbans, numerous islands and rivers, *khals* and *bils* had made a large part of the area non-accessible for development of industry. One serious reason may be lack of adequate electricity.

The industries found in the district are mainly of house hold industry type. The centres for manufacturing of cutlery and agricultural implements are located in some places. The pottery industry is located at Jaynagar, Baruipur and Budge Budge. The manufacture of *gur* (molasses) is mainly carried on in Jaynagar and also throughout the Diamond Harbour Sub-division. Areas nearer to Kolkata have few button making and manufacture of steel trunks units. Cotton handloom weaving, which is an old time industry, still manages to survive with the help of the co-operatives in Bhangar, Begampur, Deara, Kanyanagar etc.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The handicrafts of the district deserve special mention. The mats and asans (small sitting mats), earthen dolls and images, cane and bamboo products etc. are famous. Undivided South 24 Parganas were the home of jute industry. After the bifurcation of the district the jute industries that fall on this side are still running. But the market of jute is narrowed due to its high costing and launching of plastic bags as its substitute.

The industrialization of the district got a big blow during the last decade with the closer of big unit like Bata Shoe Industry. The only notable industry of the district is the Garden Reach Ship Builder & Engineers Ltd. which is a Government of India enterprise under the Ministry of Defence since 1960.

Solar energy is used in electrifying the areas of Sundarbans. The State Government has appointed West Bengal Renewable Energy Development Agency (WBREDA) for installing and utilizing solar power to illumine the area. They are acting as the nodal agency for its solar power project for the Sundarbans. West Bengal Electronics Industry Development Corporation Limited (WBEIDC) a Government of West Bengal enterprise has undertaken the challenging task of providing non-traditional electricity to the district. They have installed one SPV Power Plant in Gangasagar which is capable of generating 26 Kilowatts of power. Wind Farm at Bakkhali-Fraserganj produces 2 megawatts of electricity. Homes in various parts of Sundarbans receive this non-traditional electricity. Streets are lightened with solar lamps also. Besides Webel, some other private companies such as Agni Power, Tata, BP Solar, Geetanjali Solar, Exide etc. have also come forward and have installed their own Power Plants.

Trade and Commerce: Paddy, rice, jute, wheat, pulses, chillies, watermelon, coconut, varieties of vegetable etc. grows in the district due to the presence of abandon sweet water rivers. These are marketed at different points of the district. Presently paddy and rice marketing is done through Government run authorized agent i.e. the Food Corporation of India. Another Government run agency, the Jute Corporation of India controls raw jute trade. As for Government intervention, the farmers are ensured with minimum support price as fixed by the Government of India.

Among the vegetables, the most commonly grown and marketed vegetables are cabbage, cauliflower, tomato, radish, brinjal, patal, jhinga, ladies finger, sweet pumpkin, battle gourd, bitter gourd, papaya, spinach, carrot, beet and potato. The most important wholesale markets for vegetables in the district are Baruipur and Bhangar. Chilli and coconut are the most important cash crops of the districts. Chilli is marketed from Chhoto Mollakhali and Kakkdwip while coconut is marketed from Amtala and Bhangar. Kakkdwip, Diamond Harbour, Kolkata and its suburbs are assembling markets of Watermelon which is grown in Sundarbans in rotation with paddy and chillies. Pulses, sugar, gur (molasses), mustard seeds

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

and oil, fruits, potato and onion are imported agricultural produce of the district. Both fresh water and salt water fishes are exported from the district in great qualities. The fish is also being sold locally.

Imported agricultural produce in the district are Pulses, Sugar, Gur, Mustard seeds and oil, Fruits, Potato and Onion. Export trade of the district mainly consists of jute and mesta, vegetables, chillis, fruits (especially guava, watermelon and coconut), fish and gur.

Transport: Due to abundance of waterways, the district got water transport from a very old time. Early trade and commerce of the district were performed by waterways only.

Road transport of the district is only a recent development. The total length of roads maintained by PWD is divided into four categories – National Highways, State Highways, District Roads and Village Roads.

9.3 POTENTIAL ENVIRONMENTAL AND SOCIAL IMPACTS AND THEIR MITIGATION MEASURES

Environmental assessment helps in identifying the likely impacts due to project activities for all stages of the project viz, construction and operation stage on the physical, biological and social environment.

The three major activities involved in the project development which may have impacts on environment at different stages are construction and operation of civil interventions, capital and maintenance dredging and operation of vessels. These activities may impact different environmental components at different stages of project life cycle. The details are follows:

9.3.1 Impacts during Construction Phase

A. IMPACTS DUE TO EXCESS SOIL/ DREDGING MATERIAL/ WASTE

The excess soil and muck generated from various construction activities, waste from construction vehicles, fuel lubricants, machinery & maintenance equipment needs to be properly disposed, so as to avoid adverse impacts. The impacts however, shall be marginal. The solid waste generated due to various construction activities should be disposed off at designated disposal ground.

Capital and Maintenance dredging is proposed for Class VII waterways. Dredging may change the water quality, river bed topography and benthos if not prevented. These activities must not occur in sites protected for drinking water supply and fish spawning.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The total quantity of muck generated due to dredging will be 57,444 cum. It is proposed that the muck will be used for dumping in low lying area located on both sides of the river bank all along the waterway.

B. IMPACTS ON LAND

The impact associated with the land environment during design and construction phases are as follows:

- Loss of land / land acquisition:

There are three Ferry ghat along the river located at Hajra, Dwarikanagar and Addhabazar, however Addhabazar is closed. Hajra and Dwarikanagar ghats are locally maintained and operated. It is proposed to develop these two terminal complex area and provide inland water transport facilities like Gangway and Pontoon at these two ferry ghats for passenger embarking and disembarking. About 1200 m² of area will required for passenger ferry terminal complex area. No additional land is required to be acquired for terminal construction as the ferry ghats are already operational at the proposed locations. Only upgradation works are required to be done for terminal development.

- Change in topography
- Change in land use
- Deterioration of soil quality due to spillage of fuel, disposal of muck and any other construction material.

Mitigation Measures:

- ✓ Excavation and filling tasks should be carried out simultaneously so as to minimize the soil erosion. Unusable debris material should be suitably disposed off at designated site with prior approval from concerned authority
- ✓ Compaction of soil should be undertaken by controlled sprinkling the water to minimize the surface runoff and erosion.
- ✓ Agricultural land should be avoided for setting up construction camps, plant site or any other construction purpose
- ✓ Water sprinkling to be carried out for dust suppress

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- ✓ Dredging soil should be proper utilized as proposed for flood protection measures around the terminal area.

C. IMPACTS ON SOIL

The site clearance process includes excavation and vegetation clearance for development activities, which ultimately induces vegetation loss as well as loss of top soil. Since, the vegetation clearance shall be confined to the minimum area; the area affected would be very less. The activities associated with the site preparation and excavation plus movement of vehicles and equipments can disturb the surrounding lands

Contamination of Soil: Contamination of soil is primarily due to construction and allied activities. The sites where construction vehicles are parked and serviced are likely to be contaminated because of leakage or spillage of fuel and lubricants. Refuse and solid waste from labour camps can also contaminate the soil. Contamination of soil during construction might be a major long-term residual negative impact. Unwarranted disposal of construction spoil and debris will add to soil contamination. This contamination is likely to be carried over to Saptamukhi River in case of dumping being done near River locations. However, by following mitigation measures such as maintenance of vehicles and machines and fuel refilling is carried out in a confined area can avoid contamination of soil to a great extend. The provision for oil interception chamber is suggested in EMP for treating the waste water generated from vehicle washing, refilling and maintenance areas. Fuel storage and refilling sites should be kept away from cross drainage structures and important water bodies. All spoils shall be disposed off as desired and the site shall be fully cleaned before handing over. These measures are expected to minimise the impact on soil contamination.

Compaction of Soil: Compaction of soil may anticipate due to the movement of construction vehicles and heavy machines. Thus regulation of movement of heavy equipments and vehicles shall be essential to prevent this.

Mitigation Measures:

- ✓ Rehabilitate all sites during construction including construction camps, stockpile area, temporary access and hauling routes, as soon as possible after the disturbance has ceased.
- ✓ Contractor to exercise strict care in the disposal of construction waste, with proof of disposal at an approved site provided after offloading each waste load and this logged/registered.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- ✓ Contain contaminated water and dispose off site at an approved disposal site in consultation with State Pollution Control Board.
- ✓ Dispose of waste from the oil interceptors only through suitable waste-handling contractor and request for safe disposal certificates.
- ✓ The movement of construction vehicles and equipments will be restricted to only designated route.
- ✓ Mix cement, concrete and chemicals on a concrete plinth and contain spillages or overflows into the soil.
- ✓ Vehicle maintenance are not allowed on site.
- ✓ If oil spills occur, disposing contaminated soil at a disposal site in consultation with State Pollution Control Board.
- ✓ Stockpiling of subsoil and overburden in all construction and lay down areas.

D. IMPACTS ON AIR

The air quality parameter is the most common environmental feature, which is being affected by any infrastructure improvement projects at different stages i.e. during constructional as well as operational phase. The major indicators of Ambient Air Quality relevant to the project are the concentration of Particulate matters of size less than 10 μ (PM10), Particulate matters of size less than 2.5 μ (PM2.5), Sulphur dioxide (SO₂), Nitrogen oxides (NO_x), Carbon monoxide (CO) in the atmosphere.

Sensitive receptors and nearby habitation area may be affected temporarily by increased of traffic due to movement of construction vehicles and transportation of material. Fugitive dust can also impact on air quality due to various construction activities. Exhaust fumes from construction machinery, and potential smoke from cooking fires, burning of waste and cleared vegetation also affect the air quality. The improper sanitation at worker camps and waste disposal usually lead to odour problem. The problems related to the deterioration of air quality, however, will temporal in nature till the construction period only.

Vegetations existing at terminal development site will be removed. Bare & loose soil after vegetation uprooting/removal will be exposed to wind and will add on to the concentration of ambient dust levels. Air quality will also be affected in case tree cutting is undertaken at site as the tree act as air purifiers

Mitigation Measures:

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- ✓ All the Construction vehicles and machineries will be regularly maintained to conform to the emission standards stipulated under Environment (Protection) Rules, 1986.
- ✓ All the DG sets will conform to the emission standards as stipulated under Environment (Protection) Rules, 1986.
- ✓ Undertaking monitoring of air pollution levels as per monitoring plan in potential problem areas.
- ✓ Avoid dust generating construction activities during strong winds.
- ✓ Cover soil loads in transit.
- ✓ Cover stockpiles of soil or apply suitable dust palliative such as water or commercial dust suppressants.
- ✓ Regularly service vehicles off-site in order to limit gaseous emissions.
- ✓ No open fires permitted on site
- ✓ Place portable toilets on-site and maintain on a daily basis.
- ✓ Water will be sprayed in construction area and other excavation areas for suppressing fugitive dust.
- ✓ Transportation material should be Water sprinkled and covered with tarpaulin.
- ✓ Dust emission from stock piles of excavated material will be controlled either by covering the stockpiled materials or water spraying over it.
- ✓ Special attention will be given when working near educational institutions and health centers and settlement areas.
- ✓ As soon as construction is over all the surplus earth will be utilized properly and all loose earth will be removed from the site.
- ✓ Compensatory plantation of trees having adequate canopy should be implemented.

E. IMPACTS ON AMBIENT NOISE AND VIBRATION

The proposed construction activities are expected to increase the noise levels mainly due to plying of construction vehicles, pumping machines, use of portable generators, mechanical machinery etc. These activities will occur round the clock and the noise pollution thus created may affect human habitations, particularly during the night time. Increase of noise level at night may cause discomforts to population in the vicinity of the site in case construction activity is extended into the night hours.

Sensitive receptors and nearby habitation may be affected temporarily by increased traffic due to movement of heavy construction vehicle and equipments, which may generate high levels of noise.

Vibrations resulting from bulk earthworks, micro-tunneling and compaction may create significant disturbances to nearby area.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Mitigation Measures:

- ✓ All noise generating equipment's and construction camps will be installed sufficiently away from settlement and sensitive areas.
- ✓ Restrict construction activities to reasonable working hours where near sensitive receptors.
- ✓ Keep adjacent landowners informed of unusually noisy activities planned.
- ✓ The main stationary noise producing sources such as generator sets shall be provided with noise shields around them. The noise shields can either be a brick masonry structure or any other physical barrier which is effective in adequate attenuation of noise levels.
- ✓ The plants and equipment used for construction will strictly conform to CPCB noise standards and ensures that machinery in a good state of maintenance
- ✓ Vehicles and equipments used will be fitted with silencer and maintained accordingly.
- ✓ Noise to be monitored as per monitoring plan and if the noise level at any time found to be higher than immediate measure to reduce noise in that area will be ensured.
- ✓ An awareness programme may be organized for drivers and equipment operators to make them aware of the consequences of noise and to act properly at site.

F. IMPACTS ON ECOLOGY AND BIODIVERSITY

The proposed development is situated along the Saptamukhi River. No such significant ecologically diverse area occurs within the proposed project location. Hence no major impact on ecology is anticipated. However capital and maintenance dredging is proposed for Class VII waterways, which may have likely impact on population of phytoplankton, zooplankton, benthic communities and fishes, but temporary in nature.

Mitigation Measures:

- ✓ Ensure any landscaping to be undertaken will be done with locally indigenous species and low maintenance requirements.
- ✓ Capital and maintenance dredging should avoidable during breeding season of aquatic fauna.
- ✓ The generated muck due capital and maintenance dredging should not be disposed off in the waterway.

G. IMPACTS ON RIVER WATER

The impact on water arises due to the following:

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Discharge of sewage and wastewaters from construction sites and camps to surface waters
- Re-suspension of sediments contaminated with heavy metals during the construction of the terminal.
- Risk of accidental spillages of oils, fuels, and other materials

Mitigation Measures:

- ✓ The site surface has been engineered and shaped in such a way that rapid and efficient evacuation of runoff is achieved.
- ✓ Provide containment areas for potential pollutants at construction camps, refueling, depots, asphalt plants and concrete batching plants.
- ✓ Implement waste management practices.
- ✓ Control and manage transport, storage, handling and disposal of hazardous substances.

H. IMPACTS DUE TO LABOUR CAMP

Construction workers are neglected group in the country. Unless the workers are provided proper amenities to live at the construction site the environmental issues of project cannot be properly met. Location of the Construction camp also has certain impacts on surrounding environment if not properly managed.

At labour and construction camps lot of wastes are generated. These wastes are refuse from the plants, and equipments, waste water and other domestic waste. These wastes are solid as well as liquid waste mainly refuse water and kitchen waste. The disposal of such waste material to the surrounding land can potentially damage the land and would generate health risk to not only surrounding area but within the premises itself. Improper drainages system within the premises also creates insanitation condition thereby enhancing health risk.

Maximum labour to be employed in the project shall come from nearby areas. Some labour is expected to be migrated from other areas and is likely to put some stress on account of the following:

- Generation of sewage from labour colony.
- Generation of solid waste from labour colony.

Mitigation Measures:

- ✓ The Construction/labour camps will be established only on approved area.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- ✓ The worker's/labour camp will be located away from water bodies, schools and residential areas. The camp will be constructed with proper accommodation facilities.
- ✓ The workers camp will be provided with drinking water supply system so that local water sources are not disturbed.
- ✓ The camp should be provided with fuel for cooking like kerosene and /or LPG to avoid any cutting of trees for fuel wood.
- ✓ All camps will be provided with proper sanitation facilities, separate toilets and bathrooms for female and male workers, septic tanks with soak pits of sufficient size, dust bins etc.
- ✓ Waste water from domestic uses and solid wastes will be disposed of without violating environmental norms. The measures will be site specific.
- ✓ The labour camps will be provided with crèche, first aid facilities, etc as required under Factory Act.
- ✓ After completion of construction, the contractor will dismantle the camp and restore it to the original condition of the area before handing over the site to the land owner.

I. SOCIAL IMPACTS

- Impacts on Socio-economic environment

No impact will be envisaged on socio-economic environment

- Impacts on the Regional Economy

There would be benefits to the local and regional economy through the direct demand for construction goods and services associated with construction activities.

- Health and Safety

One of the potential impacts of the proposed project will be on the air quality due to the dust generated during construction. The amount of dust generated will depend upon the level of digging and the prevailing weather conditions. Based on past experience, the air pollution due to entrainment of fugitive emission is marginal in nature and is observed up to a distance of 100 to 200 m from the point of entrainment. Thus, it is expected to lead to marginal impact on ambient air quality. No major health related issues due to air pollution during construction phase of the proposed project are anticipated.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Construction related activities may lead to injuries. Open fires in construction camp can result in accidents. Safety of workers and general public may be compromised due to difficult site conditions. Poor waste management practices and unhygienic conditions at temporary ablution facilities can breed diseases. Standing water due to inadequate storm water drainage systems, inadequate waste management practices, pose a health hazard to providing breeding grounds for disease vectors such as mosquitoes, flies and snails. The use of hazardous chemicals in the micro-tunneling and restoration of roads can pose potential environmental, health and safety risks. Road safety may be affected during construction, especially when traffic is detoured.

Mitigation Measures:

- ✓ Implement good housekeeping practices at the construction camp.
- ✓ Strictly implement health and safety measures and audit on a regular basis.
- ✓ Secure enclosed construction site.
- ✓ Use reputable contractors.
- ✓ Provide warning signs of hazardous working areas.
- ✓ The plants and equipments will be installed sufficiently away from the settlement.
- ✓ All the construction equipments and vehicles will conform to the emission standards stipulated by the CPCB.
- ✓ Clearly demarcate excavations and provide barriers (not just danger tape) to protect pedestrians from open trenches.
- ✓ Thoroughly train workers assigned to dangerous equipment.
- ✓ Workers have the right to refuse work in unsafe conditions.
- ✓ Undertake waste management practices (Planned disposal of sludge from pumping stations within surrounding areas of PS) particularly for Pumping Station
- ✓ Control speed and movement of construction vehicles
- ✓ Exclude public from the site
- ✓ Ensure all workers are provided with and use Personal Protective Equipment.
- ✓ Ensure the visibility of workers through their use of high visibility vests when working in or walking through heavy equipment operating areas
- ✓ Ensure that qualified first-aid can be provided at all times. Ensure equipped first-aid stations are easily accessible throughout the site;
- ✓ Provide medical insurance coverage for workers.
- ✓ Provide clean eating areas where workers are not exposed to hazardous or noxious substances;

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- ✓ Provide visitor orientation if visitors to the site can gain access to areas where hazardous conditions or substances may be present. Ensure also that visitor/s do not enter hazard areas unescorted;
 - ✓ Ensure moving equipment is outfitted with audible back-up alarms;
 - ✓ Mark and provide sign boards for hazardous areas such as energized electrical devices and lines, service rooms housing high voltage equipment, and areas for storage and disposal. Signage shall be in accordance with international standards and be well known to, and easily understood by workers, visitors, and the general public as appropriate.
 - ✓ Safe working techniques will be followed up and all the workers will be trained
 - ✓ Proper caution signage, barricading, delineators etc. will be installed at Construction zone and temporary diversions
 - ✓ Proper traffic management will be ensured at the Construction zone as per IRC.
 - ✓ An Emergency Response system in case of any incidence will be developed and implemented
 - ✓ Periodical health check facility will be provided at camp sites.
- Aesthetics

The presence of heavy duty vehicles and equipment, temporary structures at construction camps, stockpiles, may result in impacts on aesthetics and landscape character.

Mitigation Measures:

- ✓ Properly fence off storage areas.
- ✓ Collection of all domestic solid waste central point of disposal and feed into the city waste collection system.
- ✓ Contractor to exercise strict care in disposing construction waste.
- ✓ Identifying suitable waste disposal site with enough capacity to hold additional waste to be generated by the construction activities.
- ✓ Retaining mature trees on and around the site where possible.
- ✓ Removing unwanted material and litter on a frequent basis.
- ✓ Reinstate pathways and other local infrastructure immediately to at least their pre-project condition upon completion of construction.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Employment Generation

The project will provide employment opportunities for local people during construction. Expectations regarding new employment will be high especially among the unemployed individuals in the area. Labor gathering at the site for work can be a safety and security issue, and must be avoided. The training of unskilled or previously unemployed persons will add to the skills base of the area.

Mitigation Measures:

- ✓ Employing local labour
- ✓ Training of labour to benefit individuals beyond completion of the project.
- ✓ Ensure recruitment of labors will take place offsite.
- ✓ Ensure at least 50% of all labor is from surrounding communities in the contractual documentation.

9.3.2 Impacts during Operation Phase

A. IMPACTS ON AIR

Sensitive receptors and nearby habitation area may be affected temporarily by increased traffic and other related impacts.

Exhaust gases from moving vessel are source of air pollution. However, vessels emit least air emissions compared to the road and railway modes. The impact on air quality due to vessel movement is anticipated insignificant considering the emission levels and projected vessel traffic.

Mitigation Measures:

- ✓ Ensure compliance with the Air Act.
- ✓ Ensure compliance with emission standards
- ✓ Regularly service vehicles off-site in order to limit gaseous emissions
- ✓ Material generating dust should be transported under covered condition
- ✓ Uses of cleaner fuel
- ✓ Material should be stored under cover sheds
- ✓ Water sprinkling should be carried out during all loading and unloading activities and storage period.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

B. IMPACTS DUE NOISE AND VIBRATION

Noise generated during operation phase are improper handling and irregular maintenance of operating machines, which may lead to increased noise pollution during operation phases, which would affect the daily life of the surrounding neighborhoods. However, impacts on this account are expected to be marginal.

Mitigation Measures:

- ✓ Restrict maintenance activities to reasonable working hours where near sensitive receptors.
- ✓ Keep adjacent landowners informed of unusually noisy activities planned.
- ✓ Fit and maintain silencers to all machinery on site.
- ✓ Monitor noise levels in potential problem areas
- ✓ Personal Protective Equipment (PPE) should be provided to the worker working.
- ✓ Use of DG set with acoustic enclosure.

C. IMPACTS DUE TO OIL SPILLAGE FROM BARGES AND VESSELS

There may be possibility of oil spillage from barges/vessels during oil transportation. This affects the water quality and aquatic ecology of the river.

Mitigation Measures:

- ✓ All waste water and solid waste or maintenance waste should be disposed at the designated barge maintenance facility only.
- ✓ The wastewater from vessels can be sent to STP for treatment and the treated water can be used for landscaping and dust suppression at terminal sites
- ✓ Vessels also may have some facilities for treatment of the waste generated
- ✓ Provision of oil water interceptors
- ✓ Vessels should not be washed or cleaned at terminal/jetty facility and washings should not be discharge at the terminal/jetty location. Washing should be undertaken only at the maintenance facility only.

D. IMPACTS ON WATER

Maintenance dredging & on-shore dumping of dredged material is the sources which may impact the water quality of river.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Mitigation Measures:

- ✓ Dredging material should be disposed to the designated area.

E. IMPACTS ON FLORA AND FAUNA

The proposed development is unlikely to have any significant impact on biodiversity. However, maintenance dredging may impact the growth of aquatic life. Impacts may also arise during the movement of vessel/barges.

F. IMPACTS ON HEALTH AND SAFETY

- Danger of operations and maintenance-related injuries.
- Safety of workers and general public must be ensured.
- Poor waste management practices and unhygienic conditions at the improved facilities can breed diseases.
- Standing water due to inadequate storm water drainage systems, inadequate waste management practices, pose a health hazard to providing breeding grounds for disease vectors such as mosquitoes, flies and snails.
- Fire and electrocution hazards in the pumping stations.

Mitigation Measures:

- ✓ Implement good housekeeping practices at terminal and jetty area.
- ✓ Strictly implement health and safety measures and audit on a regular basis.
- ✓ Provision of warning signs of hazardous working areas.
- ✓ Training of workers assigned to dangerous equipment.
- ✓ Undertaking waste management practices- specifically periodic removal of sludge from pumping stations.
- ✓ Ensuring all workers are provided with Personal Protective Equipment.
- ✓ Provision of medical insurance coverage for workers

G. IMPACTS ON REGIONAL ECONOMY

The project is expected to bring the economic benefits of the region directly through expansion of regional trade, increase new business opportunity, development of new industries. It will also decrease the travel time for crossing one bank to another through ferry facilities.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

9.4 ENVIRONMENTAL MANAGEMENT PLAN (EMP)

The main aim of the Environmental Management Plan (EMP) is to ensure that the various adverse impacts are mitigated and the positive impacts are enhanced. The EMP identifies the potential issues of various activities that are anticipated in the design and development, construction, and operation phases of the proposed project. The EMP ensures to suggest appropriate mitigation measures against the issues/ concerns identified during the environmental study.

9.4.1 Implementation of EMP

A copy of the EMP must be kept on site during the construction period at all times. The EMP will be made binding on all contractors operating on the site and will be included within the Contractual Clauses. Non-compliance with, or any deviation from, the conditions set out in this document constitutes a failure in compliance.

The contractor shall be responsible to implement the EMP primarily in assistance with the Supervision Consultant team. The Environmental Specialist from the Supervision Consultant shall monitor the compliance of the EMP.

9.4.2 Environmental Management Action Plan

This section describes the Environmental Management Action Plan for the proposed project during different stages of project. The Environmental mitigation measures have been incorporated at all the stages of the project right from Designing phase to Construction and Operational Phase. The Management Plan has been formulated for implementation of environmental mitigation measures to be carried out and to ensure that the provisions of the EMP are strictly followed and implemented by strengthening implementation arrangements to prevent and minimize the adverse environmental impacts during Construction phase of the project. EMP has also addressed certain environmental measures to be taken to prevent further deterioration of environment components for various stages of the project.

Appropriate measures have also been identified for action during various stages of the project, viz, Design and Pre-Construction, Construction and Operational phases. The measures identified for all three phases, are tabulated in **Table 39** which describes the nature of the potential environmental impact, the measures, which have or will be taken, the timeframe in which they are taken, the implementing agency and responsible organization.

Washing should be undertaken only at the maintenance facility only. | | |

9.5 APPLICABLE LEGAL AND REGULATORY FRAMEWORK

The increase of environmental concern also necessitated appropriate tools/actions to protect environment. During Stockholm Conference, first exclusive Environmental Protection Act was enacted in India in 1986. Prior to this umbrella act, Water (Pollution Prevention and Control) Act was enacted in India in 1974 & Air Pollution act, 1981. In accordance with EPA act (1986) Central and State Boards for Prevention and Control of Water Pollution were set up. Later these boards were renamed into Central Pollution Control Board and respective State Pollution Control Boards. Department of Environment was set up in 1980. Subsequently in 1985, it was upgraded to a full-fledged Ministry of Environment and Forests and Climate Change (MoEFCC) under Government of India to serve as the focal point in the administrative structure for the planning, promotion and coordination of environmental and forestry programmes. The name of MoEF has been revised in the year 2014 to Ministry of Environment, Forests and Climate Change (MOEFCC). This ministry has overall authority for the administration and implementation of government policies, laws and regulations related to the environment, including conservation, environmental assessment, sustainable development, forest conservation and pollution control. MOEFCC identifies the need to enact new laws and amend existing environmental legislation when required, in order to continue to conserve and protect the

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

environment. At the state level, the MOEFCC authority is implemented by the Department of the Environment and the Department of Forests.

In 1976, the 42nd Constitutional Amendment created Article 48A and 51A, placing an obligation on every citizen of the country to attempt to conserve the environment. As a result, a number of laws related to environmental conservation were passed to strengthen existing legislation. Environment (Protection) Act, 1986 is the landmark legislation as it provides for the protection of environment and aims at plugging the loopholes in the other related acts and this Act is called as umbrella Act. Under this Umbrella Act all the environmental acts and rules have been formed.

The laws and regulation applicable under the programme:

- Policy and Regulatory Framework of Government of India
- Environmental Policy of respective State Government
- Legislation applicable to construction activities

9.5.1 Key Environmental Laws and Regulations

The relevant Acts and Rules are given in the **Table 40**.

Table 40: Key Environmental Laws and Regulations

| Acts/Rule/ Policy | Year | Objective/ criteria | Authority | Applicability | | Remarks |
|---|------|--|--|---------------|----|--|
| | | | | Yes | No | |
| Environmental (Protection) Act | 1986 | To protect and improve the overall environment. | MOEFCC. GoI; CPCB, West Bengal State Pollution Control Board | √ | .. | This act is applicable to all environmental notifications, rules and schedules are issued under this act. |
| Environment Impact Assessment Notification | 2006 | To provide environmental clearance to new development activities following environmental impact assessment | MOEFCC | -- | √ | Environment Impact Assessment Notification has been issued for requirement of EIA and activities requiring clearance |

9.6 NEED FOR ENVIRONMENTAL CLEARANCE

The proposed project will not require Environmental Clearance as per MoEFCC letter No. F. No. 14-9/2016-IA-III dated 21st December 2017. The letter is enclosed as **Annexure 4**.

9.7 OTHER MAJOR CLEARANCES / APPROVALS / PERMITS APPLICABLE TO THE PROJECT

The CRZ Clearances will be applicable as per the CRZ Notification 2019

The other clearances and permits required for project at different stages is given in **Table 41**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

10.0 INSTITUTIONAL REQUIREMENTS

In view of collective development of NW-97 (Sunderbans waterways), and the proposed infrastructure development along Saptamukhi waterway, it is recommended that the development of Saptamukhi waterway shall be handled by Project Management Unit (PMU) proposed for development of Thakurran waterway, under the jurisdiction of Director, Inland Waterways Authority of India, Kolkata. Accordingly, the cost of development of Institutional requirement is considered in Thakurran waterway DPR.

The Institutional facilities proposed in all 13 rivers of NW-97 and the names of waterways supported by them are provided as below:

| Sl. No. | Name of waterway supported by proposed Institutional facility | Name of Jetty/Terminal where Institutional facility is proposed to be set up | Name of waterway in which cost of Institutional facility is considered |
|---------|---|--|--|
| 1. | Muri Ganga waterway | Dhaki Jetty | Thakurran waterway |
| 2. | Saptamukhi waterway | | |
| 3. | Thakurran waterway | | |
| 4. | Matla waterway | Basanti Jetty | Hogla waterway |
| 5. | Bidya waterway | | |
| 6. | Gomar waterway | | |
| 7. | Hogla waterway | | |
| 8. | Chhota Kalagachi waterway | Bhandarkhali Jetty | Sahibkhali waterway |
| 9. | Raimangal waterway | | |
| 10. | Sahibkhali waterway | | |
| 11. | Katakhali waterway | | |
| 12. | Kalindi waterway | | |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

11.0 PROJECT COSTING

The project cost estimates for development of the Inland Water Transport system as well as for maintenance of the system have been worked out. The cost estimates for development of the system are termed as capital cost while for operation of the system is termed as maintenance or operating cost.

11.1 BASIS OF COSTING

The basis of cost estimates worked out as per following:

- a) Standard Schedule of Rates of PWD, Govt. of West Bengal.
- b) "Unified Schedule of Rates" prepared by Irrigation and Waterways department, Government of West Bengal.
- c) The consultants experience on various projects sites proximity to the project area.
- d) Local enquiries at the time of conducting surveys.
- e) Market surveys and enquires
- f) Judgement based on Consultant's Experience

11.2 DEVELOPMENT COST

Saptamukhi waterway is proposed to be developed as Class VII waterway. The development cost for waterway comprises of:

- a) Cost for fairway development comprising dredging and navigation & communication system
- b) Cost of pontoon and gangway
- c) Vessel Cost
- d) EMP cost.

11.3 CAPITAL EXPENDITURE

The expenses expected to be incurred in construction and development of the waterway, terminal structures including jetties and procurement of vessels are considered as capital expenditure. The detail capital cost estimated to be incurred on the basis of proposed infrastructure and preliminary design at this stage of studies is provided in **Table 49**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Table 49: Summary of Capital Cost of Project

| Sl. No. | Item | Reference Table | Amount in Lakh (INR) |
|---------|---|-----------------|----------------------|
| 1.0 | Capital cost for Fairway Development | | 114.89 |
| 2.0 | Capital cost for Pontoon and Gangway at 3 locations | Table 23 | 221.09 |
| 3.0 | Capital Cost for one (1) Passenger ferry Vessel | Table 27 | 35.00 |
| 4.0 | Capital Cost for Aids to Navigation and Communication | Table 30 | 279.25 |
| 5.0 | Cost allotted for EMP | Table 48 | 99.07 |
| | Total Capital Cost | | 749.30 |

11.4 OPERATIONAL AND MAINTENANCE EXPENDITURE

The detail O&M cost estimated to be incurred on the basis of proposed infrastructure and preliminary design at this stage of studies are provided in **Table 50** as below:

Table 50: Summary of annual O & M Cost of Project

| Sl. No. | Item | Reference Table | Amount in Lakh (INR) |
|---------|---|-----------------|----------------------|
| 1.0 | O&M cost for Fairway Development | | 11.49 |
| 2.0 | O&M cost for Pontoon and Gangway at 3 locations | | 6.63 |
| 3.0 | O&M Cost for One (1) Vessel | Table 28 | 9.51 |
| 4.0 | O&M Cost for Aids to Navigation and Communication | Table 31 | 167.02 |
| 5.0 | EMP Cost during operation stage | Table 48 | 25.88 |
| | Total O&M Cost | | 220.53 |

11.5 PHASING OF EXPENDITURE

Based on the analysis of the Construction Schedule for a period of 1 years, the phasing of expenditures has been established during construction period. The detail of cost repartition during construction period is provided in **Table 51** and also shown in **Figure 53** below.

Table 51: Phasing of Expenditure

| Months > | M1 – M3 | M4 – M6 | M7 – M9 | M10 – M12 |
|--------------------------|---------|---------|---------|-----------|
| Total Cash Flow INR Lakh | 112.40 | 224.79 | 224.79 | 187.33 |
| % of Cash Flow | 15% | 30% | 30% | 25% |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The phasing of expenditure in the form of bar chart is provided below.

Figure 53: Phasing of Expenditure

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

12.0 IMPLEMENTATION SCHEDULE

The implementation schedule for the development of Saptamukhi waterway and its associated facilities are presented in this chapter. The probable time schedule for various activities from onset to completion of the project and commencement of operation are also discussed in this chapter.

12.1 TIME FRAME

The time schedule for construction activities of the project is considered as one (1) year. The proposed project schedule is provided in **Figure 54** as below.

| Sl. No. | Activities | 1 st Quarter | 2 nd Quarter | 3 rd Quarter | 4 th Quarter |
|---------|--|-------------------------|-------------------------|-------------------------|-------------------------|
| 1 | Approval of DPR and Project Financial Closure | | | | |
| 2 | Environmental, Forest and CRZ clearances | | | | |
| 3 | Fairway development | | | | |
| a) | Procurement of Hardware and other equipment's | | | | |
| b) | Capital Dredging | | | | |
| 4 | Procurement and installation of Aids to Navigation | | | | |
| 5 | Construction/ Installation of Pontoon and Gangway | | | | |
| 6 | Upgrading existing road to terminals | | | | |

Figure 54: Construction Schedule

12.2 PHASING

For timely completion of the project, identification of major project components and sequential planning of various modules is very important for any project. The major components of Saptamukhi waterway include both the construction of offshore and onshore facilities, apart from installation of mechanical and electrical equipment's.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The offshore facilities includes development of pontoon, gangway, approach platform and dredging whereas the development of onshore facilities includes site development, construction of terminal building and providing utilities like water supply system, sewerage system, storm water drainage system and firefighting facility.

The schedule has been prepared with the presumption that IWAI will be developing the project in single phase through EPC contract.

12.3 SUGGESTED IMPLEMENTATION MECHANISM

The various activities to be carried out prior to commencement of construction, includes selection of site, preparation of detail engineering drawings & Report, survey and investigation, Social and Environmental Impact Assessment, preparation of tender document, Bid process management, selection of EPC contractor and award of work to the selected contractor. It is assessed that the lead time required to carry out the bid process management and selection of EPC contractor would be 3 months.

The schedule for the project also depends on the schedule of various Statutory Clearances required from different Statutory Agencies for the development of the project and therefore, all the requirement clearances need to be in place before the start of the construction activities.

The following are the major activities involved for effective completion of Saptamukhi waterway project, which involves engineering, procurement, construction and commencement of operational activities.

Pre Construction activities:

- Detailed Engineering;
- Environmental clearance (if any);
- Financial closure and Statutory approvals from all concerned authorities as per Para 9.5;
- Land acquisition and site development;

Construction activities:

- Construction of onshore facilities for ferry terminal;
- Construction of offshore facilities for ferry terminal;
- Procurement of vessels;

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- Up gradation/construction of access roads;
- Supply, installation and commission of electrical and mechanical equipment's.

Post Construction activities:

- Defect Liability period.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

13.0 ECONOMIC AND FINANCIAL ANALYSIS

Financial feasibility is a key determinant in a business oriented investment decision. In case of the projects of public/national interest like development of Inland Water Terminals, the viability of the project depends on the economic feasibility which act as the deciding factor. In this chapter, the financial and economic viability for development of Saptamukhi Waterway is worked out.

13.1 REVENUE

An attempt has been made to estimate the possible revenue available from this service. Although this has been calculated in a thorough and logical manner the study is based on many assumptions and it should therefore be taken as a guide to the magnitude of possible revenue. Downtime of 2 months is considered, which could be occurred due to weather, operational or other factors. Hence, it is assumed that the full service is operating for 300 days annually

The techno-economic model has been run with the following considerations as stated below:

- a) Passenger Ferry services - passenger ferry vessels of 25 pax capacity operating 6:00 AM to 6:00 PM.
- b) Number of days of operation – 300 days.
- c) OD pair link – Hajra and Haripur ferry ghat
- d) One-way trip length – 0.2 Km.
- e) For revenue estimation, present daily passenger traffic in the proposed OD pair of 200 passengers is considered.

The revenue for passenger ferry services has been worked out by considering the variable tariff from INR 1.00 per person per KM onwards as per following formula:

$$\text{Revenue (INR)} = T \times L \times (1+R)^Y \times P \times D$$

where;

T = Proposed tariff in INR/Km/pax

L = OD pair length in Km

R = Incremental rate of tariff in %, assuming at 8% per year on the basis of CPI Index of last 2 years

Y = Year of service from start date of operation

P = Peak Passenger traffic per day in a year

D = Days of operation per year, considering as 300 days per year.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

13.2 FINANCIAL ANALYSIS/ FIRR

The introduction of the IWT will yield tangible and non-tangible saving due to equivalent reduction in road traffic and certain socio-economic benefits. These include saving in road construction and maintenance, vehicle operation costs, travel time and other socio-economic benefits of travel time, better accessibility, better comfort and quantity of life, increase in mobility etc.

The direct and indirect benefits of the project are following:

- Reduced road stress.
- Better accessibility to facilities in the influence area.
- Economic stimulation in the micro region of the infrastructure.
- Increased business opportunities.
- Overall increased mobility.
- Facilitating better planning and up-gradation of influence area.
- Saving in vehicle operating costs of buses and other vehicles that are using the existing transport network after the IWT is introducing due to decongestion effect on road stress.
- Saving in time of passenger of existing modes, because of reduced congestion on road.
- Saving on account of reduction of vehicular pollution.

The financial analysis of the project is done on the basis of estimated cost proposed to be incurred for construction/development of fairway, terminal and procurement of vessels including other miscellaneous expenses, O& M cost proposed to be incurred during proposed project life cycle of 20 years and revenue that could be generated.

The implementation of this project has been conceptualized as Government funded project and in view of small capital cost, no loan has been considered. However, the FIRR for proposed waterway is done with following options:

Option 1: Total Capital Cost + Total O&M cost

Option 2: Option 1 - Vessel Capital & O&M cost

Option 3: Vessel Capital Cost + Vessel O&M Cost.

The Financial analysis for all the above options are worked out and provided in **Table 52** to **Table 54**.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

| FIRR (%) | | | | #NUM! | | 18.22% | | 103.76% | | 158.16% | | 176.46% | |

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

From the above analysis with various options it is concluded that the passenger ferry services in the waterway is financially not viable in all cases. However, as part of community development to provide safe and reliable water transport facilities for locals, the proposed project may be recommended for development by higher authorities.

13.3 ECONOMIC ANALYSIS / EIRR

In addition to above, economic benefit foreseen due to factors like reduction in pollution and accidents, carbon savings is considered for economic analysis. For the analysis following assumptions were made:

- a) Road haulage cost: INR 2.0/Ton-Km
- b) Road accident cost saving: INR 0.2/Ton-Km
- c) Carbon savings: INR 0.1/Ton-Km transferred from road
- d) Annual incremental economic benefit: 1%

Passenger ferry services are already operational from above proposed jetty locations, however a proposal for safe and efficient ferry services along with necessary infrastructure services are made in this DPR. Hence economic benefit due to road and rail haulage cost saving, road accident cost savings and carbon savings is not considered for economic evaluation for passenger ferry services. Also, as the ferry operations are currently active along the proposed fairway route, saving in fuel cost due to IWT operation is not foreseen. Benefit due to job creation is only considered for economic analysis of passenger ferry services. The economic benefit analysis with obtained minimum tariff with positive FIRR i.e. INR 50.0 per person per km for proposed OD pair, for all the three (3) options is provided in **Table 55**.

Table 55: EIRR from IWT

| Year | Economic Benefit (INR Lakh) | Option-1 | | Option-2 | | Option-3 | |

| 14 | 3.92 | -381 | -377 | -362 | -358 | 37 | 41 |
| 15 | 3.96 | -393 | -389 | -373 | -370 | 45 | 49 |
| 16 | 4.00 | -405 | -401 | -385 | -381 | 55 | 59 |
| 17 | 4.04 | -417 | -413 | -395 | -391 | 67 | 71 |
| 18 | 4.08 | -427 | -423 | -404 | -400 | 81 | 85 |
| 19 | 4.12 | -437 | -432 | -413 | -408 | 97 | 101 |
| 20 | 4.17 | -444 | -440 | -419 | -415 | 116 | 120 |
| EIRR (%) | | | #NUM! | | #NUM! | | 22.35% |

From the the above table, it is concluded that Saptamukhi waterway is economically not viable for all the three options.

Accordingly, as part of community development to provide safe and reliable water transport facilities for locals, the proposed project may be recommended for development by higher authorities. The Capital and O&M expenses estimated to be incurred for development of Saptamukhi waterway is considered as part of collective development of NW-97, Sunderbans waterways.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

13.4 LIFE CYCLE COST ANALYSIS

Life cycle cost analysis (LCCA) is an approach used to assess the total cost of owning a facility or running a project. LCCA considers all the costs associated with obtaining, owning, and disposing of an investment.

Life cycle cost analysis is especially useful where a project comes with multiple alternatives and all of them meet performance necessities, but they differ with regards to the initial, as well as the operating, cost. In this case, the alternatives are compared to find one that can maximize savings.

Life cycle cost analysis used to assess infrastructural projects make use of:

- capital expenditure, which is the initial cost involved when constructing or delivering an infrastructural asset.
- operating expense, which consists of a number of costs, including utility, manpower, insurance, equipment, health, and routine and planned repairs.
- Replacement costs, incurred every cycle based on the predefined age of replacement for different assets and the manufacturer's preference, and
- disposal cost.

**FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97
(SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)**

LCCA of Saptamukhi Inland waterway project is done for 20 years of project life cycle, considering the Capital and O&M expenses to be incurred in project phases are presented in below **Table 56**.

Table 56: Project Life Cycle Cost

| Year | Capital Cost (INR Lakh) | O&M (INR Lakh) | Total Outflow (INR Lakh) |
|------|-------------------------|----------------|--------------------------|
| -1 | 749 | | 749 |
| 0 | | 221 | 221 |
| 1 | | 232 | 232 |
| 2 | | 243 | 243 |
| 3 | | 255 | 255 |
| 4 | | 268 | 268 |
| 5 | | 281 | 281 |
| 6 | | 296 | 296 |
| 7 | | 310 | 310 |
| 8 | | 326 | 326 |
| 9 | | 342 | 342 |
| 10 | | 359 | 359 |
| 11 | | 377 | 377 |
| 12 | | 396 | 396 |
| 13 | | 416 | 416 |
| 14 | | 437 | 437 |
| 15 | | 458 | 458 |
| 16 | | 481 | 481 |
| 17 | | 505 | 505 |
| 18 | | 531 | 531 |
| 19 | | 557 | 557 |
| 20 | | 585 | 585 |
| | | Total | 8,626 |

On the basis of above LCCA, the project life cycle cost for 20 years of project life cycle works out as INR 8,626/- Lakh:

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

13.5 RISK FACTORS AND MITIGATION

Environmental and social risk involved in construction and operational stage of the project including their mitigation measures are discussed and provided in detail in Chapter 9.0 above. Other minor risks foreseen at this stage of the project for successful implementation and execution of the project are provided as below:

- a) Dependency on inter-modality –

Integrated road transport connectivity is required for passenger ferry services.

13.6 NECESSITY OF GOVT. SUPPORT (VGF/PPP)

The guide lines were notified by the ministry of finance, department of economic affairs for financial support to infrastructure project that are to be undertaken through Public Private Partnerships (PPP).

Proposal is to be made under this scheme shall be considered for providing Viability Gap Funding (GAF), one time or deferred with the objective of making a PPP project commercially viable.

The proposal shall relate to a public private partnership (PPP) project which is based on a contract or concession agreement between a Government or statutory entity (Inland Waterways Authority of India) on the one side and a private sector company on the other side, for delivering an infrastructure service on payment of user charges.

This scheme will apply only if the contract/concession is awarded in favour of a private company in which 51% or more of the subscribed and paid up equity is owned and controlled by a private entity.

A private sector company shall be eligible for VGF only if it is selected on the basis of open competitive bidding and is responsible for financing, construction, maintenance and operation of the project during concession period.

The project should provide a service against payment of a predetermined tariff or user charge.

The proposal for seeking clearance of the Empowered Institution shall be sent (in six copies, both in hard and soft form) to the PPP cell of the Department of Economic Affairs in the prescribed format. The proposal should include copies of all project agreements (such as concession agreement, state support agreement etc.) and the project report.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

Once cleared by Empowered Institution, the project is eligible for financial support financial bids shall be invited by the concerned ministry, state Government or statutory entity, as the case may be, for the award of the project within four months of the approval of the Empowered Institution. This period may be extended by the Department of Economic Affairs.

The private sector company shall be selected through a transparent and open competitive bidding process. The criterion for bidding shall be the amount of VGF required by a private sector company where all other parameters are comparable.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

14.0 CONCLUSION

The viability of Island Water Transport project for introduction of navigation on any waterway should be judged, both technically and commercially. The technical viability of the project can be assessed based on availability of discharges to maintain navigable depth in a design channel suitable to ply design vessel and the availability of traffic (either existing or forecasted). The commercial viability of the project can be gauged based on its growth over the project period and return on investment made besides several others socio-economic benefits such as employment generation, poverty alleviation in rural areas and so on. The recommendation for implementation of the project is based on the trade-off between costs to be incurred and benefits derived.

On the basis of studies done in this DPR following conclusions are made:

- a) 4.0 Km stretch of Saptamukhi river from Dwarik Nagar (Chainage 15.0 Km) to Uttar Chandanpiri (Chainage 19.0 Km) lies in the Indo Bangladesh Waterway Protocol Route.
- b) By taking into advantage of tidal window, sufficient LAD is available in the complete 37.163 km stretch of waterway, which suggests that waterway, is viable for throughout the year navigation.
- c) Large cargo vessels and Oil tankers navigating along Indo Bangladesh Protocol Route uses Saptamukhi river from Dwarik Nagar to Uttar Chandanpiri.
- d) There are no big industries near the survey area, however a few brick kilns are found along the river banks.
- e) Saptamukhi river hinterland has no major cargo and passenger traffic of its own.
- f) Passenger ferry services are operated privately along the waterway, however, the services lack basic inland water transport infrastructure facilities for safe navigation, embarking and disembarking.

The waterway is proposed to be developed for Class VII, with pontoon and gangway facilities at 3 locations i.e. Haripur, Hajra and Dwariknagar ferry ghats. Facilities at Haripur and Hajira ferry ghats are proposed for crossing the river only and as such is recommended that all basic amenities of ferry services like parking, ticketing etc. shall be locally handled. Further, the facilities at Dwariknagar are proposed only to provide additional support to vessels plying along India Bangladesh protocol route. One ferry vessel is proposed for Saptamukhi waterway. The capital cost for development of the system components of the project viz., development of the designed waterway, construction of facilities for passenger ferry services and purchasing of vessels has been worked out as INR 749.30 Lakh with 1 vessel. Correspondingly O&M cost for Saptamukhi waterway works out to INR 220.53 Lakh.

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

The cost benefit analysis, calculations done for financial internal rate of return (FIRR) and Economic internal rate of return (EIRR) concludes that the project is not financially and economically viable.

However, as part of community development to provide safe and reliable water transport facilities for locals, the proposed project may be recommended for development by higher authorities. The Capital and O&M expenses estimated to be incurred for development of Saptamukhi waterway shall be considered as part of collective development of NW-97, Sunderbans waterways.

Moef&CC Letter

No. F.No.14-9/2016-IA-III
Government of India
Ministry of Environment, Forest and Climate Change
(Impact Assessment Division)

Indira Paryavaran Bhawan
Jor Bagh Road, Alliganj
New Delhi-110003

Dated: 21st December, 2017.

OFFICE MEMORANDUM

Subject: Non-requirement of environment clearance for maintenance dredging in rivers for the purpose of navigation - regarding.

This has reference to your Office Memorandum IWT-11011/88/2016-IWT-(Vol.III) dated 7th December 2017 on the above mentioned subject.

2. The minutes of the meeting held under chairmanship of Hon'ble Minister, Road Transport & Highways, Shipping and Water Resources, River Development & Ganga Rejuvenation held on 24.10.2017 concluded that as per the extant legal position, no prior EC is required for maintenance dredging for navigational channel for Inland Waterways.

3. In view of the above the Ministry of Shipping may like to go ahead with the decision taken during the meeting held under chairmanship of Hon'ble Minister, Road Transport & Highways, Shipping held on 24.10.2017 subject to the implementation of the environmental safety measures as enclosed as annexure.

4. This issues with the approval of the competent authority.

Sharath Kumar Palleria
Director

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

ANNEXURE

Environmental safety measures to be implemented

- i. 'Consent to Establish' and 'Consent to Operate' shall be obtained from State Pollution Control Board under the Air (Prevention and Control of Pollution) Act, 1981 and the Water (Prevention and Control of Pollution) Act, 1974.
- ii. The project authority shall ensure that no rivers or tributaries are blocked due to any activities at the project site and free flow of water is maintained.
- iii. Shoreline shall not be disturbed due to dumping. Periodical study on shore line changes shall be conducted and mitigation carried out, if necessary.
- iv. Dredging shall not be carried out during the fish/turtle breeding seasons.
- v. All vessels used in the river will be fitted with noise control and animal exclusion devices so that aquatic life is not unduly disturbed.
- vi. Spillage of fuel / engine oil and lubricants from the construction site are a source of organic pollution which impacts aquatic life, particularly benthos. This shall be prevented by suitable precautions and also by providing necessary mechanisms to trap the spillage.
- vii. Construction waste including debris shall be disposed safely in the designated areas and in no case shall be disposed in the aquatic environment.
- viii. Vessels shall not discharge oil or oily water such as oily bilge water containing more than 15 ppm of oil.
- ix. The project authority shall ensure that water traffic does not impact the aquatic wildlife sanctuaries that fall along the stretch of the river.
- x. All vessels will also have to comply with 'zero discharge' standards to prevent solid or liquid waste from flowing into the river and affecting its biodiversity.
- xi. The dredging shall be carried by integrated and systematic planning by selective grid method by allowing migratory movement of Benthic fauna.
- xii. All required Noise and vibration control measures are to be adopted in Dredgers. Cutter section Dredgers should be avoided as much as possible which produces more noise and vibration. No Drilling and Blasting is to be carried out.
- xiii. Pre geo-tectonic studies has to be completed and the strata to be dredged is predetermined with complete data pertaining to hardness, compressive and tensile strengths.
- xiv. Dredger type and other strata loosening methods shall be preconceived.
- xv. Slaggered dredging shall be carried based on turbidity monitoring to minimise the impact of turbidity.
- xvi. Threshold level of turbidity, which has a minimal effect on fauna, has to be predetermined and Dredging planned accordingly.
- xvii. Further silt screens needs to be used for minimising the spread of Turbidity.

Page 2 of 3

FINAL DETAILED PROJECT REPORT (DPR) OF NATIONAL WATERWAY NO. 97 (SUNDERBANS WATERWAYS) SAPTAMUKHI RIVER (37.163 KM)

- xviii. Disposal places of Dredged sediments needs to be predetermined, along the shore by assessment of suitability, which will not affect the shoreline (erosion) and also causing impacts during monsoon and flooding.
- xix. As much as possible, it shall not be disposed off in the river itself, and the site should be such that the dispersion is quicker by undertaking modelling studies.
- xx. Ballast water control and management measures shall be implemented.
- xxi. Waste and waste water reception facilities in Jetty shall be implemented.
- xxii. The Risk and Disaster management plan has been prepared in consonance with the manual of terminals and harbours issued by the Ministry of Environment and Forests dated 5th May 2010.
- xxiii. Standard Operating Procedures (SOP) and Emergency Response Plan (ERP) for onsite and offsite emergencies shall be prepared and implemented based on Hazard Identification and Risk Assessment to handle, process, store and transport of hazardous substances.
- xxiv. Oil spill contingency plan shall be prepared and part of DMP to tackle emergencies. The equipment and recovery of oil from a spill shall be assessed. Guidelines given in MARPOL and Shipping Acts for oil spill management shall be followed.
- xxv. No diversion of the natural course of the river shall be made without prior permission from the Ministry of Water resources.
- xxvi. All the erosion control measures shall be taken at water front facilities.
- xxvii. Necessary Air Pollution Control measures shall be taken during loading, unloading, handling, transport of the material at the berthing and water front facilities.
- xxviii. The Vessels shall comply the emission norms prescribed from time to time.
- xxix. All safety measures are to be implemented in coordination with the respective state government departments such as State Forest Department, Public Works Department, State Pollution Control Board etc.

Sharath Kumar Pallerla
Director
