TECHNICAL SPECIFICATIONS AND SPECIAL CONDITIONS

1.0 Background

Inland Waterways Authority of India (IWAI) is a statutory body set up in 1986 by an Act of Parliament (82 of 1985) under the Ministry of Shipping, Govt. of India. The Authority has the principal objectives of development, maintenance and management of National Waterways in the country. The overall development of National Waterway – 4 (NW-4) for shipping and navigation involves major works like land acquisition for widening of channel and construction of IWT Terminals, development of required navigational channel by dredging, marking the channel with suitable day and night navigational marks, protecting the banks with suitable methods for preventing bank erosion, construction of terminals for loading and unloading of cargo and modification of navigational locks.

2.0 Project Description

2.1 The project as tendered is the dredging operation by dredgers are to be deployed in the stretch between Harischandrapur Village (i.e. 20 km chainage U/S of Praksham Barrage) on river Krishna at Vijayawada to Muktyala (D/s of Pullichintala dam at chainage 87 km.). The dredging operation is to be conducted for developing a navigable channel as per the dimension already indicated under clause no. 3.5 for the purpose of Shipping & navigation as indicated necessary.

2.2 M/s Tojo Vikas International Pvt.Ltd has conducted detailed hydrographic survey in the stretch and shoals were identified and dredging quantity has been worked out based on Bed width of 45 m, Depth 2.2 m below chart datum and side slope of 1:5 and submitted a detailed survey report. As per this, the dredging quantity was estimated at 2.90 million Cu.m for the stretch. One set of above detailed hydrographic survey charts shall be provided to the successful contractor. However, a schematic drawing on the dredging site is attached for ready reference.

2.3 The dredging is proposed to be executed by deploying suitable size capacity and type of cutter suction dredgers along with adequate length of both floating & shore pipeline as considered at different locations

3.0 Technical Specifications for Dredging Work:-

3.1 The material to be dredged as per the soil testing carried out during DPR at few locations is of sand, silt, coarse sand and admixture of compact and at number of locations. Precaution need to be taken for dredging and accordingly its disposal taking into environmental aspect.

3.2 During the course of dredging if any hard strata/hard patches or boulders/debris are encountered and it is not feasible to continue the dredging with the normal course with conventional dredger, at the initial stage attempts may be made in the presence of EIC to establish the availability of such patches. Assessment of condition of the bed may be made by conducting borehole test for establishing the hardness at the contractor's cost in the presence of IWAI's representative. On the finding of the existence of hard strata, the contractor may submit a proposal to EIC for further step to be taken with respect to the mobilization of high powered special dredger/equipment for such purpose, rate and additional time etc. After detailed examination, IWAI may take a decision in this regard for execution.

3.3 Materials dredged may be disposed on to the flanks of the waterway or on to the low-lying area ashore or on the banks as directed by EIC. The disposal shall be made at an appropriate place by increasing the pipe length up to a maximum length not more than 500m, as directed by the Engineer-in-Charge.

3.4 The disposal/dumping area or site for the dredged spoil and material shall be identified by contractor in consultation with EIC, State irrigation department – identification and arrangement of the dumping site (s) shall be the sole responsibility of the tenderer for which any expenditure if required shall be included in the tender cost. The dumping is to be carried out within the area identified and demarcated as per the instruction of EIC. The expenditure, if required for dumping without flooding and effecting the nearby land /houses/establishment shall be incurred by the contractor, including construction of temporary bunds and protection.

3.5 The waterway shall be dredged to obtain a channel of 45 m bottom width with 1:5 slope and maintain minimum of 2.2 m depth below chart datum throughout.

3.6 The tolerance allowable in width shall be +1m on each side from C/L of channel and that in depth +10 cms from the specified depth. Depth could exceed up to 10cms beyond the specified minimum depth for which payment will be made. Quantities on account of depth exceeding +10 cms and width exceeding the specified tolerance limit will not be considered for payment. In any stretch of dredged channel, if the depth or width is less than the specified limits, the E-I-C will examine the shortcomings keeping in view the navigational requirements and his decision to accept the work done or to order re-dredging of the channel shall be final and binding on the contractor.

3.7 The area to be dredged shall be indicated by the Authority based on hydrographic survey charts. Pre and post dredging surveys shall be carried out by the contractor under the supervision of E-I-C or his nominee. The cross-sections shall be 10m apart and soundings shall be taken continuously and plotted at 4m interval on the cross-section lines. The cross-section shall be 100m wide. The survey charts for the detail survey carried out during 2014-2015 for the stretch shall be handed over only to the successful bidders to their respective stretches for information and planning of the work.

3.10 Actual quantity dredged including allowable tolerance in the waterway shall be assessed based on the joint pre and post dredging surveys. The quantity in slopes up to a maximum of 1 in 5.0 shall be worked out with allowable tolerance limits. Area of cross-section shall be computed by using Simpson's Rule and these cross-sectional areas shall be used in trapezoidal rule to arrive at volume dredged. The areas shall be computed by a combination of Simpson's rule and average method in case the width of channel is not suitable for direct application of Simpson's rule for full

width. This aspect is to be decided by the E-I-C. The computation of dredging quantity may also be considered & allowed by computer with proven software.

3.11 The scale of pre and post dredging surveys should be 1:500 and the contractor shall prepare and submit the survey charts (3 sets + original) and soft copy and digital survey data in DVD along with the R.A. Bills. If the length of shoal to be dredged is found to be more than 500m, charts/bills can be prepared and submitted for a minimum dredged length of 500m.

In case the contractor delays by more than once, LD will be applied @1.5% on the whole contract value per month to be computed on per day basis as per LD clause.

4.5 No idle time charges will be paid to the contractor on any account.

4.6 The contractor shall arrange the transits, buoys, lights, mooring etc. at their own cost as required for dredging and also for cautioning other vessels in the waterway.
