The Authority has the principal objectives of development, maintenance and management of National Waterways in the country. The Kollam – Kottappuram stretch of West Coast Canal (168 kms.) with Champakkara Canal (14 kms.) and Udyogmandal canal (23 kms.) having a total length of 205 kms. has been declared as National Waterways No.3. IWAI is at the process of completion of developmental activities such as capital dredging, construction of terminals, navigational marks, protection of bank etc.

#### **2.0 BACKGROUND**

2.1 The National Waterway No.3 could be described as comprising of following distinctive stretches.

**(i) Kottappuram – Kollam stretch (181 kms.):-**

The Waterway passes through Periyar estuary, Thottapally river, Kochi Kayal, Pamba river, Thrikkunnappuzha lock, Vembanad Kayal, Thanneermukkom lock, Kayamkulam Kayal, Azheekkal Canal and Astamudi Kayal. Sweet water is maintained between Thanneermukkom lock and Thrikkunnappuzha lock, the other stretches contain brackish water.

**(ii) Udyogmandal Canal (23 kms.)**

The canal is a branch of Periyar river in tidal reach. The limits of the canal are Kochi Port area and Pathalam road bridge near Eloor.

**(iii) Champakkara Canal (14 kms.)**

This is a brackish water canal between Cochin Port and Ambalamugal industrial area.

2.2 The full development of National Waterway is proposed to be achieved in phases and also depending on the budgetary provisions available in Annual plans/Five year plan.

This waterway consists almost a continuous chain of back waters, lagoons, rivers and canals. The waterway from Kottappuram to Kollam runs almost parallel to the sea coast. Morphology and Hydrology of the canal vary from stretch to stretch depending upon the upland discharges as well as tidal variations. The least available depth is below 2 m in this stretch of waterway. The stretch of Champakkara Canal is from Kochi Port to Ambalamugal. The present minimum depth available in Champakkara Canal is above 2.2 m. The Udyogmandal Canal stretch is from Kochi Port to Udyogmandal with a width varying from 100 to 350 m and having above 2.2 m depth throughout the year.

The average water level variation in National Waterway No.3 is above 1 m. The velocity of flow is generally less than 0.5 m/sec. The minimum horizontal clearance available in the waterway is 9.2 m and minimum vertical clearance is 4.1m. The least available depth at Edappallikotta – Kollam stretch is 1.1 m.

Capital dredging at hard strata in Edappallikotta – Kollam stretch is being removed by Amphibian Dredger A.D. Manimala. Amphibian Dredger can operate similar to as Backhoe loader , as like Cutter Suction Dredger. When Amphibian Dredger removes the hard strata using its buckets of suitable size barge/Jangar with 200T capacity is necessary to receive the soil. Once the barge/Jangar is filled the same will be taken to unload it at IWAI's suitable location with the help of Backhoe loader . Unloading soil from Barge/Jankar would be done with the help of Backhoe loader. For disposing the soil from the water front location to a suitable dumping site if the soil is not standard form IWAI may require trucks (tipper lorry) assistance.

At present tender is invited to hire one barges/jangars of 150 T to 200 T and draft maximum 1.9m. Backhoe loader (1 no.), Truck (Tipper) one no. for assisting the operation of Amphibian Dredger while removing hard strata.
