SECTION-VI: TERMS OF REFERENCE (ToR)

1. Introduction

Inland Waterways Authority of India (IWAI) is a statutory body under the Ministry of Shipping, Government of India. IWAI was set up in 1986 with a mandate to develop and regulate the inland waterways of the country primarily declared as National Waterways. In March, 2016 Government of India has declared 106 new National Waterways in addition to the existing five National Waterways by the National Waterway Act, 2016.

The Scope of work shall cover all technical aspects of hydrographic survey at par with International Standards (IHO Standards S-44 5th edition, Special Order) including the following for development of the Water Aerodrome: -

The detailed hydrographic survey is to be carried out by using Automated Hydrographic Survey System (using digital Echo sounder for depth measurement, DGPS SBAS/Beacons Receivers for position fixing and Hypackmax or equivalent software for data logging).

2. Horizontal Control:-

The horizontal control is to be made from either one of the following methods: -

Positions should be referenced to a geocentric reference frame based on the International Terrestrial Reference Frame (ITRF) e.g. WGS84.

Transfer of positions from GTS Bench Marks or position established at bridges, barrages, Railway Stations etc.

Using High precision RTK DGPS in fix mode using UHF Radio Modem with IHO accuracy standards, with minimum 25 hours observations at some permanent platform/base.

The Survey to be conducted for special order as per IHO publication S -44, 5th edition standards.

The line planning, both the nature of riverbed in the area and the requirement of safe surface navigation have to be taken in account to ensure an adequate water floor search.

Horizontal Uncertainty: The uncertainty of a position is affected by many different parameters; the contributions of all such parameters to the total horizontal uncertainty (THU) should be accounted for. A statistical method, combining all uncertainty sources, for determining positioning uncertainty should be adopted. The position

uncertainty at the 95% confidence level should be recorded together with the survey data

The position of soundings, dangers, other significant submerged features, navigaids (fixed and floating), features significant to navigation, the coastline and topographical features should be determined such that the horizontal uncertainty meets the requirements specified in special publication 44.

Vertical control: -

The navigation of Aircraft requires accurate knowledge of the water depth in order to exploit safely the maximum passenger carrying capacity, and the maximum available water for safe navigation. The measured depths and drying heights shall be referenced to a vertical datum that is compatible with the products to be made or updated from the survey e.g. chart datum. Ideally this sounding datum should also be a well-defined vertical datum such as, LAT, MSL, a geocentric reference frame based on ITRS or a geodetic reference level.

Standard method shall be adopted for transfer of datum in rivers/canals. For tidal reaches standard transfer of datum as per Admiralty Manual shall be adopted.

Chart datum/ sounding datum already established by Port Authorities (Chart Datum), Central Water Commission (Average of last six years minimum Water Level) / State Irrigation Department and at their gauge stations along the river/canal.

By erection of tide gauges – at every 01 (one) km interval.

Vertical uncertainty is to be understood as the uncertainty of the reduced depths. In determining the vertical uncertainty the sources of individual uncertainties need to be quantified. All uncertainties should be combined statistically to obtain a total vertical uncertainty (TVU). The maximum allowable vertical uncertainty for reduced depths as set out in Special publication 44 (IHO standards) specifies the uncertainties to be achieved to meet special order of survey.

Check lines should be run at discrete intervals. These intervals should not normally be more than 15 times the spacing of the main sounding lines.

An appropriate assessment of the uncertainty of the depths at each incidence angle (within each beam for a MBES (if MBES is used)) should be made. If any of the depths

have unacceptable uncertainties, the related data should be excluded. A number of check lines should be run. Where adjacent swaths have a significant overlap the spacing between check lines may be extended.

Side scan sonar should not be used for depth measurement but to define areas requiring more detailed and accurate investigation.

Side scan swath coverage: - for complete in-sonification of the sea floor, 100 percent overlap is required. The full sea floor search required as per Special order 44 standards.

Agencies responsible for the survey quality are encouraged to develop uncertainty budgets for their own systems.

2.3 Other Terms of Reference for the survey work shall be as given below: -

2.3.1 BENCH MARK PILLARS

Construct Bench Mark Pillars of dimension 0.3mx0.3mx1.5m (0.6m above GL) RCC pillar with 6mm thick 50mm dia GI pipe inserted (as per construction drawing of Survey Pillar in the tender document). BM Pillars are to be connected to MSL and CD/SD. Detailed description of the bench mark along with its position and value to be given in the report for future recovery. If DGPS is used for transfer of level, only DGPS baseline method (Minimum 04 hours observation) to be used for transfer of level from the established bench mark pillar. The Raw data of the above to be submitted in Rinex format for reprocessing at IWAI office.

2.3.2 WATER LEVEL GAUGES

Water level gauges are to be erected at every 1 km interval along the canal/river. Readings are to be taken at 15 minute interval for the entire period of survey. Everyday check leveling records to be submitted with supporting photographs.

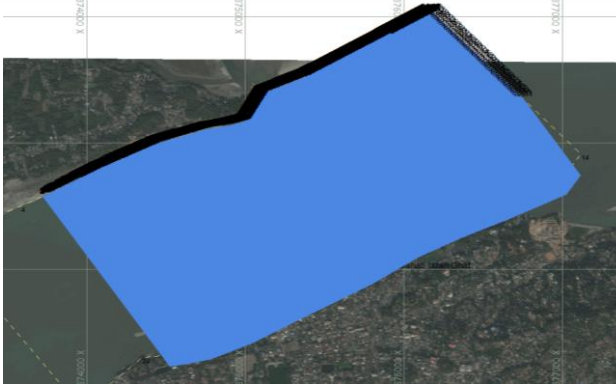

All the gauges shall be read simultaneously. Water level gauges are to be installed temporarily only during the survey period.

Soundings are to be reduced for datum of a gauge for 0.5 km length of the canal/river on both side of a gauge.
